INTRODUCTION.

—:o:—

Past and Present Census.

THERE have been four Enumerations of the Gwalior State on 17th February 1881, 26th February 1891, the 1st March 1901 and the 10th March 1911.

All the four Enumerations were synchronous with those taken in British India.

1881

The Census of 1881 was the first systematic attempt to enumerate the population of the Gwalior State. The undertaking was one which presented many difficulties. The State has no geographical homogeneity and may be described as two irregular and detached tracts of territory. Ethnologically also they comprise many divers elements. The administration of some of the detached portions of the territory, situated at a distance from the chief controlling authority was, in these days, less efficient than at present. Great trouble was met with in taking the Census of the wilder tracts, among the Bhils and Bhilalas of the Malwa Prant and the Saharias, Kirars, Minas and other tribes in the Gwalior Prant. These primitive tribes were very apprehensive of evil results and the Census was little more than an estimate. Internal communication was poor and the process of taking the Census was unfamiliar to them.

1891

The next Census of 1891 was carried out more systematically. An officer of high standing was appointed Census Commissioner for the State with a special officer for the immediate control of the Malwa Prant. The arrangement was most suitable and facilitated the work. The Council of Regency which was then carrying on the administration of the State, was also able to obtain more competent assistance from officials. All important statistics were collected and the results compiled for the State as a whole and by Political charges.

In these two Enumerations a Census form different from the British India Schedule was used and information on the following points only was collected:—

(1) Number, (2) Name, (3) Religion, (4) Sex, (5) Age, (6) Caste, (7) Birthplace, (8) Occupation.

1901

Since 1901 the British India Schedule of 16 columns has been exactly followed. In 1901 the results were embodied in a separate State Report, the first of its kind, on the model of those published for other Provinces and States, the Gwalior Volume forming one of the Imperial Series.

1911

The present Census which was taken on the night of the 10th March 1911, is thus the second in which information similar to that in British India has been collected. The date fixed was chosen as the moon's light was such as to enable the Enumerators to complete their rounds before it became dark. There were no important fairs, religious assemblages or marriage festivals to disturb the population or attract people away from their houses on a large scale.

Arrangement for the Enumeration.

A detailed account of the method adopted of taking the Census and compiling the results will be found in the Central India Administrative Report on the Census. A brief summary of the important features connected with the operation is given below.

Appointment of the Chief Census Officer.

As soon as it was known that a decennial would be taken, the Darbar appointed Mr. J. W. D. Johnstone, C. I. E., Inspector-General of Education, to be the Census Commissioner for the State with Rai Bahadur Munshi Balmukand, Sarsuba of the Malwa Prant, in immediate charge of the Census in that part. The appointment of Mr. Johnstone, who had conducted the previous enumeration and compiled the report for 1901, greatly facilitated the work.

Preliminary Census Work.

The first step taken was the preparation of the General Village Register for the whole State. This was written up by June 1910 on a model form supplied by the Provincial Superintendent of Census. All hamlets (Mazras, Dakhli Khedas) were included in the parent village and the Census agency was nominated.

The State Census office was opened on 1st April 1910 and detailed instructions were issued.

Mr. Johnstone received all Census circulars from the Census Commissioner for India direct and also the circulars issued by the Provincial Superintendent of Census.

Census Procedure Code.

Following the system of 1901 the Provincial Superintendent of Census made a ***provisional*** issue of the first part of the Code of Census Procedure for the Agency containing instructions for the taking of the Census.

A Manual of Instructions for Charge Superintendents and Supervisors and a Specimen Enumeration Book containing instructions to the Enumerators were also issued. All these were translated into Hindi and Urdu.

Thus each Charge Superintendent, Supervisor and Enumerator was in possession of all instructions for his guidance and ready reference.

Census Divisions.

The Census Divisions, designated as Blocks, Circles and Charges were then formed. Each Block was entrusted to an Enumerator, who was generally a Patwari, a School or Post master, Police-man, a senior student, a Zamindar, a Shopkeeper or a clerk. A group of 10 or 15 Blocks formed a Circle and was placed in charge of a Supervisor, who was usually a senior Patwari, a Circle Inspector, a Kanungo, a School master, a Subordinate Revenue, Judicial, Police, Forest, Customs, etc., official, a pleader or the like. Ten or fifteen Circles, or a Pargana, the sub-division of a Pargana, a Tappa, a town or its sub-division formed a Charge and was placed under the Kamasdar, Naib Kamasdar, Magistrate, etc., called the Charge Superintendent.

The City of Lashkar and Ujjain town were made into special Census units under Professor Jankinath Datta, B.A., of the Victoria College, and Pandit Vishnu Gangadhar Gokhle, the Municipal Secretary, Ujjain, respectively.

The Blocks numbered 20,598, Circles 1,763 and the Charges 91, each Block containing on an average 32 houses, a Circle 375 and a Charge 7,267. The maximum number in a Charge, Circle and Block was 28,617 (Bhind), 8,214 (Mastura), and 85 (Khachrod), respectively, the minimum being 139 (Amalda Balapur) and 33 (Bahadurpur).

House Numbering.

The houses were then numbered. The definition of a house given in 1901 was altered to make it more explicit and illustrated by diagrams. Each house was given a separate number. The numbering ran in a consecutive series for each village, a division of a town, military station, &c., to avoid the mistake of double numbering the same premises and to guide the Enumerator.

The houses of signalmen, gatemen and gangmen living outside the distant signal of a Railway Station were included in one of the Blocks of the nearest village or ward of the town, even if they were situated within the Railway fencing.

Three numbers were given to a house, shewing Circle, Block and House $\frac{1}{8}$. In many cases, however, $\frac{3}{4}$ only the indicator or houses at the beginning and end of Blocks were so marked. The commencement of a Block was indicated by a triangle and its termination by a circle 
The top number indicated the Circle number, the middle number the Block, and the lowest the House.

When all the houses had been numbered a statement shewing the number of houses was prepared and an indent for the requisite number of Census forms made out and sent to the Provincial Superintendent of Census at Indore. The work of House-numbering was begun in villages on the 15th October and generally completed by 15th November 1910. But, in certain areas, chiefly those affected with plague, the start could not be made till the end of October. The Provincial Superintendent of Census, when he visited the villages of the Mandasor and Nahargarh Parganas, found that the houses had been left unnumbered. Urgent orders were issued and the numbering was completed by the middle of December.

As the Diwali festival intervened a proclamation was issued warning people to preserve the numbers and in cases in which they were accidently obliterated, limped or white-washed, to report the fact and have them replaced without delay.

Instruction. Training Class.

A conference of all Census Officials was held at Indore under the presidency of the Provincial Superintendent of Census in May 1910 where Munshi Haq Dad Khan, Personal Assistant to Mr. Johnstone, was deputed to receive practical and theoretical training in the work of taking the Census. The Census Code, the Manual of Instructions for Charge Superintendents and Supervisors and Instructions to Enumerators on the cover of the Enumeration Book were read through both in English, Hindi and Urdu, and all doubtful points were satisfactorily explained and settled. Later on, a Supervisor from each Malwa Pargana, the Municipal Secretary of Ujjain town with three Supervisors and the Head Clerk of the Malwa Census Office were called in to receive training.

On return to Lashkar, Munshi Haq Dad Khan opened a training school where two Supervisors from each Charge and a certain number of Enumerators were given instruction. A part of the Lashkar City was formed into a Charge, divided into Circles and Blocks and all officials present were taken round and made to fill up particulars for houses. They in their turn opened similar classes at convenient centres in their Charge.

In Malwa the Census Head Clerk, Pandit Hari Trimbak Joshi, was deputed to each Pargana headquarters to give practical training to all concerned. He collected all Supervisors and Enumerators and in the presence of the Charge Superintendent read the Code, the Manual and the Instructions on the cover of the Enumeration Book, took them round to make entries for a few houses and encouraged them to discuss all doubtful points.

Census Calendar.

Operations were controlled by a Calendar issued by the Provincial Superintendent of Census which was generally followed.

Maps.

Census maps for Charges and Circles were prepared and supplied to all concerned. Orders have been issued for the preservation of these maps for use in the next Census.

Circle Lists.

After the Census divisions were finally determined, the Circle Lists and Circle Registers were prepared by the Charge Superintendents and Supervisors.

Supply of Census Forms.

Covers, General Schedules, Block and House Lists according to the indents sent in were received direct from the Newal Kishore Press, Lucknow, under instructions from the Provincial Superintendent of Census and supplied to the Charge Superintendents. They were supplied at the rate of 110 Covers and Block Lists for 100 Blocks and 50 General Schedules for 100 houses.

The statement showing the number of forms supplied and used in the State as a whole will be found in Appendix I.

Details showing the allotment of each Charge will be found in Appendix II, at the end of the text.

Special Enumeration Books.

For His Highness the Maharaja and his household, and a limited number of Sardars Special Enumeration Books were issued. These were identical with the ordinary books except that the covers were superscribed in bold red letters with the word "Special."

Travellers' Tickets.

All travellers who had been enumerated but travelled on the Census night were given Travellers' Tickets in vernacular, which prevented double Enumeration :—

रियासत ग्वालियार
मर्दुमशुमारी १९११
शुमार किया गया.
मुक़ाम तारीख़

Transfer of Officers.

To minimise the trouble often occasioned in carrying through Census operations all transfers among officers charged with the Census work, were avoided as far as possible between 1st January and 15th March.

Special Arrangements.

Railways.—The Census of persons residing within Railway premises, whether on open lines or lines under construction, was carried out by the Railway Census Officers.

Fair or Religious Assemblages.—No important fairs or assemblages took place necessitating the formation of special charges.

Carters and Travellers by Road.—These were stopped at sunset at road-side police stations and censused, a Traveller's Ticket being given to each person to avoid double Enumeration.

Wandering Tribes.—The camps of these tribes were kept stationary for three days before 10th March at a convenient place.

Census Act or Regulation.

In the preliminary Circular the obligations of all public servants and loyal subjects to assist in the taking of the Census was made known. No necessity arose for a regular Census Act though certain executive rules were framed for the punishment of wilful opposition. All concerned cordially helped in the operations.

Public Attitude.

There was no opposition or objection made anywhere. Even the most backward and wild sections of the population such as Bhils, Saharias, Kirars, etc., have now become familiar with the object for which the Census is being taken. These tribes gladly replied to whatever was asked of them.

Preliminary Enumeration.

The next step taken was the preparation of the Preliminary Record, *i. e.*, the entry in the Enumeration Schedules of all the particulars of persons ordinarily resident in each house. The information was recorded on 12 points. 1 Name, 2 Religion, 3 Sex, 4 Civil Condition, 5 Age, 6 Caste, 7 Occupation, 8 Birthplace, 9 Language spoken, 10 Literacy, 11 Knowledge of English, 12 Certain Infirmities. The Preliminary Record was prepared in the districts between the 15th January and 15th February. In towns it was carried out between 15th February and 1st March. The interval between the completion of this record and the Census day was utilised by the Charge Superintendents and Supervisors in checking and correcting the entries.

Closing of Public Offices and Institutions.

To allow all officials who could be spared to assist in the Final Enumeration and expedite compilation of Provisional Totals, all public offices and institutions were either closed on 10th and 11th March or such men as were charged with Census work were granted leave.

Warning to the Public before Final Census.

After the completion of the Preliminary Record, town and village dwellers were warned to remain in their houses on the night of 10th March 1911 until the Enumerator had visited them, to give all particulars asked for, being careful to mention all persons who had been enumerated in the preliminary Enumeration but had since left or died and supply particulars for all new comers or newly born children. This notice among the jungle tribe was circulated by the headmen of the community wherever the final Enumeration was carried out by day on 10th March.

To secure reasonable expedition and minimise trouble to the Enumerator in towns, two warning guns were ordered to be fired on the night of 10th

March, the first as a warning to the public to be in their houses and the officials to stop traffic on road and the other, after ten minutes, to indicate the commencement of the final counting.

Plague.

After the final house-numbering had been made, Plague broke out in Lashkar, Lashkar Brigade, Gwalior and Morar, which seriously interfered with the Preliminary and Final Enumeration. It was absolutely impossible to number camps with the same numbers as those of the houses vacated, as the camps were very scattered. They were constituted into separate Blocks and Circles, the Enumeration Books being added to those of the Charge in which the camps were situated. Much trouble also arose owing to the absence of the trained staff and many new Enumerators and Supervisors had to be trained, specially for the Final Census. His Highness the Maharaja very kindly placed the services of the Non-Commissioned Officers and men of the State forces at the disposal of the Census authorities, and this saved the situation.

Recount.—Places affected with Plague at the time of the Final Enumeration, were recounted on the 8th July 1911 and the result is shewn on the flyleaf of Table IV.

Final Enumeration.

In the Census proper each Enumerator went round his Block after sunset with the Enumeration Book in his hand and pen and ink, checking and correcting the entries made in the Preliminary Enumeration so as to record the actual facts existing on the Census night, striking out the entries for persons who had left or died and recording information in the different columns of the Schedules for all new comers or newly born children. It was commenced at 7 P. M. and completed at midnight. Charge Superintendents and Circle Supervisors moved about as much as possible through their jurisdiction on the Census date as well as while the Final Enumeration was going on. The officials and public in practically every case gave all the assistance possible, their loyal co-operation materially assisting in the success of the work.

Provisional Totals.

On the morning of the 11th March all Enumerators and Supervisors met at places previously settled and added up their totals. The Enumerators prepared the abstract at the end of the Enumeration Book shewing the number of occupied houses and of persons, males and females, in their Blocks. These abstracts after being checked by a second Enumerator were posted by the Supervisor in a summary for his Circle. The Circle summaries after arrival at the Charge Superintendents' headquarters were similarly checked and then posted up in the Charge summary. The figures of these Charge summaries were telegraphed to the Census Commissioner at Lashkar followed by the Charge summaries by the first post. The figures of all Charge summaries were added up in the Census Commissioner's office by a special staff to form the State Totals. These were wired to the Census Commissioner for India and to the Provincial Superintendent at Indore. Owing to the carelessness of the Charge Superintendent at Sonkatch, however, the totals for the whole State could not be telegraphed before the 15th March.

According to the Provisional Totals the population of the Gwalior State, excluding the areas occupied by guaranteed holders, British Cantonments, Stations and Railways, amounted to 3,093,687 consisting of 1,624,427 males and 1,469,260 females.

Final Totals.

The Final Totals made up after abstraction and tabulation showed a population of 3,096,860 consisting 1,627,072 males and 1,469,788 females. This showed an increase of 3,173 being a difference of 10 per 10,000, a result which might well have been improved on.

Special Industrial Schedules.

A special Census was taken of persons employed in industries in which the workers in factories were not less than 20 persons. This was taken simultaneously with Census of the general population on March 10, in order to collect correct information regarding recent developments. The form for this special Schedule issued by the Provincial Superintendent of Census, was distributed on March 5, 1911, to the Owners, Agents and Managers of Factories and Works through the departmental heads and collected on the morning of the 16th March 1911 to obviate all danger of confusion with the ordinary Schedules. The results of these have been embodied in Central India Table XV-E.

Certificates of Merit (Sanads).

For good services rendered in the taking of the Census, certificates were granted. Enumerators and Supervisors received these from the State Census Commissioner, the Charge Superintendents from the Provincial Superintendent of Census, while the Census Officer for the Malwa Prant obtained one, bearing the signature of the Hon'ble the Agent to the Governor-General in Central India.

Despatch of Enumeration Books.

After the despatch of the Provisional Totals the Enumeration Books were packed by charges and other units and sent with Charge and Circle Summaries, for the subsequent processes of abstraction and tabulation, to the Central India Agency Central Office at Indore. Pandit Gangadhar Ganesh Joshi was sent as Deputy Superintendent to control the work under the direction of the Provincial Superintendent of Census.

Code of Abstraction, Sorting and Tabulating.

The instructions of the Census Commissioner for India for copying out slips, for sorting the written up slips and for tabulating and compiling the results, were followed strictly in all processes. The Provincial Superintendent of Census and the Head Clerk in the course of their daily rounds of inspection gave such supplementary instructions as were required.

Examination of Enumeration Books.

As a Preliminary to slip-copying the Schedule entries were carefully examined as a check on the Provisional Totals. It has unfortunately to be noted that the Schedules of many Parganas were written up very badly and shewed gross carelessness and indifference to orders. This necessitated the employment of a very large special staff of Examiners who read through and rectified all obvious errors and omissions in the books. It is to be hoped that this will not recur in 1921.

Establishment.

The whole work of abstraction, sorting, tabulating and compiling of the Tables was done at Indore instead of, as in 1901, at Lashkar. Of the staff

employed only a few officials were sent from the State. A statement showing the number of clerks employed and rates of pay is given in Appendix III.

Each gang during the slip-copying period was composed of 10 or 12 slip-copyists, two checkers and one Supervisor. In sorting 15 sorters and one Supervisor formed a gang, while in tabulating, only selected experts were retained. The final checking was done by Pandit Gangadhar Ganesh Joshi and Hari Trimbak Joshi, each taking the Gwalior and Malwa Prant, respectively.

Furniture and Stationery.

A simple set of 36 pigeon holes was given to each slip-copyist or a sorter. Each hole measured 3" × 5" and was 4" deep. In these, blank slips were kept when copying and afterwards written slips were sorted the result of which was entered in the sorters' tickets. Canvas bags, used for exporting grain, were given to the men to sit on. Deal wood tables and boxes were provided for Supervisors and Checkers while a few chairs were hired for the Supervisors.

Printed sorters' tickets, tabulation registers and lead pencils were supplied from the Central Office.

Tables.

Register A, written up by the Supervisor during the slip-copying, formed the basis for the village list and supplied figures for Tables I—VI but sorting was required from Table VII onwards. A Circle constituted a unit for sorting. When a complete Pargana was sorted the result was put down in a register. All such registers were combined to give the Zila totals.

Tables I—VI have been compiled by Parganas and the remainder by Zilas for the State as a whole.

All tables, obligatory and optional, have been compiled.

Report.

This is the second Report on the Census of the Gwalior State, the first being published in 1901 on the lines of a British Province.

The present Report is similar to that of 1901 except that the Text and Tables are included in one Volume, while the Village List has been printed separately. It has been divided into three parts—Part I deals with Report, Part II contains all statistical Tables and Part III, separately bound, gives a complete list of villages.

The Tables give statistics for the whole State subdivided into two sections, 1. *State proper, i. e.*, the area under the *immediate* control of the Darbar and censused by them ; 2. *the State as a whole, i.e.*, including guaranteed holdings and other alienated areas censused by the Political authorities.

It was found necessary for special officials to visit all Pargana head-quarters and verify the correct names of villages, these being most confused in the various departmental returns.

The printing of the Report was very well done at the New Electric Alijah Darbar Press, Lashkar.

Cost.

The accounts have not yet been finally made up as the printing is still going on. The total expenditure up to date amounting to Rs. 34,291-8-8 may, however, be taken for all practical purposes. This works up to two pies per head of population. Compared with 1901 the expenditure has been reduced by Rs. 20,708-7-4.

Suggestions for future Census.

The arrangement made for the Census of 1911 was rather wanting in that close supervision which a Census demands. There was a great lack of control in the districts and consequently made indifferent work. To facilitate work on a future occasion I suggest that the territory should be divided for Census purposes into two units, *viz.*, Gwalior Prant and Malwa Prant. Each Prant must have a separate Assistant Census Commissioner with requisite establishment for immediate control of all the operations, who will act under the general supervision of the Census Commissioner. The Assistant Commissioners should be senior officers selected with special reference to their local knowledge of the country and its people, should not be too old, but active, intelligent, able to ride and well educated so as to be able to understand the instructions and themselves impart training in the local vernaculars. The instructions issued from the Provincial Superintendent of Census would be sent to the Census Commissioner of the State and also separately to the Assistant Commissioners direct, to avoid delay. This arrangement will ensure that instructions reach all concerned well up-to-date. The Assistant Commissioner for Gwalior Prant being at headquarters will, of course, find it easy to keep up-to-date; while Assistant Commissioner for Malwa Prant with headquarters at Ujjain being near the Provincial Superintendent at Indore can be more easily instructed from the Office there and visit Indore to consult the Census Superintendent when in difficulties. Apart from the above facts, Malwa is quite separate from Northern Gwalior and requires separate treatment. The Assistant Commissioner for Malwa would keep the State Census Commissioner fully informed of all action taken and submit a weekly diary to him at Lashkar. In so large a State as Gwalior the delegation of powers is essential to save time and facilitate work. The Assistant Commissioner must also have certain discretionary powers in petty matters such as the deputation of special officials to visit and inspect certain areas. I would, therefore, suggest that the Census Budget be prepared in two sections, with a separate allotment for each Prant, that for Malwa being under the control of the Assistant Commissioner for that tract. This will relieve the Census Commissioner of much unnecessary trouble, in references on petty matters, which only mean delay.

The appointment of the Inspector-General of Education as Census Commissioner is decidedly the best arrangement, but as it is impossible for any one man to tour thoroughly throughout the length and breadth of the State in the way a Census requires, the necessity of appointing these Assistant Commissioners is imperative.

Acknowledgments.

The Enumeration from beginning to end was carried out by Mr. Johnstone, C. I. E., to whom, as in 1901, I am very much indebted for his ever ready assistance and co-operation. I would express my thanks also to

Rai Bahadur Munshi Balmukand, Sarsuba of the Malwa Prant, who was ex-officio in-charge of Census arrangements in Malwa.

The Charge Superintendents who did good work received Certificates of Merit or Sanads. Of these those mentioned below deserve special mention for the zeal with which they carried out the Enumeration :—

1. Babu Jankinath Dutt, B. A., Professor, Victoria College.
2. Pandit Pandurang Rao, Suba of Isagarh.
3. Pandit Vyankat Rao Ramkrishna, Suba of Amjhera.
4. Pandit Munna Lal Misra, M. A., Tahsildar of Shajapur.
5. Pandit Wasudeo Rao, Tahsildar of Agar.
6. Mohammad Akhtar, Tahsildar of Bakaner.
7. Syed Manzur Ali, Tahsildar of Singoli.
8. Pandit Sital Prasad, Tahsildar of Pohri.

Munshi Haq Dad Khan, Personal Assistant to the Census Commissioner, was very energetic in imparting instruction to the Census officials in the Gwalior Prant and was of great assistance in setting matters right, when I found that the progress in certain districts was backward owing to the presence of Plague.

Pandit Gangadhar Ganesh Joshi, Deputy Superintendent, controlled the abstraction and tabulation office most efficiently. He and Pandit Hari Trimbak Joshi prepared all the final Tables and compiled the Subsidiary Tables for the Report. The energy and zeal with which they worked is most praise-worthy. They are now employed in revising the list of villages for the State, a most complicated and difficult undertaking in this State where there are so many important Jagirdars and Guaranteed Thakurs. The task was rendered the more difficult as most of the lists of villages maintained in the Tahsils and Land Records do not tally. I, therefore, trust that the Darbar will consider their exceptionally good services in this connection.

The writing and issue of the Report, owing to my being placed on duty elsewhere, devolved on Mr. H. M. Bull, Inspector-General of Education, to whom I am indebted for undertaking this work in addition to all his own duties.

My thanks are also due to Mr. W. B. Cockburn, Superintendent of the Electric Alijah Darbar Press, for supplying quite clear proofs of the elaborate tables.

C. E. LUARD, Major,
Superintendent of Census,
Operations in C. I.

CHAPTER 1.

DISTRIBUTION OF THE POPULATION.

Introductory.

IN the scheme of Political divisions under which the different parts of India are grouped the Gwalior State is included in the Central India Agency. This is purely a Political and not a natural division. Of the States comprised in this Agency, Gwalior is by far the largest. It is also historically much the most important.

Area and division of the State.

To quote from the State Gazetteer. "The State which has an area of 25,041 square miles—comparable to that of Greece—is composed of several detached blocks, but may be roughly divided into two great sections, the Gwalior (or Northern) and the Malwa section. A small isolated *Pargana* called Gangapur with an area of 26 square miles lies in Rajputana." The Northern section consists of a more or less compact block with an area of over 17,000 square miles. For the boundaries of this portion of the State reference should be made to the map. A recital of the various States of Rajputana or of Central India or again of the various districts of British India which adjoin the State conveys but little.

"The Malwa section," to quote again from the indispensable Gazetteer, "is made up of several detached districts between each of which portions of other States are interposed, and which are themselves intermingled in bewildering intricacy. This section has an area of 8,021 square miles. In the Malwa section is included, for administrative purposes, the Amjhera *Zila*, which lies, however, mainly out of Malwa, in the Vindhyan region."

Variation in area since 1901.

During the intercensal period the figures for the area of the State have risen from 25,041 to 25,130 square miles. This is due to the inclusion in the State area of the *Thikanas* of Maksudangarh and Kamalpur which have lapsed and to the inclusion also of the Gwalior Residency villages reverted to the Darbar.

Natural Divisions.

The three natural divisions of Lowlying, Plateau and Hilly Tracts adopted on this occasion are the same as those made use of in the report on the Census of 1901.

Areas of Natural Divisions and Population.

These natural divisions are fairly well marked and the characteristic features of one division do not overlap upon those of another to any serious extent. The distinctive features of each division were well described in the report on the last Census and need not be repeated here.

The areas of these three natural divisions are given in Table I in an extra column as 7,796·05, 15,032·51, and 1,301·44 square miles for Lowlying, Plateau and Hilly Tract, respectively. The population of each division taken in the same order is 1,213,524, 1,768,575 and 119,775 persons, respectively.

Population of State Proper and of the State.

These figures if added give the total population of the State proper, *viz.*, 3,101,874 persons. If, however, the population of guaranteed estates

and British cantonments within the confines of the State be included the population rises to 3,236,753 persons for an increased area of 25,862·55 square miles. Detailed figures for the guaranteed estates and British cantonments are given in Appendix to Table I. There is nothing very noteworthy in them.

Density of the Population for the State Proper and Natural Divisions,

Subsidiary Table I at the end of this Chapter shows the mean density of the population per square mile, together with statistics relating to cultivation. The mean density per square mile in 1911 was 123 persons as compared with 117 in 1901, 135 in 1891 and 120 in 1881 if we deal with the figures for the whole of the State proper. Taking the three natural divisions of Lowlying, Plateau and Hilly Ground we get 156, 110 and 92 persons to the square mile respectively.

Zilas, Parganas and Density by Zilas.

Politically the State is divided into eleven *Zilas* which are again subdivided in thirty-nine *Parganas*. These divisions have been made during the intercensal period. The number of *Zilas* in 1901 was 19 which during the intercensal period has been reduced to 11 by the amalgamation of the abolished *Zilas* with the contiguous one. The same case is with the *Parganas*, but as the *Pargana* figures were not dealt with in the last report the changes therein are not noteworthy. The changes in *Zilas* noted below give a rough idea of the amalgamation :—

Zilas in 1901.		*Zilas in 1911.*
1. Gird Gwalior 2. Susera 3. Bhandair	...	... 1. Gird.
4. Tawarghar 5. Sikarwari 6. Sabalgarh	...	... 2. Tonwarghar.
7. Sheopur	...	... 3. Sheopur.
8. Bhind Bhandair	...	... 4. Bhind.
9. Narwar 10. Pichhore	...	... 5. Narwar.
11. Isagarh 12. Bajrangarh	...	... 6. Isagarh.
13. Bhilsa	...	... 7. Bhilsa.
14. Ujjain	...	... 8. Ujjain.
15. Shajapur 16. Agar	...	... 9. Shajapur.
17. Mandsaur 18. Neemuch	...	... 10. Mandasor.
19. Amjhera	...	... 11. Amjhera.

To compare the population of *Zilas* in 1901 with that of 1911, adjustment of figures had to be made and thus it became a tedious task, especially in adjusting the population of several villages transferred from one *Pargana* to another, larger the number greater the difficulty.

As no change is likely to be made in their number or area I shall treat of the density of certain *Zilas* at some length as such treatment may be useful to the State for purposes of comparison in later years. The largest *Zilas* are Narwar (3,762·74 square miles) and Isagarh (3,760·98 square miles). The smallest *Zila* is Amjhera with an area of only 1,301·44 square miles. As regards population Narwar heads the list with 408,129 persons but Isagarh is not so near it in population as it is in area having only 333,169 inhabitants and thus yielding place to Bhind (399,519) and Tonwarghar (376,659). As is to be expected from its smaller area and hilly features Amjhera is the least populous *Zila* with only 119,775 inhabitants. As regards density Bhind is easily first of the *Zilas* with 233 persons to the square mile, the two adjoining *Zilas* of Tonwarghar and Gird Gwalior coming next with density figures of 188 and 183 respectively.

By far the lowest of the *Zilas* as regards mean density is the jungle covered *Zila* of Sheopur with only 53 persons to the square mile. Isagarh (89) and Amjhera (92) come next. No other *Zila* has under 100 persons to the square mile.

Comparison of figures for density of the State and Natural Divisions with the figures for Central India.

A density of 123 persons to the square mile, the figure for the whole State, means something well over 5 acres per person. It is no good to compare such a figure with such figures as 618 persons to the square mile, the figure for England and Wales at the last census or with those of such an Indian State as Cochin with 675 persons to the square mile. Such favoured spots are not periodically visited by famine. The figure for the State may be compared with that of Central India as a whole which latter figure is 121 to the square mile.

As regards density of natural divisions Gwalior compares with the whole of Central India as follows:—

	GWALIOR.	CENTRAL INDIA.
Lowlying	156	157
Plateau	110	120
Hilly	92	93

Gangapur.

Owing to its peculiar position the density rises to 353 per square mile in the isolated tract of Gangapur which lies in Rajputana far away from the parent State, but the area of such a tract is too small to be used for purposes of comparison.

Bhind V Jalaun, Tonwarghar V Etawah and Agra.

As regards density Bhind with 233 to the square mile compares fairly well with the contiguous British District of Jalaun with 261 but Tonwarghar (183) does not show up so well against Etawah (449) or

Agra (485). On the other hand, the density of Tonwarghar, in spite of the famine of 1905, has risen by a fraction, while the density of Bhind has sunk by nearly $4\frac{1}{2}$ per cent.

The density of population in the Lowlying *Zilas* is higher than that in any of the Plateau *Zilas* or in Amjhera. This is due probably to the fact that the people avail themselves more of the existing means of irrigation. In Malwa the peasant does not, as a rule, irrigate any crops other than poppy. The soils of the Lowlying *Zilas* are not as a whole so fertile as those of the *Zilas* on the Plateau but they can be worked with a lighter and cheaper breed of oxen than that required for the famous *Mar* or black cotton soil.

It is true that Sheopur, a *Zila* which has been included in the Lowlying section of the State, has the lowest density of any of the eleven *Zilas* but the case of Sheopur is exceptional. A large part of this *Zila* consists of ravines through which the water runs off into the Chambal and other big tracts are covered with reserved forests where cultivation is wisely discouraged and lastly in the whole of Sheopur means for conserving the rain and irrigation projects in general are not as yet far advanced. The irrigation department is doing as much for this *Zila* as for other parts of the State, and the density per square mile in Sheopur ought to show a striking increase in the next fifty years since much of the soil is most fertile. While there are some very ambitious irrigation works in course of construction in Gwalior yet at present facilities for irrigation are not sufficiently advanced for any very certain and valuable conclusions to be drawn between the density of the population in irrigated and unirrigated areas. The *Mar* soil of the Plateau when quite unirrigated and the *Padua* soil of the Lowlying tract when well irrigated grow the same *Rabi* crops about equally well. So no comparison as regards irrigation and density of population is possible between these two natural divisions.

Rainfall. Again meteorological statistics have not been kept long enough in the various *Parganas* to enable a person to say accurately what the normal rainfall in any one *Zila* really is. In ten years time more reliable data than the present figures should be available and possible some connection between variations in density and in rainfall may be traced for the natural divisions or *Zilas* of the State. The only certain fact about the rainfall in the State at present is its extreme variability from year to year. Subsidiary Table No. II, Distribution of the population classified according to density, calls for no comment.

Cities. There are no cities in the Gwalior State technically speaking but Lashkar has been treated as a city for the purposes of the report as will be seen from Subsidiary Table IV. Any figure as to the density of population of this place would, however, be utterly misleading as at the time of the taking of the census Lashkar was half deserted owing to a severe outbreak of plague. More will be said on this subject when dealing with Table IV.

Towns and villags.

Under the term "town" was included for Census purposes all municipalities and Cantonments, every place with a population of 5,000 and over and such other places of less than 5,000 inhabitants which might be considered to have distinct urban characteristics.

If Lashkar be included there are in the State proper twenty-five towns with a total population of 256,885 persons to which may be added three British Cantonments with a total population of 20,904.

The distribution of the population between towns and villages is shown by natural divisions and by *Zilas* in Table III and Subsidiary Table III. Just over 8 per cent. of the total population are dwellers in towns but many of these towns lack real urban characteristics since their inhabitants support themselves by agriculture rather than by trade or commerce. Lashkar and Ujjain are very much larger than the rest of the towns and their joint population forms a large fraction of the whole urban population but as the figures for these two towns are utterly vitiated by plague the actual figures given in the Tables mentioned above are probably misleading. One fact is, however, clear from a comparison of the figures for the urban population of 1901 with those of the present Census. The rush to the towns has not yet begun in Gwalior for Commerce and Industry conducted on modern lines are plants of very recent growth. It is a vexed question whether until the State is more extensively cultivated a large increase in the urban population would be a good sign or not. As regards the number per mile of total population and of each main religion who live in towns a reference to Subsidiary Table IV shows that the Christian, the Musalman, the Jain and "Others" are predominantly dwellers in towns, the Hindu stays in his village and except in time of famine, profits by living the simple life.

The *Mauza*, *i. e.*, revenue area, is the village taken for Census purposes in this State. The list of villages given in the Census report does not agree with that obtained from the local officers but to obviate this difficulty in future years the list has been checked and a Supplementary Table is being published.

The villages are grouped in 4 classes, *viz*, under 500, 500-1,000, 1,000-2,000, and 2,000-5,000. Of which the number 9,056 in the "under 500" class predominates.

Most of the villages consist of compact blocks of houses with the village land around them on all sides. Sometimes there are one or more *puras*, *i. e.*, hamlets, which for Revenue and Census purposes are included under the village proper. The most common exceptions to this type of village are the straggling lines or clusters of leaf huts erected by the Bhils and Saharias respectively which sometimes have a separate name and are not included in the boundaries of some regular village.

The total number of villages in 1901 was given as 9,538, while the number (unchecked as yet) for 1911 is 10,378. Probably the number for 1911 is substantially correct, while the number for 1901 was understated.

At the same time there is no doubt that many new villages have been settled and no account is taken in the 1901 figures of the estates of Maksudangarh, etc., which lapsed to the State during the intercensal period. Throughout the whole State there are over 41 villages to every 100 square miles compared with 38 in 1901. The figures for natural divisions compare as follows :—

Natural Division.	Number of villages per 100 square miles.	
	1911	1901
Lowlying	40	40
Plateau	41	37
Hilly	41	36

The average population per village amounts to 274. On the Plateau 244, while in the Lowlying and Hilly Tracts it is 348 and 244 respectively.

House-room.

Very little need be said on this subject. The average number of persons per house remained the same, *viz.*, 5 for the whole State, while the average number of houses per square mile rose from 22 in 1901 to 26 in 1911. A consideration of these figures or of similar figures for the various natural divisions of the State cannot be of much value as there are no similar figures available for decades before 1901. The increase in the number of houses to the square mile is due in the main, it is probable, more to the increased strictness in the definition of a house than to a real increase in the number of actual structures.

The definition given in 1901 was not found sufficiently precise and on this occasion the following definition was, therefore, given and illustrated by diagrams.

A house for Census purposes is defined as follows :—

(*i*) Any structure other than a dwelling, such as tent, pavilion, temple, *sarai*, etc , or a site, camping ground, ghat, etc , to which a separate number has been affixed.

(*ii*) The dwelling place of one or more families with their dependents and resident servants having an independent entrance, whether that entrance be from a road, gallery corridor, courtyard, or otherwise.

Houses vary in their appearance with the materials with which they are constructed and these again vary with the locality. In places where lime stone and sand stone abound, the houses are constructed and roofed with stone. In Gwalior and some other places better class of houses are decorated with ornamental work carved on stone. Where stone is rare brick is used with wooden ornamental work.

In the Malwa Prant, generally, houses are built of bricks and wood, roofed with country tiles, and founded on black hard stone, with the exception of the Neemuch and Singoli (Jawad) ***Parganas*** where stone

slabs abound, and are used in constructing and roofing the houses. As a rule, houses of more than one storey are found in towns, in villages there are some exceptions to the rule, all being single storeyed. Khajur trunks are made use of in constructing the houses in villages. Such houses as are roofed with mud and Khajur leaves, etc., are called *Oras* In Amjhera, where the Bhils, etc., predominate, the huts are generally built of bamboo and other jungle trees and thatched with grass and leaves.

Subsidiary Table I.—Density, Water-supply and Crops.

District and Natural Division.	Mean density per square mile in 1911. CHAPTER II.

MOVEMENT OF THE POPULATION.

Introductory.

THE statistics of the population as it stood on March 10, 1911, have been considered in the previous Chapter. The present Chapter deals with the variation that have taken place since 1901 with occasional references to the Censuses of 1881 and 1891. The phrase "movement of the population" is sanctioned by statistical usage to denote the net result of the two factors which determine the strength of the population at any given time, *viz.*, the proportion of births to deaths and the proportion of emigration to immigration. It is the effect of these factors and the state of affairs which result from these opposing forces that should be considered in this Chapter.

Unfortunately, however, vital statistics for the past decade are not complete. Further they are not reliable in the Gwalior State any more than they are in other parts of Central India. The death statistics are probably more accurate than the statistics for births, but still by themselves are of little use. The unreliability of these vital statistics curtails discussion and forces the writer to be wary in making assertions about the growth of the population beyond the fact that the population has grown.

Any estimates of the population of Gwalior prior to 1881 are mere guess work. The general belief held by the people of each *Zila*, is that the tract in which they live once supported a far larger population than it does to-day.

To consider the Censuses of 1881 and 1891 as reliable would be a mistake. The enumerators suffered from a lack of experience and a lack of system. Further there are no figures for *Zilas* ascertainable. The Censuses of 1901 and 1911, however, followed the censuses of British India in all details. I propose, therefore, to deal only with the figures for 1901 and 1911 as being comparable. Some slight variation of area occurred but the figures have been adjusted in Table II. It is probable that the enumerations of 1901 and 1911 both attained an equal degree of comparative accuracy and no variation need be assigned to this cause in the discussion.

There now remains to be considered the actual increase.

Variation since 1901.

Subsidiary Table I gives the percentage of variation for the whole State between 1901 and 1911 as + 5·1, between 1891 and 1901 as − 13·1 and between 1881 and 1891 as + 12·8. It is such a figure as this last that suggests the inaccuracy of the earliest enumeration. It is hardly likely that the population increased by 12·8 per cent. during the decade in question. The decrease of 13 1 between 1891 and 1901 is probably more or less accurate as there were two famines in that decade, but it would be far easier to pronounce on the accuracy of these figures if the percentages of increase or decrease by natural divisions or by *Zilas* were available for 1891, which they are not.

The figures for natural divisions for the decade 1901-1911 show that the Lowlying tract having been attacked subsequently by famine lost 7·3 per cent.

of its population, while the Plateau and the Hilly tract gained 14·6 and 24·2, respectively, an increase mostly due to the rebound after the famine of 1900.

Of the four *Zilas* of the Lowlying tract, namely, Gird, Bhind, Sheopur, and Tonwarghar, all except the last named, lost in population, while the increase shown by Tonwarghar is but 0·6, that is, an increase that is negligible.

Every other *Zila* in the State shows a big increase, Bhilsa (Plateau), heading the list with + 38·3 per cent. and Amjhera (Hilly) coming next with + 24·2 per cent. No *Zila* in the Plateau or Hilly tract shows an increase of less than 10·8 per cent. The figures are just what was to be expected. In 1901 Bhilsa, owing to a succession of bad seasons and a severe famine, showed a decrease of nearly 22 per cent. This *Zila* has for the past ten years enjoyed a succession of fair or good seasons. The whole of Malwa and Amjhera have not suffered from famine conditions.

On the other hand, the Lowlying tract had, owing to the failure of the monsoon rains, to face a famine in the year 1905-06. This famine was made more serious by the great damage already done by severe frost to the *Rabi* crop of 1904-05. The rains after starting well enough totally failed in the beginning of August and the *ryot* lost his seed as well as failing to reap a crop. The *Juari* did not grow to any height and as there was not much grass there ensued a fodder famine in which the mortality among the cattle was very high. Famine works and relief camps were promptly and efficiently organized and deaths from famine must have been very rare. From the Bhind and Sheopur districts a large number of people migrated to the Plateau and many never returned but settled down in fertile spots in the southern parts of Isagarh and in Bhilsa. While on tour in these last named *Zilas* one is often asked if one has seen the Bhind or Sheopur village from which some settler in the Plateau originally came. The very high rate of increase in the Bhilsa *Zila* is due partly to such immigration.

Again, in the Lowlying tract the years 1907, 1908 and 1909 were very lean years, so that the recovery from the famine of 1904-05 has been rather slow.

Subsidiary Table II gives the variation in natural population. From the point of view of administration it is not satisfactory to see that in 1911 emigrants outnumbered immigrants by a still larger figure than was the case in 1901. There has been no particular incentive to immigration during the last decade beyond the eternal one of a fertile soil. The big irrigation projects now in course of construction in the State have not yet begun to influence the flow or the growth of the population. Industry and Trade are still in their infancy in the State and must depend for their success on the general level of prosperity attained by the agricultural classes.

For the moment there are in no *Zila* of the State conditions which approach overcrowding. Rather there is land and room for a far bigger population. The figure of density per square mile for the State is at present 123. While making all allowances for unculturable tracts or forest reserves the figure might easily be 250 to the square mile even though the peasant continued his present system of agriculture and did not adopt the intensive farming that is to introduce the millennium in India.

Whether the figure per square mile rises rapidly or not depends in the main on the not too frequent recurrence of famines, on the liberal provision made to fight famine when it does arise and on an equitable land settlement which enables the peasant to buy strong bullocks for his plough. All else is of little or no importance to the agriculturist in his village. Such is his view in the matter. As regards administration all the peasant asks for is to be left alone. A bad administration or no administration if it leaves him to his own devices is more acceptable than a far better administration if it be too inquisitorial. When famine appears the State must come to the peasant's aid and help in no niggardly manner. The most hopeless state of things is when the peasant is an over-administered man but yet not sure that he will be tended and cared for during times of famine. The last decade has seen a very great increase in the efficiency of the administration of the State, and such efficiency is certain to continue to grow. Again the peasant is not unduly interfered with. These are the facts that make the State look forward with sanguine hopes to a large increase of population at the next Census in 1921.

N.B.—Actual population shewn in Table XI of the last Census Report for 1901 is 2,929,621 while the adjusted population for Table II of 1911 is 2,949,073, which exceeds by 19,452. It being very difficult, rather impossible, to get the actual proportions of immigrants, and emigrants for the population exceeded, the number of persons in columns 7, 8 and 9 is shewn the same as given in the last report. As for column 6 the adjusted population for each *Zila* and natural division is shewn. The difference 19,452 is due to the following reasons —

3,380 Exclusion of Railway population from all the Tables VI onward for 1901.
14,873 Inclusion of the population of two Estates—Maksudangarh 14,284 and Kamalpur 589—now lapsed.
1,199 Inclusion of the population of Residency villages reverted to Darbar.

19,452

CHAPTER III.

BIRTHPLACE.

Statistics of Birthplace.

IN Table XI will be found the statistics of birthplace of the population enumerated in Gwalior, while in the Subsidiary Tables at the end of this Chapter there is a comparison of the number of outside-born people enumerated in Gwalior with the number of Gwalior-born people enumerated elsewhere.

The tables as a whole show that the people of Gwalior are inclined to stay at home. In Northern Gwalior as many as 89 per cent. of the people were born in that part of the State while in Malwa where the *Zilas* are not defined by well marked boundaries and the territories of various States are much intermingled the percentage of home-born persons drops to 77.

The number of Gwalior-born persons enumerated outside the State so far as can be gathered from the Statements furnished by the Provincial Superintendent was 412,462 as compared with 351,066 in 1901.

Immigrants into Gwalior.

Of the so called 261,123 immigrants 145,018 are from other States of Central India and the majority of these have merely stepped over the boundary line between portions of contiguous States. From British Territory 115,549 persons are found to have come while the Portuguese settlement of Goa gives the State 5 immigrants.

The Rajputana States give Gwalior 58,211 persons as compared with 82,781 in 1901. This would seem to indicate the return to Rajputana of many of the wanderers whom famine had driven into Gwalior before the taking of the census of 1901. The United Provinces give Gwalior 40,456 persons, a number less by nearly 33,000 than that recorded in 1901. Indore and Bhopal give Gwalior 38,338 and 21,408 persons, respectively. No other figures deserve special mention.

So far as can be judged there is no one caste or section of the community that is immigrating into Gwalior in considerable numbers either from British India or the Native States.

Emigrants from Gwalior.

In the matter of emigration the census figures for the State tell an unflattering tale. The number of emigrants from the State to British India was 165,846 as compared with 128,142 in 1901. Rajputana takes away 66,716 persons as compared with 35,523 in 1901, the States of Central India 246,133 as compared with 222,924 in 1901. Indore alone has received 76,085 emigrants from Gwalior and various unspecified States in Central India 67,676.

Types of Migration.

Of the five types of migration enumerated by the Census Commissioner for India, namely, Casual, Temporary, Periodic, Semi-permanent and Permanent, the first named type is by far the commonest. It consists mainly of minor movements between adjacent villages and tracts and is due largely to

the custom of taking a bride from a different village to that of which the bridegroom is an inhabitant. Temporary and periodic migration is not very common since pilgrimages and fairs do not as a rule cause any great flux of the population in this State. Semi-permanent migration is possibly on the increase since certainly each year more active and intelligent men leave the Bhind and Tonwarghar *Zilas* to earn their living in British India. Practically all the 2,948 emigrants from Gwalior to Bengal are of this type so far as can be ascertained.

Permanent migration which is caused by overcrowding or attraction to other districts is in Gwalior only the result of the latter cause. Bad administration or what is worse over-administration frightens cultivators away as much as a stiff settlement does. Similarly a good administration and an easy settlement attracts them.

Loss or gain by migration.

As already pointed out the total number of immigrants into Gwalior of one type or another was 261,123 and that of emigrants 412,462. The net result of migration was thus a loss of 151,339 to the State. In 1901 the loss was 55,882 persons. Even taking into consideration the fact that there have been certain lean years and indeed a local and localised famine in four *Zilas* in the year 1905-1906 still the result is from the point of view of one keenly interested in the welfare and progress of Gwalior the most disappointing feature revealed by an examination of the census figures of 1911. British India has taken from Gwalior over half a lakh more than it has given, while the other States of Central India have taken over one lakh more persons than they have given to the population of Gwalior.

CHAPTER IV.

RELIGION.

Introductory.

TABLES VI, XVII and XVIII with the Subsidiary Tables at the end of the Text form the data for this Chapter. The inquiry into sects in 1901 provided a record of names but with little satisfaction and so was not repeated in the Census of 1911. This Chapter will confine itself to a discussion of the statistics to be found in the several Tables mentioned above.

Distribution and variation since 1901.

The general distribution by religions in the last two enumerations is shown in the inset. These figures show that the Hindus have increased by 13·6 per cent. An examination of the figures by districts shows that the increase is 50·7 per cent. in the Hilly region, 22 per cent. in the Plateau and only 1·8 in the Lowlying tract. Against the increase of the Hindus must be set the decrease of 73·2 per cent. in the number of Animists in the State. Animists are now returning themselves as Hindus. All the Bharuds and the majority of the Kirars, Minas and Saharias have returned themselves as Hindus though the Gonds as a rule prefer to be classed as Animists or rather when asked if they are Hindus deny the fact. Of the total number of Bhils, *viz.*, 53,299 as many as 10,478 have actually returned themselves as Hindus. The Musalman and Jain figures show falls of 3·5 per cent. and 28·9 per cent. respectively. The fall in the number of Musalmans is not easy to explain from any available data.

Religion.	Number in 1911	Number in 1901
TOTAL	**3,101,874**	**2,949,073**
Hindus	2,836,866	2,495,326
Musalmans	165,894	172,528
Jains	38,372	54,024
Animists	59,899	226,281
Christians	610	866
Others	233	48

NOTE:—The figures of 1901 include 16,072 the figures for Maksudangarh, Kamalpur aud Residency villages reverted to Darbar.

The fall in the number of Jains is traceable in part to the evacuation of the towns at the time of Census owing to plague but is on the whole inexplicable unless the explanation be accepted that some Jains have been returned as Hindus.

Christians show a drop of nearly 30 per cent. but when the total numbers involved are so small as in this case such a variation in the figures does not need comment.

The remaining forms of religious belief dealt with under the heading "others" are undeserving of mention. The total number of persons involved is 233 only.

Hindus.

Gwalior is a Hindu State. Out of 3,101,874 inhabitants 2,836,866 or over 90 per cent. of the total population are Hindus. The percentage for the Central India Agency is also nearly 90 per cent. As regards Gwalior, roughly speaking, in the Lowlying tract 11 out of every 12 persons are Hindus in the Plateau 16 out of 17 and in the Hilly district 8 out of 20.

What constitutes a Hindu is a difficult question to answer but the tests proposed by the Census Commissioner for India to differentiate Hindus and Non-Hindus were held to be of no avail in solving the question in Gwalior. These tests were as follows :—

(i) Do members of the caste or tribe worship the great Hindu deities ?

(ii) Are they allowed to enter Hindu temples or make offerings at the shrine ?

(iii) Will good Brahmans act as their priests ?

(iv) Will degraded Brahmans do so ? In that case are they recognised as Brahmans by persons outside the caste or are they Brahmans only in name ?

(v) Will clean castes take water from them ?

(vi) Do they cause pollution (*a*) by touch (*b*) by proximity.

Pollution by proximity is absolutely unknown in the State.

Animists.

Under this heading are included all persons who when asked to state their religion replied that they were not Hindus, Musalmans, etc., and belonged in fact to none of the recognised forms of faith. Practically all the Animists in Gwalior are members of the jungle tribes, but their numbers are falling fast as the numbers of the various jungle tribes begin to enroll themselves as Hindus. It is an interesting question whether the adoption of Hindu civilisation with the Hindu faith will in time cause the numbers of the Animists to disappear.

Musalmans.

In point of numbers at this Census Musalmans rank as second but far behind Hindus. In 1901 their numbers were 172,528 as compared with 226,281 Animists, but owing to the large number of Animists who have returned themselves as Hindus the Musalmans stand second though the number of Musalmans (165,894) has fallen slightly in the decade under review.

Jains.

The large drop in the number of Jains recorded, *viz.*, about 29 per cent. is also largely due to the exodus of the Jains from the towns owing to plague. Again the number of Jains in 1901 is supposed to have been set too high by a mistake in compilation which returned as Jains certain persons who asserted that they were Hindus. The Jains are essentially town dwellers but occasionally settle in any village which shows a tendency to develop into a small town. As the Jain population is under one and a quarter per cent. of the total population of the State a big rise or fall in the percentage of Jains is not a matter requiring much comment. There is no doubt that many Jains did, in the recent Census, return themselves as Hindus.

Christians.

Subsidiary Table III gives the numbers of and variations in the Christian population of the State. The total number of Christians in 1901 was 866 while in 1911 it had fallen to 610.

The hilly tract returns 9 Christians on this occasion while from the same tract none were recorded in 1901. Subsidiary Table IV shows the races and sects of Christians but as the Anglo-Indian (Eurasian) is prone to return himself as a European and the Indian-Christian as an Anglo-Indian the figures for race are apt to be misleading. Again a very large number proportionately of Christians have not returned their sect. Presbyterians and Roman Catholics show a rise in figures.

Others.

The total number of persons grouped for Census purposes under this head is only 233. This head includes Aryas, Brahmo-Samajists, Sikhs, Parsis and Jews. The figures call for no comment.

CHAPTER V.

AGE.

THE tables to be discussed in this Chapter are Table VII recording the distribution of the whole population by age, sex, and religion and Table XIV giving similar statistics for selected castes. At the end of this Chapter come the requisite Subsidiary Tables. Of these No. 1 which is the same as that employed in the Central India Agency Report gives the exact ages of 100,000 Hindus of each sex while the other Subsidiary Tables give the main facts in proportional forms.

The figures are unreliable. Many people do not know their ages at all and still more do not know them accurately. The Age Table should show the highest number of children under the age of one year and a steady decrease from that age onwards. The figures for females are, if anything less reliable than those for males and unmarried girls who have reached puberty, apt to have had their ages understated. While, however, the figures are unreliable, the sources of errors are the same as in 1901. The Census of 1901 was taken just after the great famine of 1899-1900.

An examination of Subsidiary Table II shows the heavy death roll in 1901 among children of the age of five and under throughout the State and specially in the Plateau and Hilly tracts where famine was far more severe than in the Lowlying portion of the State.

Mean Age.

The column entitled "mean age" shows the mean age of those living at the time of the Census, and does not deal with the duration or expectation of life. So far as Gwalior is concerned the figures for the whole State show that the mean age of males in 1911 to be 29·6 as compared with 29·3 in 1901 while the mean age for females is 30 in 1911 as compared with 32 in 1901.

It is questionable if these figures and variations deserve consideration. The figures for mean age taken by natural divisions show practically no change for males or females in the Lowlying tract, a comparatively small change in the case of males in the Hilly region but an extraordinary difference in the case of females in the Plateau. In 1901 the mean age for females was 33·1, in 1911 it is 30·66.

Religion and Age.

The figures for the different religions show that for the ages 0-5; the Animists easily stand first whether male or female figures are taken. As regards long life, on the other hand, the Animists come last. From 40 onwards the Jains as a whole are ahead of the Hindus, Animists or Musalmans. The figures for Christians and "others" may be neglected since the number of persons affected is not sufficiently large to make statistics reliable. Locality may or may not affect the figures in the case of the religion and age.

Caste and Age.

Subsidiary Table IV gives the figures for age distribution of 1,000 of each sex in certain castes. It would be unsafe to draw any conclusions except that as a whole the Brahman is longer lived than the Rajput, a conclusion that is in accordance with local belief.

Fecundity.

Subsidiary Table V gives the proportion of children under 10 and of persons over 50 to those aged 15-40 and also of married females aged 15-40 per 100 females. Table VI gives the variation since 1901. The number of children at 0-10 has risen by 31 per cent. as a result of the increased fecundity which followed on the famine of 1900. The Plateau showing a use of 64·3 per cent. and the Hilly tract of 50 per cent. As regards the number of children the Hilly tract stands first though closely followed by the Plateau while the Lowlying region is considerably behind. The so-called lower castes would seem to be more prolific than the higher castes.

Subsidiary Table VI.—Variation in Population of Certain Age Periods.

Natural Division.	Period.	Variation per cent. in Population (Increase +: Decrease —).					
		All Ages.	0-10	10-15	15-40	40-60	60 and over.
1	2	3	4	5	6	7	8
STATE	**1901-1911.**	**+ 5·87**	**+ 30·80**	**— 12·89**	**— 1·30**	**+ 5·02**	**+ 14·19**
Lowlying	,, ...	— 5·09	— 4·12	— 8·07	— 5·10	— 6·12	+ 2·29
Plateau	,, ...	+ 13·76	+ 64·29	— 17·20	+ 0 35	+ 14·19	+ 23·67
Hilly	,, ...	+ 24·21	+ 49·74	— 6·24	+ 18·46	+ 18·15	+ 53·99

The population for 1901 compared in this Table is exclusive of the following figures:—

Railways	...	...	3,380
Maksudangarh	...	...	14,284
Kamalpur	...	...	589
Residency villages		...	1,199
			19,452

This exclusion mostly affects the population of the Lowlying tract; as for Plateau very small population of Kamalpur and the Railway as well affects to some extent, while there is no change whatever in the Hilly tract.

CHAPTER VI.

Sex.

Preponderance of Females over Males.

THE recent Census figures show that for the whole State there were 903 females to every 1,000 males as against 906 in 1901, 872 in 1891 and 849 in 1881. If we accept the figures for 1901 and 1911 as fairly accurate, we can only attribute the figures of 1891 and 1880 to the concealment of a large number of females at the time of those censuses or to a disposition on the part of enumerators to consider the inclusion or exclusion of females as a matter of little account.

A preponderance of *females* over males is the usual feature throughout India if we exempt the Madras Presidency and certain of the States of Southern India.

Sex and Natural Divisions.

Subsidiary Table I at the end of this Chapter shows the general proportions of the sexes by Natural Divisions and Districts. The figures are for actual population only and are not available for any census prior to 1901. The figures show that in the Lowlying tract and Plateau the proportion of females to males is decreasing as can be seen from the inset.

Natural Division.	Number of Females to 1,000 Males.	
	1911	1901
Lowlying	853	861
Plateau	932	940

In the Hilly region, on the other hand, the number of females has risen and exceeds the number of males. In 1901 the proportion was 983 females to 1,000 males, but in 1911 it was 1,002 females to 1,000 males. As has been stated before in this report the Hilly region consists of one *Zila* Amjhera. In every one of the other districts of the State the number of females is less than the number of males and in one district Tonwarghar sinks to 830 females to 1,000 males.

Sex and Religion.

Subsidiary Table II gives the number of females per 1,000 males at different age periods by religions at each of the last two censuses. The figures are not reliable and it would be unsafe to draw any conclusions from the data before us. The only statement that can be made is that taking the figures for all religions or those for Hindus or Musalmans at the age of 60 or over females preponderate over males. Even here the figures are unusual if we compare those for 1911 with the similar figures for 1901.

Sex and Caste.

The figures of Subsidiary Table IV which gives the number of females per 1,000 males for certain selected castes also need to be taken with caution. The Chauhan Rajputs show 1,657 females to 1,000 males and at the marriageable age-periods 12–15 or 15–20 they show 2,077 and 1,885 females respectively to every 1,000 males. The Kachhawaha Rajputs, on the other hand, show 2,996 females for the age-period 5–12 and drop to 402 for age-period 12–15, rising again to 1,181 for the period 15–20. Such figures as those given above are clearly untrustworthy. If we accept the Sondhias, a caste which, for all ages, shows 2,911 females to 1,000 males and at the period 12–15, 5,067 females to 1,000 males—another incredible set of figures due to inaccurate

enumeration—the Bania group of castes shows the largest proportion of emales to males, *viz.*, 1,302 to 1,000 for all ages. The Animistic Bhil shows a figure of 1,042 females to 1,000 males.

Sex and Age.

The absence of vital statistics makes it impossible to deal thoroughly with the question as to whether male births exceed female births in Gwalior as would seem to be the case in other parts of India where vital statistics are available. It would seem safe, however, to make this assumption. As to the question at what age do the number of females begin to exceed the number of males of the same age, the figures of Subsidiary Tables II and III are hardly reliable enough to form an opinion. There are certainly more women than men of the age of 60 and over, but it is a question if in spite of the contradiction of the figures there are not more females than men of the age of 50-60 or even of the age of 40-50.

NOTE.—The castes which contribute 5 per mille to the total population of the State, are only taken for this Table, from Table XIV.

CHAPTER VII.

CIVIL CONDITION.

Introductory.

IN Table VII will be found the statistics of civil condition by religion, age and sex, in other words, the number of males and females among the followers of various faiths who are married, unmarried, or widowed in certain age-periods. In Table XIV will be found similar statistics for certain selected castes with slightly different age periods from those given in Table VII. The Subsidiary Tables at the end of this Chapter put the same statistics into proportional and condensed forms. It is probable that these statistics are fairly reliable though as was pointed out by the writer of the last Census Report for Gwalior the enumerators may have sometimes been in doubt as to whether the relations of certain persons living together did or did not constitute a marriage.

Early Marriage.

Over 90 per cent. of the population of Gwalior are Hindus and early marriage is prevalent and would seem to be increasing. If we take the age-periods 0-5 and 5-10 for all religions as given in Subsidiary Table I we see that in 1911, 29 males out of every 1,000 as compared with 11 males in 1901 are married for the age-period 0-5 and that out of 1,000 males of the age-period 5-10 in 1911, 65 as compared with 60 in 1901 are married. As regards girls only 23 out of 1,000 are married in the age-period 0-5 as compared with 31 in 1901, but when we come to the age-period 5-10 we find 132 girls in 1911 compared with 116 girls in 1901. The figures for child widows would seem to be less than those for the previous census. The Musalman population appear to be adopting the habit from the Hindus. If we count the figures for the first two age-periods together we find 69 Musalman boys and 159 Musalman girls under the age of 10 married in 1911 as compared with 31 boys and 139 girls in the same civil condition in 1901.

Religion and Civil Condition.

If we take the heading "All religions" the figures are found to be practically the same as those for Hindus as was the case in 1901. This is not unexpected as over 90 per cent. of the population of the State are Hindus. As regards Hindu females the figures for married and unmarried both show an increase as compared with similar figures for 1901. The figure for widows shows a large decline. These figures are given in the inset.

HINDU FEMALES—ALL AGES—PER 1,000.

Year.	Unmarried.	Married.	Widowed.
1911	299	508	193
1901	290	490	220

In the matter of widowhood Hindu women follow the Jains who show 243 widows in every 1,000 in 1911 compared with a similar figure of 264 in 1901. The number of Musalman widows has also declined from 200 per 1,000 in 1901 to 176 in 1911. Amongst Animists the number of widows shows an extraordinary drop from 203 in 1901 to 121 in 1911. The figures for Christians and others are not worthy of comment.

In the case of males the Jains show the greatest number of widowers, *viz.*, 109 per 1,000. They are followed by Hindu males with 71 per 1,000. The figure for Animists, *viz.*, 32 per 1,000, is very low.

Natural Division and Civil Condition.

There is nothing very remarkable in the figures for civil condition by natural divisions which are to be found in Subsidiary Table II. As regards unmarried persons whether male or female at all ages the Hilly tract comes first, then follows the Plateau, the Lowlying tract bringing up the rear.

As regards widows and widowers the Lowlying region comes first, the Plateau follows and the Hilly tract comes last. In the case of the marriage of males the highest figure is that for the Lowlying region, the Plateau gives the next highest figure and the Hilly region comes last, but when the figures for women are taken the Plateau is first with the figure 509 compared with 504 for the Lowlying and 484 for the Hilly region.

There does not seem to be any feature in the figures for civil condition by religion and locality that warrants a discussion either in the case of males or females at any of the age-periods.

Polygamy and Polyandry.

Polyandry is unknown in the State but Polygamy is common among Hindus and Musalmans of position and wealth. So far as can be judged from the figures polygamy is commonest among the Animists. It is also commoner among the Hindus of the Hilly region and the Plateau than it is among the Hindus living in the Lowlying region. Christians, in the Hilly region, show an equal number of wives and husbands.

CHAPTER VIII.

EDUCATION.

Introductory.

IN Table VIII will be found statistics of Education by age and religion while in Table IX will be found statistics of Education by selected castes and races. In the Subsidiary Tables at the end of this Chapter the more important facts to be gathered from these figures are shown in proportional form. No test as regards literacy was recorded before the Census of 1901. As, however, the definition of a "literate" person in 1911 was laid down as a one who could both write a letter and read the answer to it, quite a large number of persons who were counted as literates in 1901 must have been deprived of that distinction on this occasion.

It is probable that the returns are fairly accurate though there is evidently a mistake in Subsidiary Table VI—Education by caste to-which attention will be drawn later.

General Literacy

The figures for the State give us 28·3 per thousand literate in all religions for both sexes, of all ages, and show that 51·6 per thousand males and 2·5 per thousand females were able to satisfy the test of literacy. Of literate males just over 7 per cent. are above 20 years of age, while just under 6 per cent. and 5 per cent. are literate in the age-periods 15–20 and 10–15, respectively. Under 10 there are 6 males per thousand literate. Of females aged 20 and over only 3 per mille are literate, while in the age-periods 0–10, 10–15 and 15–20 the figures are ·8, 3·5, and 4, respectively.

English.

At the recent census no return of language was made but Hindi, Urdu and Marathi remain the chief written languages and their importance in every-day life is indicated by the order in which they are placed. There is a great and growing demand for Education in English but at present only 2·7 males per mille are literate in this language. Only one woman in ten thousand is literate in English.

Religion and Education.

As regards literacy by religions the Christians and others, *i. e.*, Parsis, Sikhs and Arya Samajis, are easily first. Christians show 742 males and 595 females literate per 1,000, while others show 638 males and 378 females literate per 1,000. As, however, the figures for Christians and others whose educational standard moreover is high, deal with very small numbers of persons the figures may well be neglected. The Jains now come out easily first with 391 males and 18 females literate per thousand, the Musalmans follow with 103 males and 13 females literate per thousand then come the Hindus with 45 males and 2 females literate per 1,000. The Animist figures show 1 male but no females literate per thousand. As regards a knowledge of English the Christians are again first followed by the Parsis. This was only to be expected but the Musalman now takes the place of honour with 3 3 per mille literate as compared with 2 2 Jains and 1·2 Hindus. There are no Animists literate in English.

Locality and Education.

The figures for literacy for all ages by Natural Division show a curious sameness. They are as follows:—

Natural Division.	Number per mille literate.
Lowlying ...	28·1
Plateau ...	28·5
Hilly ...	2·78

As regards *Zilas*, Gird leads with 59·1, Mandasor comes next with 50·4 and Ujjain third with 50·4 literates per mille for all ages. Tonwarghar, Narwar and Bhind are the most backward *Zilas* from the point of view of literacy.

The figures for the school-going ages of 10-15 and 15-20 would seem to be fairly high in each of the three Natural Divisions if one may judge from the number returned as literates under those age-periods in Subsidiary Table II. The figure, however, for literate females (10-15) in the Hilly region, *viz.*, 9 8 per mille, looks suspiciously high.

Caste and Education.

Subsidiary Table VI gives Education by selected castes but it contains some figures that are impossible and particularly those figures as regards the number per 10,000 of males in the Maratha and Dikhit castes who are literate in English. These figures must be the result of some mistake in the record. As regards general literacy to the figures for Dikhit and Maratha males should be looked on with suspicion, being 500 and 417·7 per mille, respectively. No special figures are given for Deccani Brahmans and these have perhaps been returned under Marathas, but I imagine this caste as a whole possesses the greatest number of literates.

The Jains are prominent with 442·3 Oswals and 308·6 Porwals per thousand males literate. Among the Bania castes the figure for Mahesris, *viz.*, 375·8 males per mille, is high. Of the Musalmans, the best figure is that of the Saiyads with 172 8 literate males per mille. The figure for Saiyad females 20 per mille is also high and is only inferior to the figure for Jain Porwal females, which stands at 24 per mille.

Progress of Education.

Subsidiary Table V should give the progress of Education since 1881, but no figures are available for the first two censuses. Any discussion of figures therefore resolves itself into a comparison of the figures for 1911 with those for 1901. If it be considered that the standard of literacy in 1911 was so defined as to make it higher than the standard in 1901, the figures are most satisfactory. The number of literate males at all ages for the State has risen in the past decade from 45 to 51 per mille and the number of literate females has doubled in the same period though the present figure 2 per mille is still very low.

If the school-going ages 10-15 and 15-20 are taken, the figures show a decline in nearly every case but this does not mean that fewer boys and girls are going to school for Subsidiary Table VII shows that the reverse is the case. Owing to the facilities now offered in State institutions many boys and girls who once would have been taught to read and write at home are now attending schools where they get a more thorough drill in the use of the weapons of education. In the coming decade it is hoped that something will be done in State schools to impart that culture which inclines persons to make use of these weapons in after-life. The recent introduction of compulsory education for Maratha boys ought to show marked effects by 1921.

Local Publications.

Subsidiary Tables IX and X which deal with local publications need no comment in this report.

CHAPTER IX.

LANGUAGE.

Introductory.

IN Table X will be found statistics of the Languages and Dialects of Gwalior. The languages are grouped under the following four main heads :—

1. Indian languages proper to the State.
2. Indian languages not proper to the State.
3. Asiatic languages other than Indian.
4. European languages.

Subsidiary Table I is in two parts. The first part shows the distribution of the total population by languages according to the Census. The second part shows the distribution of the total population by languages according to the linguistic survey.

In Subsidiary Table II the main facts about the languages of each district are given in proportional and condensed forms.

Subsidiary Table III compares the caste and language tables.

Dialects.

A discussion of the various dialects comprised under the different language heads is unnecessary but it may be said that Gondi as spoken in the Bhilsa *Zila* though classified as a Dravidian language is really but a corrupt dialect with a vocabulary based largely on the Malwi vernacular and so is by no means a pure non-aryan dialect. Malwi, a dialect spoken throughout the whole of the Malwa Prant except in Amjhera, is the most popular vernacular. $32\frac{1}{2}$ per cent. of the inhabitants of the State speak this dialect. Hindi so called is returned as the language of 30 per cent., Bundelkhandi of nearly 12 per cent. and Bhadaori as the mother-tongue of nearly 9 per cent.

There is an unscientific local division of the main dialects of the State into two, *viz.*, Malwi, the language of the Plateau, and Gwaliori, the language of the Lowlying tract.

The inhabitants of the State cannot as a whole boast of speaking any language with great purity. Fault is often found with the Hindi, the Urdu, and the Marathi spoken in Gwalior by persons from the United Provinces, the Punjab, and the Deccan, who visit the State for the first time. The Hindi text-books adopted from the United Provinces for school use present many linguistic difficulties to the rural population. In the towns Urdu is generally understood but this Urdu is not high Urdu and contains many Hindi ords

During the past decade Hindi has supplanted Urdu as the language in use in the law courts but such Hindi consists at present of a large number of Urdu words written in the Devanagri characters. A good deal of the official work of the State is conducted in Marathi but such Marathi is often a mixture of Marathi, Hindi, Urdu, and English words written in *Modi* characters.

None of the State dialects have, in Gwalior, developed any written literature but poems, songs and topical verses are composed in Malwi and Bhadaori are recited in the villages.

Caste and Language.

Subsidiary Table III would seem to show clearly that only a minority of each of the tribes recorded now-a-days speak their particular tribal language. While it is certain that many persons have no clear idea as to the dialect head under which their ***Madri Zaban*** should be classified there is still no doubt that locality rather than caste plays the chief part in determining the dialect of a person in Gwalior. Even at Lashkar where many people speak Marathi there are Marathas and Deccani Pandits who speak Urdu far more fluently than they speak Marathi.

Asiatic and European Languages.

Only 882 persons speak non-Indian Asiatic languages, *viz.*, Persian (633) and Arabic (249). European languages are spoken by 338 persons 334 of whom claim English as their mother-tongue. As, however, only one person returns Portuguese as his vernacular it would seem probable that the figure for persons speaking English as their vernacular is incorrect since it may include a small number of Goanese.

Subsidiary Table I.—Distribution of Total Population by Languages.

CHAPTER X.

INFIRMITIES.

Introductory.

TABLE XII consists of two parts and an appendix. Part I gives the afflicted persons for the State as a whole by age and Part II the total afflicted population and their distribution by *Zilas*. In the appendix can be found infirmities by selected castes, tribes and races. It is on this Table and the Subsidiary Tables at the end of the text that this Chapter is based. As on previous occasions only four kinds of infirmities were recorded, *viz.*, Insanity, Deafmutism, total Blindness and Leprosy. Until the Census of 1901 no record of infirmities was made and hence comparison is only possible in the case of figures for the last two enumerations.

Accuracy of the Returns.

It would be wrong to pretend that the figures for 1911 are very accurate. No doubt they are more accurate than the similar figures for 1901 when the enumerators are reported to have received very little instruction. A feeling of delicacy hinders the enumerators from putting very searching questions to the heads of families about such infirmities as insanity or corrosive leprosy. At the same time the heads of families try to avoid stating the mental or bodily infirmities of members of their families from being recorded. Again insanity and idiocy, Leucoderma and leprosy are probably often confounded, while aged persons who have grown deaf with advancing years may be recorded as deafmutes from birth.

Figures of infrmities.

The actual figures for the years 1901 and 1911 are shown below:—

Infirmity.	1911			1901		
	Total.	Male.	Female.	Total.	Male.	Female.
Insanity ...	203	145	58	165	121	44
Deafmutism ...	645	401	244	873	525	348
Blindness ...	4,537	2,193	2,344	1,951	967	984
Leprosy ...	463	335	128	251	155	96
TOTAL ...	5,848	3,074	2,774	3,240	1,768	1,472

In view of the unreliable character of the figures it is unnecessary to draw any inferences from this comparative statement. Subsidiary Table I which gives the number afflicted per 100,000 of the population for each of the last two censuses would, if the figures were reliable, show that insanity had slightly increased, that deaf mutism was far less common and that blindness and leprosy were twice as frequent in 1911 as in 1901. If the figures for 1911 are at all accurate it is certain that the figures for 1901 must be neglected entirely.

Locality and Infirmity.

Taking the four infirmities by *Zilas* the figures for 1911 would seem to show Mandasor has the greatest proportion of insane males, Narwar of females. Bhind heads the list for males afflicted with deafmutism, Tonwarghar is in the same position as regards deaf mute females. Bhind shows the largest proportion of blind males, Narwar of blind females, Ujjain has more leper males than any other *Zilas*, a fact due to the asylum lately started there in the Canadian Presbyterian Mission. As regards leper females Ujjain and Amjhera are conspicuous. It is not safe to draw any inferenees from these figures for infirmities by *Zilas* nor from similar figures for infirmities by natural divisions. As regards the former set of figures no record is available for 1901 as regards the latter the variation in the figures for 1911 and 1901 is so great as to convince one at first sight that no credence can be placed in those figures.

Sex and Infirmity.

An examination of the figures shows clearly that the infirmities of females have not been recorded in many cases. Insanity and leprosy are doubtless commoner among men than among women but the figures taken from Subsidiary Table III give a result that must be looked on with suspicion.

These figures are as follows:—

Number of females to 100 males afflicted.

Insane 40, Deafmute 61, Blind 106, Leper 33.

The figures for the blind are worthy of notice as it was to be expected that the number of blind females would have been less than the similar number for men.

Age and Infirmity.

The figures given in Subsidiary Table II vary so surprisingly from one age-period to another whether the figures for males or females be taken and also differ so much from the figures for 1901 that comment on anything except the uncertainty of the figures would be a mistake. If any evidence is to be placed in any particular set of figures perhaps the figures for male lepers for 1911 might be considered though the rise in the quinquennial period 50-55 is certainly inexplicable. It is safer to reserve all comments until the next census which at least ought to settle the question whether or not the figures for infirmities are more reliable in 1911 than the same sets of figures for 1901.

Caste and Infirmity.

As regards infirmities Animistic tribes in general and the Minas in particular compare very unfavourably with the other castes. As regards insanity, deafmutism and leprosy the Minas come first. As regards blindness if we *except* a more or less artificial figure for a caste with a very few members the Minas again are unfortunately conspicuous.

Among Brahman the Bhagors show an unenviable record for each of the four infirmities classified.

Among Musalman the Shaikh would appear to be more afflicted with insanity, deafmutism, blindness and leprosy than the Syed.

Subsidiary Table I.—Number afflicted per 100,000 of the population at each of the last two Censuses.

CHAPTER XI.

CASTE, TRIBE OR RACE.

Introductory.

IN Table XIII will be found the names of the castes returned with the strength of each. There can be little doubt that the returns are more accurate than they were in 1901. Happily on this occasion the classification adopted in the case of caste was that of traditional occupation instead of classification by social precedence on unsatisfactory method which did not encourage persons to give correct details in column 8 of the schedule.

Scope of the Chapter.

It is not proposed here to discuss the various conflicting theories as to the origin and growth of caste, nor even to explain caste by some such non-committal definition as that given in the Census Report of 1901. This Chapter will confine itself in the main to an examination of the figures given in the Subsidiary Tables.

Prominent Castes.

As regards numbers the following castes are most prominent in the State:—

Chamars	...	...	363,000
Brahmans of various kinds	...	...	301,000
Rajputs of various kinds	...	...	290,000
Banias of various kinds	...	...	170,000
Kachhis	...	...	155,000
Gujars	...	...	118,000
Ahirs	...	...	112,000

No other caste numbers over 100,000.

It is, of course, obvious that such terms as Brahman, Rajput or Bania are the designation group and not caste names and include a large number of real castes.

Variation in Caste.

Subsidiary Table II gives the variation in caste since 1901. The figures, however, are so extraordinary in many cases as to make it patent that either in 1911 or in 1901 the enumerators must have been guilty of grave errors. From the figures available it will be seen that the Bagri caste has increased 246 per cent. in the decade under review. The Bagris are a wandering tribe which must have suffered badly in the famine of 1900, but still it is hardly credible that this caste, which in 1901 number 3,000 persons, has now risen to 11,000.

The figures too for Bharuds would point to faulty enumeration in 1901. In 1911, 22,000 are recorded in 1901 only 429. No doubt in 1901 the majority were grouped under Ahirs. The decline of over ninety per cent. in the figures for Bhilala or the increase of one hundred and seventy-nine per cent. in the case of Dangis also need to be viewed with suspicion.

Caste Government.

All the chief Hindu castes in Gwalior are controlled by *panchayats* or committees. Amongst the higher castes there is a tendency for the influence of the *panchayat* to grow less as education spreads and a man learns to reason for himself. Among some of the lower castes where possibly *panchayats* are a late growth and a copy of the social institutions of higher castes the influence of the *panchayat* is increasing. In certain cases the *panchayat* committee resembles the managing committee of a trade union and forbids any member of the caste to work for a particular person who has made himself obnoxious to the caste.

Caste Restrictions.

With the growing disuse of a distinctive caste dress has come a relaxation of caste restrictions. This slackening of old caste ties and customs is proceeding very rapidly in the neighbourhood of the capital, but not so fast elsewhere. As a whole the population of the Malwa Prant would seem to be more scrupulous in their obedience to caste restrictions than are those who dwell in the Gwalior Prant.

Caste and Occupation.

Agriculture claims members from all castes in the State and the figure for the traditional cultivating castes which is only 23 per cent. or so of the total population is likely to be misleading. The herding of cattle has on the whole remained in the hands of the castes to whom this duty traditionally belongs. Ahirs, Gadarias, and Gaolis form something less than 7 per cent. of the total population.

Traders form over five and a half per cent. of the population. The figures for both Banias and Bohras have increased during the past intercensual period. Craftsmen under which head are included Darzis, Kolis, Sutars, Silavats, Kumhars, Lohars, Sonars and certain less known castes form a little over 8 per cent. of the whole population.

CHAPTER XII.

OCCUPATION.

Introduction.

TABLES XV and XVI give the statistics of the occupation or means of livelihood of the people. In the Subsidiary Tables at the end of this Chapter the main facts contained in the Tables are given in condensed forms.

The scheme of classification adopted in 1911 for occupation was an improvement on the scheme adopted in 1901. The present scheme is far simpler, being that recommended by the International Statistics Institute adopted to Indian conditions and admits of a fairly correct comparison being made between Indian statistics for occupation and those of other countries.

General Distribution by Occupation.

The four classes into which occupations are divided are the production of raw materials, the preparation and supply of material substances, public administration and the liberal arts and miscellaneous. The first class includes not only those whose occupation is agriculture but also those making a living by fishing, hunting, forestry and the extraction of minerals. In the second class are to be found the commercial and industrial population together with transport workers. The third class is made up of members of the army or police force, those engaged in public administration or pursuing legal, medical and other professions and liberal arts and persons of means living on their income. Under the fourth class "Miscellaneous" are grouped domestic service, insufficiently described occupations, and unproductive means of livelihood. Agriculture supports 63 per cent. of the population, industries and commerce 21 per cent. and professions 6 per cent. From the above figures it will be seen that as regards occupation there is nothing that approaches agriculture as a means of livelihood. Commerce and industry are not far advanced, while the number of persons who live by the exercise of a profession is very small indeed.

Agricultural Population.

From Subsidiary Table VII (selected occupation in 1911 and 1901) are given the various forms of livelihood connected with agriculture and the percentages of variation in the figures of the last two censuses. The total number supported by exploitation of the surface of the earth in 1911 was 1,956,894 persons as compared with 1,652,795. To take some of the sub-divisions of the agricultural population into consideration there is a drop of 50 per cent. or so in the number of those supported by incomes from the rent of agricultural land, there is a large increase in the number of ordinary cultivators, which is a satisfactory sign and far more hopeful than another large increase, namely, the increase in the number of farm servants and field labourers. This latter class numbers 445,319 in 1911 as compared with 267,734 in 1901. It is a class that shows the pinch of famine first of all and as a rule is physically weaker than the ordinary cultivator. As a rule the farm servant and field labourer is the cultivator who has failed either through incapacity or bad luck. He is a greatest believer in the theory that everything is settled by fate the decrees of which individual effort cannot modify

Next in numerical importance but far behind the agricultural population both in importance and in strength comes the industrial population. It numbers 435,378 persons as compared with 303,311 in 1901. The mainfold occupations connected with cotton ginning, cleaning, pressing, spinning, sizing and weaving all show a large number of recruits. Wool carders and spinners also show a big increase per cent. but the numbers engaged in the woollen industry are still small.

If the figures are at all accurate there is a lamentable decline of from 9,317 persons to 4 under head 35, *viz.*, Bone, Ivory, Horn, Shell, etc., workers. It is more probably that the enumerators were in fault in this case both in 1901 when the number was too large and in 1911 when the number was too small. There are satisfactory increases among workers in wood such as carpenters, sawyers, etc., and also among basket makers.

The forging and rolling of iron would seem to have almost died out as was to be expected. Gwalior has not as yet found the natural resources which would make it possible for her to compete in this respect with more favoured localities. Workers in brass, copper and bell metal have increased by more than 150 per cent. in the past decade. With the gradual growth of wealth among the people the use of metal vessels is becoming usual among even the lowest and poorest sections of the community. Boot, shoe, and sandal makers show a large increase in numbers.

Commercial Population.

In 1911, 206,452 persons were supported by trade as compared with 188,416 in 1901. Commerce is not at all highly developed in the State. These figures do not include those persons whose occupation is classed under the head of transport. As a whole the figures giving the numbers following some special trade or group of trades are so variable as compared with the figures for 1901 that one is led against one's will to suspect the accuracy of the figures in 1901. Taking for example the figures for grocers and general condiment dealers we see that the numbers have risen from 625 in 1901 to 18,894 in 1911. Traders in skins and leather have according to the figures before us fallen from 12,548 in 1901 to a mere 929 in 1911. The last total is ridiculous and too low for a single *Zila* leave alone the whole State. The number of Bank managers, money-lenders, exchange and insurance agents, money changers and brokers and commission agents and their employees, to quote a rather fearsome heading, has largely declined. This is not a good sign as the fewer the money-lenders the higher the rate of interest to be paid by borrowers. On the other hand, the figure for dealers in grain and pulse have risen largely and such men as a rule are money-lenders. As a whole the rate of interest is growing less and various bankers of Lashkar and Ujjain finding it impossible to employ all their surplus wealth in loans have gone for modern machinery and mills. Cotton presses and gins are springing up all over the State but the number of spinning and weaving mills is still small.

Public Force and Public Administration.

The public force has largely increased chiefly owing to the inclusion of 26,054 village watchmen who do not appear under this head in 1901. The figures for public administration, on the other hand, show a distinct decline standing in 1901 at 61,393 as compared with 75,982. The figures are still extraordinarily high.

Other Forms of Occupation.

Persons living on their Income, domestic servants and professional men all show large decreases in numbers and such decreases are not satisfactory. Similar decreases under the two heads, insufficiently described occupation and unproductive, are far more satisfactory, though in one of the sub-divisions of the productive class, namely, inmates of jails, asylums and hospitals, there is a large increase.

Female Occupation.

The figures for actual workers show a total of 565,602 female workers as compared with 1,054,220 male workers. In other words, there are 53 females who work for every hundred males. A cursory glance at Subsidiary Table VI shows that women do not predominate in numbers over men in many occupations but that in the wood trade, in the sale of cardamom, betel-leaf, vegetables and fruit and in occupations insufficiently described considerably more women than men are engaged.

TABLE I.

AREA, HOUSES, AND POPULATION.

THIS Table shows the number of towns and villages, the number of occupied houses and the total urban and rural population by sexes for each Pargana comprised in the Zila and also similar figures for areas under British control, as well as for the guaranteed estates held wholly or partly from the Darbar. The figures include population on Railways traversing Gwalior State territory.

2. Zilas have been arranged by the two main divisions into which the State has been administratively divided, *viz.*, Gwalior and Malwa Prants. The figures of Lashkar City, the capital of the State, have been included in the Gird Gwalior Zila, in this Table as well as in Tables II, III, and VI.

3. The increase in area of the State Proper as compared with that recorded in 1901, is due to the inclusion of the guaranteed estates of Maksudangarh and Kamalpur which have lapsed, and to the Gwalior Residency villages reverted to the Darbar.

4. A large increase in the number of houses is perceptible. This is due to more rigid adherence to the definition of the House adopted on this occasion.

5. Some difficulty was experienced in arriving at the figures for the Natural Divisions, as no detailed statistics of 1901 were preserved. An extra column has, therefore, been provided in this Table giving them. The figures for Natural Divisions are shown below:—

Natural Divisions.	Area.	Towns	Villages	Occupied Houses.	Population.		
					Total.	Males.	Females.

NOTE.—As the Estates Nos. 3, 5, 10, 14, 15, 15, 22, and 24 hold only a few villages from this Durbar, their area has been included in the Parganas in which they are situated.

TABLE II.

VARIATION IN POPULATION SINCE 1881.

THIS Table shows the variation in population at the three previous Censuses. Figures for Zilas for 1881 and 1891 are not available. Those for 1901 have had to be adjusted to compare with the figures of Zilas for 1911 owing to re-organization during the last decade. The total population for 1901, 1891 and 1881 increases by 16,072, 15,003, and 14,511, respectively, due to the inclusion of two Guaranteed Estates lapsed, and the Residency villages reverted, to the Darbar as stated below:—

Particulars.	1901			1891			1881

TABLE III.

TOWNS AND VILLAGES CLASSIFIED BY POPULATION.

THE number of villages as shewn in this Table is not accurate as the Census villages do not agree with those obtained from local officers. Attempts are being made to make the two agree and a supplementary table will be published. The figures for Natural Divisions are given below :—

Natural Divisions.	Total Villages and Towns.	Population.	NUMBER OF VILLAGES & TOWNS.						
			Under 500	500-1000	1,000-2,000	2,000-5,000	5,000-10,000	10,000-20,000	20,000-50,000
State Proper ...	**10,403**	**3,101,874**	**9,056**	**933**	**317**	**77**	**14**	**4**	**2**
Lowlying ...	3,150	1,213,524	2,521	410	176	35	5	2	1
Plateau ...	6,717	1,768,575	6,036	499	134	36	9	2	1
Hilly	536	119,775	499	24	7	6	...	...	...

TABLE IV.

TOWNS CLASSIFIED BY POPULATION WITH VARIATIONS SINCE 1881.

THERE were 25 towns in 1901 of which Karahia and Mungaoli have been omitted this time owing to their having lost in importance and population, while the towns of Sipri and Morena, which are growing, the former being the summer residence of His Highness the Maharaja, and the latter a great trade centre, have been added to the list of towns. The British Cantonment of Nimach and the Military Stations of Guna and Agar situated in the State have also been shewn in this Table. The figures for earlier periods in some cases could not be ascertained.

The population of Lashkar City and Lashkar Brigade was enormously reduced owing to the prevalence of plague on the Census night. These localities were accordingly recounted on the 8th July 1911, the figures of both enumerations are given below :—

	LASHKAR CITY			LASHKAR BRIGADE.		
	Persons	Males.	Females.	Persons.	Males.	Females.
Actual Census.	46,952	24,245	22,707	9,235	6,288	2,947

TABLE VII.

AGE, SEX AND CIVIL CONDITION.

THIS Table is divided into three parts. *Part A* shews the distribution for the State as a whole, of the total population and of each religion by age, sex and civil condition; *Part B* gives the distribution for the Zilas by religion, age, sex and civil condition; while *Part C* shows similar figures for the Lashkar City separately, although they have been included in the Gwalior Gird Zila.

TABLE VII.—Age, Sex and Civil

TABLE VIII.

EDUCATION BY RELIGION AND AGE.

THIS Table shews the number of persons returned as literate, illiterate and literate in English among the total literate population by each religion and four age periods. It, like Table VII, is divided into three parts. *Part A* gives information for the State as a whole, and *Part B* for each Zila, while *Part C* deals with the City of Lashkar.

TABLE VIII.—Education by Religion and Age, Part A.—State Summary.

* The figures for Lashkar City are included also in the Gird Zila figures.

TABLE XI.

BIRTH-PLACE.

THIS Table gives the information for birth-place of the persons censused in the State as a whole as well as the Zilas where enumerated.

The figures for Gwalior Gird Zila include those for Lashkar City shewn separately.

TABLE XI.—

Birth-place.	Total Population.			ZILAS WHERE									
				Gird Gwalior.		Bhind.		Tonwarghar.		Sheopur.		Narwar.	
	Total.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.

TABLE XV.

OCCUPATION OR MEANS OF LIVELIHOOD.

IN 1901, all occupations were divided into 24 Orders and 520 Groups. On the present occasion a new scheme of classification based on the theory of M. Bertillon, a well known European Statistician, was adopted. This scheme contains 4 classes 12 Sub-classes, 55 Orders and 169 Groups.

The statistics of occupation are comprised in four tables as follows:—

Table XV-A—This is a general table of Occupation or Means of Livelihood for the whole State as also for Zilas and Lashkar City.

„ **XV-B**—Subsidiary occupations of agriculturists (actual workers only) in three parts:—

(1) Rent Receivers (landlords, &c.).

(2) Rent Payers (actual cultivators).

(3) Farm Servants and Field Labourers.

„ **XV-C**—Showing for certain mixed occupations the number of persons who returned each as their (A) Principal (B) Subsidiary Means of Livelihood.

„ **XV-D**—Occupations by Religions showing actual workers and dependents together for both sexes.

TABLE XV-A—OCCUPATION

GWALIOR STATE.

TABLE XVI.

OCCUPATION.

By selected Castes, Tribes or Races.

THIS table gives statistics for the occupations of certain selected castes, tribes and races. The occupations are arranged under 12 main heads corresponding to the sub-classes of the scheme of classification given in Table XV—A, and have been sub-divided where necessary in order to distinguish between occupations of persons in the service of Government and those of Native States. Cols. 9, 10, 11 and 12 throw light on the extent to which traditional caste occupations are followed while cols. 13 and 14 are intended to make it possible to discount the tendency of fnnctional castes to return their traditional occupations as their principal means of livelihood. The figures in cols. 15 onward are exclusive of those shown in cols. 9 and 10. Astericks have been put against the figures in those columns which are affected by this arrangement.

TABLE XVI.—OCCUPATION

Caste, Tribe or Race.	Traditional Occupation.	POPULATION DEALT WITH.						NUMBER OF ACTUAL WORKERS WHOSE TRADITIONAL CASTE OCCUPATION WAS RETURNED AS THEIR.				NUMBER OF ACTUAL WORKERS RETURNING THEIR TRADITIONAL OCCUPATION AS THEIR PRINCIPAL OCCUPATION OR LIVELIHOOD WHO HAD SOME SUBSIDIARY OCCUPATION

TABLE XVII.

TERRITORIAL DISTRIBUTION OF THE CHRISTIAN POPULATION BY SECT AND RACE.

THIS Table shows the sects and races of the Christian population for the State as a whole and for each Zila.

2. The term "Anglo-Indian" is used for "Eurasians" in the present Census as decided by the Government of India.

3. In the last Census 2 males and 1 female returned themselves to be Indefinite Belief; this time none has returned to be so.

4. Following five more sects are found to be returned in this Census:—1 Baptist, 2 Greek, 3 Methodist, 4 Lutheran, 5 Protestant.

5. The Sheopur Zila has been omitted from this Table, as no Christian was enumerated there.

TABLE XVIII.

EUROPEANS AND ANGLO-INDIANS BY RACE AND AGE.

THIS Table shows the distribution of Europeans and Anglo-Indians, of total Christians for the State as a whole and for each Zila.

2. In Sheopur and Shajapur Zilas no European or Anglo-Indian has been enumerated, both the Zilas therefore have been omitted from this Table.
