CONTENTS.

CHAPTER I.

GENERAL DESCRIPTION.

PAGE

Geographical and physical description. Climatic conditions. Area and population. Density. Administrative divisions. Agricultural statistics in relation to population. House accommodation. Towns and villages. Areality. Urban and rural proportions. Amraoti. Ellichpur. Akola. Badnera. Karanja. Khamgaon. Shegaon. Akot. Basim. Anjangaon. Balapur. Urban religions. Mahomedan towns. Jains, Parsis, Christians. . . . . .

CHAPTER II.

MOVEMENT OF THE POPULATION.

Variation since 1881. Nature of growth; vital statistics and migration. Local variations. Villages. Talukas. Districts. Proportions of indigenous population. Inter-provincial migration. Immigration. Decrease in Akola. Increase in other districts. Sketch of the history of the province since 1881. Progress of the revenue. Increase of trade and manufactures. Extension of roads and public works xi

CHAPTER III.

RELIGIONS.

Distinction between Hinduism and Animism. Distribution of Hindus. Distribution of Mahomedans. Their variation. Jains. Christians. Christian sects and races. Parsis. Sikhs. Others. The Animistic. Their distribution. Incongruities xxv

CHAPTER IV.

AGE AND SEX.

General considerations. Proportions of the sexes. Urban conditions. District and taluk conditions. Conditions in religious communities. Proportions of the sexes at different ages. District conditions. Among religions. Comparison with England and Wales. Excess of female children. Measure of error in the vital statistics. Age distribution of each sex. Among religions. Among local divisions. Proportion of the working population. Mean age xxxiv

CHAPTER V.

CIVIL CONDITION.

Social aspect of marriage. Proportions of both sexes in each condition. Comparison with other countries. Proportions in local divisions. Among religions. Distribution by condition at each age period and by age in each condition. Gradual diminution in numbers of unmarried at each age. Comparison with India and Europe. Mean age in each condition. Characteristics of local divisions. Among religious communities. Relative conditions of the sexes generally, and by age. Local differences. Relative conditions among certain castes l

CHAPTER VI.

INFIRMITIES.

General considerations. Actual numbers. Comparison with 1881. Comparison with other countries. Distribution by age. Relative proportion of the sexes. Local conditions. Relative proportions among castes lxii

CHAPTER VII.

EDUCATION.

Proportions. Illiteracy of Berar. Comparison with other countries. Under-statement of those "learning." Proportions according to religion. Proportions in school-going age. Local conditions. Increase of schools. Relative condition among castes. Knowledge of English lxix

CENSUS OF INDIA, 1861.

VOLUME VI.

BERAR,

OR THE

HYDERABAD ASSIGNED DISTRICTS.

CHAPTER I.

GENERAL DESCRIPTION.

VERY few persons outside the province know where Berar is or what it is. This is not very surprising, as its existence as a separate entity dates only from 1853, and it has done nothing since to acquire any notoriety. It is essentially a rural area, a succession of fields of cotton or *jowari*, or of tracts of unculturable waste and jungle. Archæologically or historically it possesses nothing of much interest or importance; artistically or scientifically it is absolutely barren; in material and industrial concerns it is barbarous and rude. Its only claim to fame lies in the cotton market, where the name of Oomras or Oomrawattees refers in uncouth and archaic form to the chief product and the chief mart of the province. It may be as well then to explain that geographically Berar occupies a position which may be regarded as the navel of India, and that it is a slice off the northern portion of the territory of the Nizam of Hyderabad, assigned for certain specific purposes to the British Government under the Treaties of 1853 and 1861, whence is derived the official designation of the Hyderabad Assigned Districts.

The following general description is extracted from the *Berar Gazetteer*, published in 1870:—

Geographical and physical description.

Berar forms the northernmost portion of the Hyderabad State, running up from the south with a breadth gradually narrowing until an extreme point touches the Tapti river, half surrounded on the east, north, and north-west by the Central Provinces, and meeting the Khandesh district of the Bombay Presidency along a section of about 40 miles of its western border. The Gawilgarh hills, a range belonging to the Satpura mountains, form the geographical boundary of Berar on the north, with a deep indent made by the Melghat tract; on the east its frontier is marked accurately by the Wardha river down to its confluence with the Painganga, and on the south by the Painganga for about two-thirds of the frontier's length. On the west the border is merely an artificial line cutting across a broad valley from the Satpura mountains to the hills on which stands Ajanta, and proceeding southward over these hills until it turns eastward by a sharp angle near Jalna.

This Ajanta range intersects the whole province from west to east, and its steep ridge divides the interior geography into two systems. Setting aside the Melghat mountain tract as abnormal, we have two distinct sections of Berar, the *Payanghat*, or lowland country, bounded on the north by the Gawilgarh hills, and on the south by the outer scarps of the Ajanta range; and the *Balaghat* or upland country above the Ajanta ridge, sloping down southward beyond the ghâts or passes which lead up to it. So that the Payanghat is a wide valley running up eastward between this ridge and the Gawilgarh hills like a long backwater or deep bay, varying in breadth from 40 to 50 miles, and broader towards the end than at its mouth. The surface of this valley is not flat or even; it rises

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

and descends by very long, low waves with their troughs cutting mostly north and south flowing up eastward to a point just beyond Amraoti; here this formation is broken up by a chain of low hills that run in a north-westerly direction across the plain. These hills mark a change in the country's watershed. Westward of them the main slope of the valley is towards the west, from the point where the Purna river makes almost a right angle by its sudden turn; but eastward of Amraoti the streams take an opposite direction, and their course is to the Wardha or some of its affluents.

The Payanghat valley contains all the best land in Berar; it is full of that deep rich black alluvial soil called *regar*, of almost inexhaustible fertility, and it undulates just enough to maintain a natural system of drainage, which is probably very favourable to the productive powers of the land. Here and there are barren tracts, where the hills spread out ample skirts far into the plain, covered with round stones and scrub jungles; or where a few outlying flat-topped hills, often with hummocks or humps looking like huge cairns on their crown, stand forward beyond the ranks to which they belong. But there is nothing picturesque about this broad strip of alluvial champaign country; it is very destitute of trees, except near the villages close under the hills; and besides the Purna it has hardly a perennial stream. In the early autumn it is one sheet of cultivation, and looks fresh enough, but from the beginning of the hot season, when the crops have been gathered, its generally monotonous plain is relieved by neither verdure, shade, nor water, and the landscape is desolate and depressing.

However, the aspect of the country above the passes which lead to the Balaghat is quite different. Here is the extreme northern limit of the tableland of the Deccan; the sides and summits of the outer hills are covered with low forest; from their crests the main slope of the land is southward; wide basalt downs follow each other in successive expanses of open fields sloping down to narrow channels, which carry off the water like gutters between two parts of a low roof. The trees are finer and the groves more frequent than in the valley below; water is more plentiful and nearer to the surface. This is the character of much of the Balaghat highlands in the west of Berar, where they fall southward toward the Nizam's country by gradual decline, and by a series of ridges or steppes. But the whole face of the Balaghat has no uniform feature; it stretches into downs and dales where it is most open; then it gets broken up into flat-topped hills and steep ravines; while in its eastern section the country is still more sharply accidented by a splitting up of the main hill range, which has caused a variety of low-lying plains, high plateaus, fertile bottoms, and rocky wastes.

The Melghat tract referred to here as abnormal consists of a rugged mountainous country, the hillsides and valleys forming extensive forests, and the tops stretching out into wide plateaus and open downs, the highest points of which are attained in a steep ridge on the south immediately facing the Payanghat plain. The old historic fort of Gawilgarh dominating the town of Ellichpur stands at an elevation of 3,500 feet. Behind it the plateau of Chikalda, the sanitarium of Berar, rises to some 200 feet higher; and further to the west the top of Bairat attains about 4,200. The Ajanta range on the south of Berar is of an entirely different character. The aspect is nowhere mountainous; the elevation at the highest point in the west towards Buldana does not probably exceed 2,000 feet; and, were there a good road, one might drive a team of horses from one end to the other without having to put on the break or to complain of the collar work.

The Payanghat valley itself stands at a considerable elevation above the sea, from about 800 feet on the west to 1,200 on the east, and this has to be remembered in considering the heights of the hill ranges.

Briefly, then, Berar consists of three distinct tracts—the mountainous forest region on the north, the wide plain stretching from west to east across the middle, and the more or less broken upland on the south. It will be seen in the following pages, in the consideration of the statistics furnished by the census, that the distinction between these three regions is not confined to their physical features. Between the inhabitants of the southern uplands and those of the central plain there is perhaps no very striking diversity, but the people of the Melghat differ from the rest in religion, in language, and in every aspect of social life.

Climatic conditions.

Among other influences which affect the economy of mankind, climatic conditions are not unimportant, and some description of these may be desirable. The rainfall has as yet been registered with any reliable accuracy in only a few places, and there are not sufficient data to generalise with certainty upon the character of its distribution. The following averages at the registering stations named have been furnished by the Meteorological Reporter to the Government of India:—

	Inches.
Chikalda	68·84
Makhla	72·19
Ellichpur	30·57
Amraoti	33·15
Akola	31·00
Buldana	33·81
Basim	38·62
Yeotmal	43·07
Wun	41·73

Of these stations, Chikalda has been already mentioned as occupying one of the highest plateaus of the Gawilgarh range. Makhla is another hill-top a few miles to the north-east of Chikalda. Ellichpur lies at the foot of the range. Amraoti and Akola are centrically situated between the two hill ranges towards the east and west respectively of the valley. Buldana stands on one of the most elevated plateaus of the Ajanta range at the west, and Basim is towards the centre and Yeotmal at the east of the same line of hills, at the foot of which, on the south-east, near the junction of the Wardha and Painganga rivers, lies the town of Wun. The figures quoted accordingly appear to indicate that in each of the three regions the heaviest rainfall is in the east. The rainy season of Berar is, however, that of the south-west monsoon, and it would be natural to expect that the heaviest fall, other things being equal, would be in the west. Chikalda, to the west of Makhla and at a higher elevation, should catch the heavier fall; Akola should have more than Amraoti; Buldana should have much more than Yeotmal, standing as it does at a much higher elevation and having the advantage of perhaps 125 miles in the distance from the sea; Wun, lastly, shut off by the uplands from the west and north-west, should have least of all. The explanation of this apparent contradiction may be in the possible fact that the east of Berar is more within the influence of cyclonic and other disturbances from the Bay of Bengal. Certain it is that a large proportion of the annual rainfall is frequently due to these causes. So far, however, as regards the three distinct tracts into which the province divides itself, the rainfall is consistent with what might be expected; the heaviest fall is in the Gawilgarh hills, and the lightest in the central plain. In other climatic conditions also the three tracts have marked distinctions. In the Gawilgarh hills, while the upper plateaus enjoy a moderate and equable temperature, the valleys suffer from extremes of heat in the day and of cold in the night, and are notoriously unhealthy except during the dry months of the hot season. In the plain at that season of the year the heat is excessive, and the temperatures registered at Amraoti and Akola in the months of March, April, and May are frequently the highest of the day in India. In the southern tract the temperature takes a middle place between that of the other two; it is not so hot as in the plain during the hot weather, and during the rest of the year it is not subject to the damp and the extremes of heat and cold of the valleys in the Melghat.

Area and population.

The area of Berar, according to the latest surveys, is 17,717·87 square miles. In the report of the census of 1881 it is given as 17,711, but the increase is due to corrections of measurement and not to any addition of territory.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

The census was taken on the 26th February 1891, when the population was found to be 2,897,491. The census of 1881 was taken on the 17th February, and the increase of population in the interval of ten years and nine days has been 224,818, or 8·41 per cent.

Density.

The number of persons per square mile is 163; in 1881, the number was 151. Berar is more closely populated than either Scotland or Ireland. It is a little larger in area than both Denmark and Switzerland, and it is intermediate between the two in the density of its population. Of the British Colonies, Berar may be best compared with Ceylon, which is somewhat larger in area, but where the population is only a little more than three millions and the density 118. In extent of area Berar has no affinity to any other Indian province or state, but in population it is rather larger than Sindh, Kashmir, and Baroda, and somewhat smaller than Upper Burma. In density of population it cannot compare with Oudh, Bengal, the North-West Provinces, or Madras, but it approaches that of Mysore (176) and the Punjab (189). It is, however, more thickly populated than the State of Hyderabad (140) on the south, the Central Provinces (125) on the east, and the Khandesh district (134) of the Bombay Presidency on the west.

Administrative divisions.

The province is divided, for administrative purposes, into six districts and twenty-two taluks. Of the taluks, twelve comprise the central plain and nine the southern uplands, while the Melghat hill tract constitutes one in itself. Of the taluks of the plain, the four easternmost form the Amraoti district; two on the north, together with the Melghat, make up the district of Ellichpur; five in the centre and north-west compose the Akola district; the last, on the extreme west, Malkapur, belongs to the district of Buldana, which is completed by the two westernmost of the southern hill range; the three central taluks of these form the Basim district, and the remaining four in the south-east the district of Wun. The districts thus divide themselves into three northern—Amraoti, Akola, and Ellichpur; and three southern—Buldana, Basim, and Wun; and this distinction the statistics of the population will be found not infrequently to preserve.

Table I (page 2) shows the area, houses, and population of each district and of each taluk. The total population of the districts arranged in order of numbers is here reproduced. Amraoti, it will be seen, has more than twice the population of Ellichpur.

Amraoti	655,645
Akola	574,782
Buldana	481,021
Wun	471,613
Basim	398,181
Ellichpur	315,798

	Sq. miles.
Wun	3,911·23
Basim	2,955·92
Buldana	2,808·81
Amraoti	2,759·20
Akola	2,659·39
Ellichpur	2,623·32

Arranged in order of area the districts come as follows. Wun largely exceeds all the other districts in size, while the difference between each of the latter is not very great.

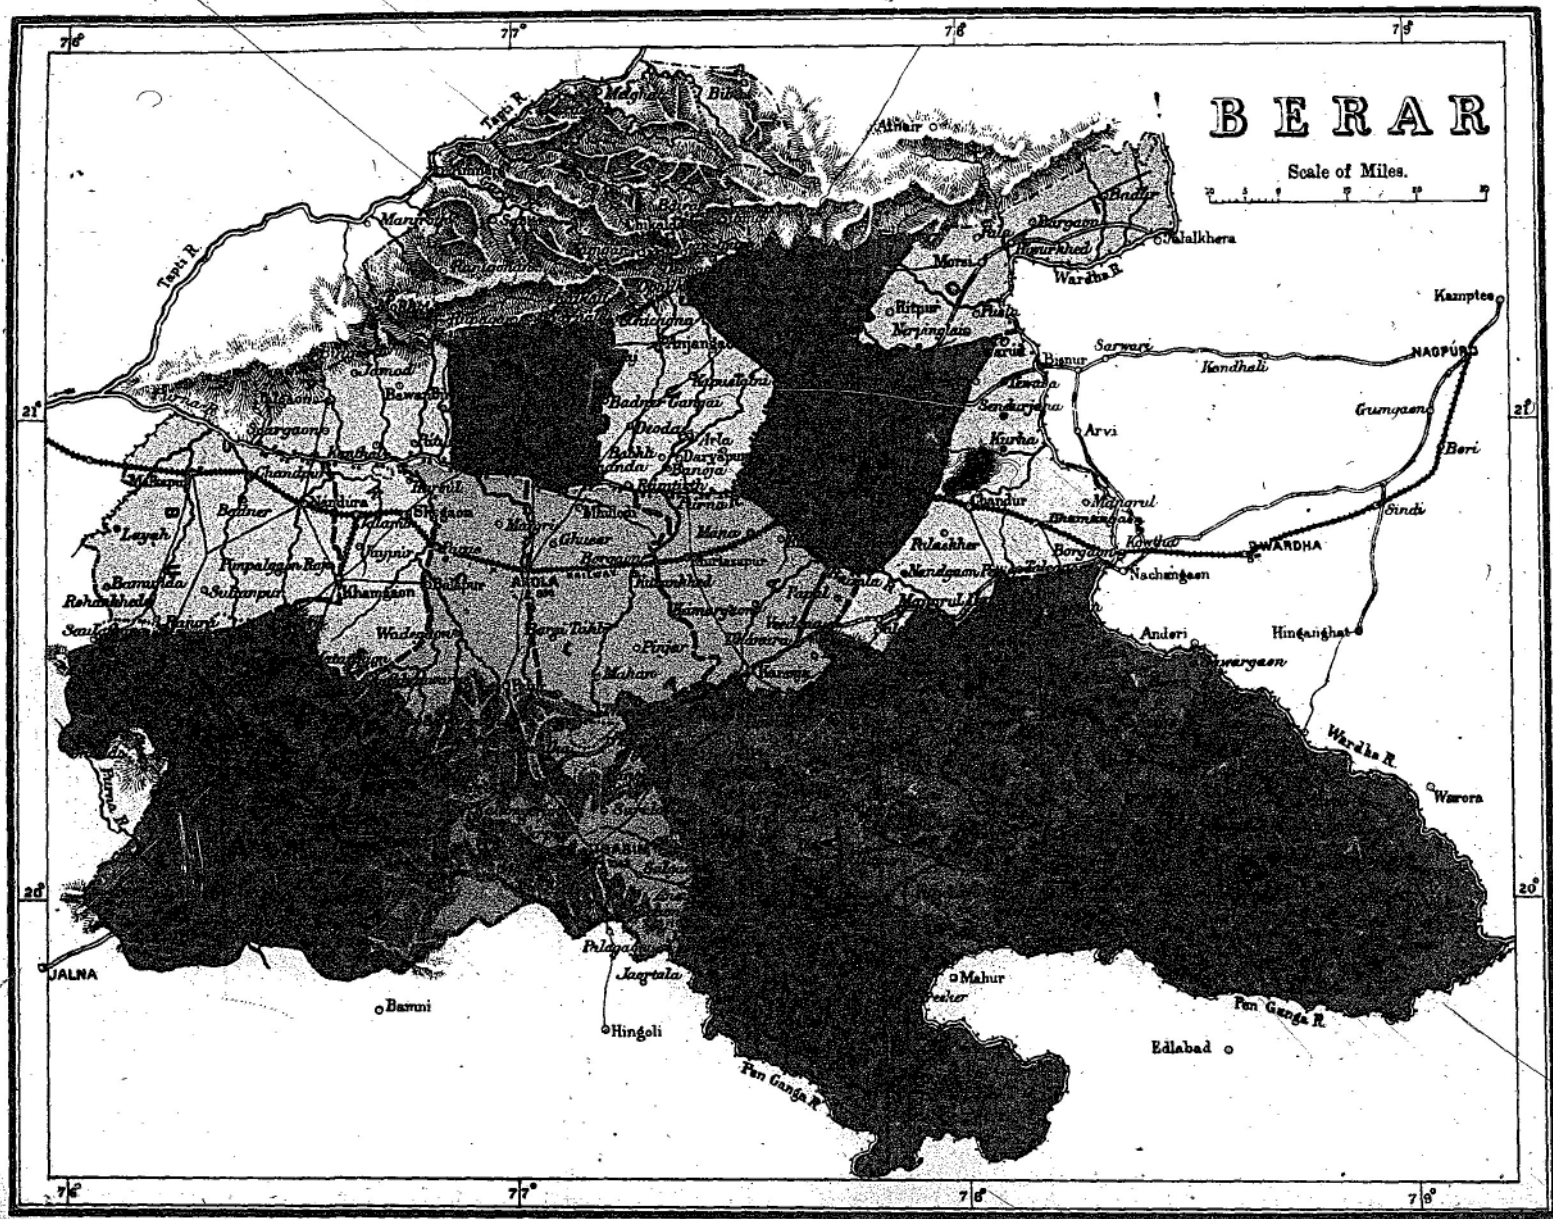

The density of the population in each district is shown in the adjoining statement, No. 1. Here the density in Amraoti is seen to be almost twice as great as in Ellichpur, but the average in the latter district is reduced by the abnormal Melghat taluk, which has an area of 1,649 square miles and a population of only 47,031. Eliminating the Melghat figures, the density for the remaining portion of the Ellichpur district is as high as 275.

Statement No. 1.

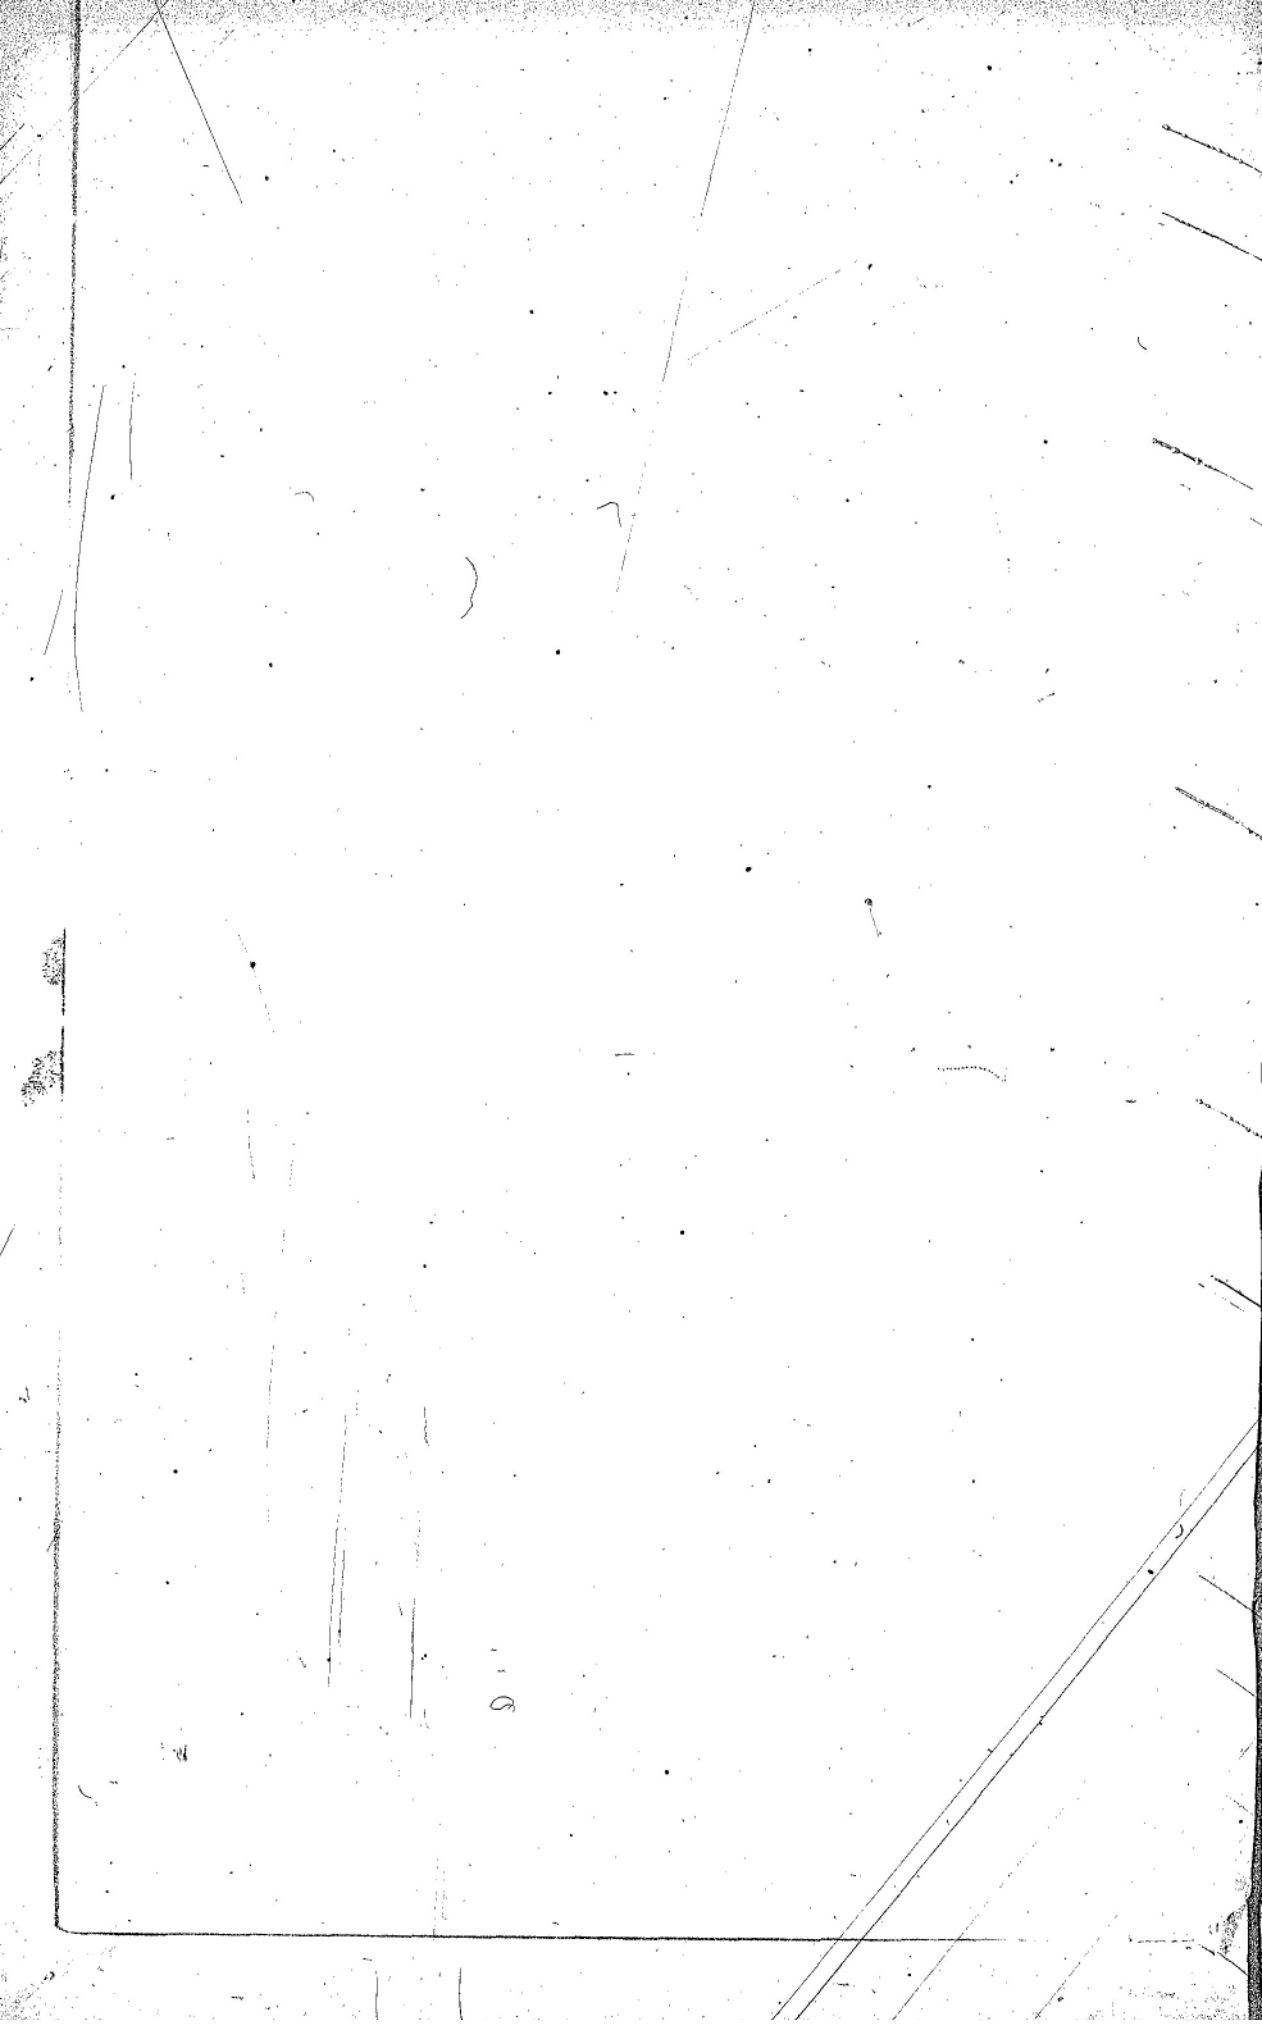

District.	Number of persons per square mile.		Variation since 1881.
	1891.	1881.	
Amraoti	237·6	208·5	+29·1
Akola	216·1	222·8	−6·7
Buldana	171·2	156·8	+14·4
Basim	134·3	121·3	+13·0
Wun	120·5	100·4	+20·1
Ellichpur	120·3	119·6	+·7

It was observed in Mr. Kitt's Report on the Census of 1881 that the districts in Berar approximated closely in size to some of the English counties, Amraoti being three square miles smaller than Lincolnshire, and Akola and Ellichpur each rather larger than Devonshire. In density, however, Amraoti exceeds Lincolnshire, where there are only 171 persons to the square mile. Jamaica strikes the imagination as an island of considerable size, and it certainly possesses an imposing array of administrative officials; yet the area of Jamaica, 4,424 square miles, is not much larger than that of the Wun district, and its population, 585,582, is less than that of Amraoti. For Amraoti some ten or a dozen officers, European and Native, combine between them, with the aid of a sixth part of a Civil and Sessions Judge and of a Judicial Commissioner, to dispose of the entire judicial administration, civil and criminal, besides attending to multifarious other duties of an executive character, while the judicial requirements alone of Jamaica demand a Chief Justice and two Puisne Judges besides several District Judges and stipendiary Magistrates. Cyprus is smaller in area than the Wun district and has a population of considerably less than one-half, and there also the number of executive and judicial officials is comparatively very large. Unless the people of these islands are of a very much more litigious and unruly disposition than those of this province, it would seem that the Berar official is far more heavily worked than his brother of the Colonial services.

Taking now the taluks, Melghat, the hill tract on the north, is by far the largest in area, with 1,649 square miles. Then comes Pusad in the Balaghat range on the south with 1,274.6, and the next eight taluks in size all belong to this tract. Of the taluks of the Payanghat or plain region, the largest is Chandur with 854·97 square miles, and the remainder range down to Jalgaon, with 392·1. In population Chandur comes first with 198,106 and Melghat last with 47,031, and Mangrul last but one with 82,446. The adjoining statement No. 2 shows the density of population in each taluk with that in 1881 and in 1867. It illustrates very clearly the distinction between the three physical divisions of Berar described before. The first twelve taluks in order comprise the central plain, the next nine the upland or hilly region in the south, and the last the mountain tract on the north. The twelve taluks of the plain have an aggregate area of 7184.43 square miles, and an average density of population of 233. The nine taluks of the Balaghat contain an area of 8,884.44 square miles, with a density of 132.

Statement No. 2.

Talus.	Population per square mile.			
	1891.	1881.	1867.	Variation since 1881.
1 Ellichpur	311·6	315·7	289 1	− 4·1
2. Amraoti	273·2	243·2	207·8	+30·0
3. Akot	266·4	278·5	236·8	−12·1
4. Jalgaon	248·9	269·7	212·0	−20·8
5. Morsi	244·8	208·5	208·0	+36·3
6. Daryapur	242·6	243·8	203·6	−·1·2
7. Chandur	231·7	200·7	149·3	+31·0
8. Khamgaon	225·2	218·1	174·0	+ 7·1
9. Malkapur	224·7	213·3	183·6	+11·4
10. Murtazapur	199 3	181·3	171·6	+18·0
11. Akola	186·7	188·7	148·4	− 2·0
12. Balapur	178·7	188·1	155·3	− 9·4
13. Basim	169·4	150·0	116·5	+19·4
14. Mehkar	151·8	130·6	105·0	+21·2
15. Chikhli	148·6	138·8	114·8	+ 9·8
16. Darwha	147·5	125·0	90·1	+22·5
17. Yeotmal	136·9	118·6	97·4	+18·3
18. Mangrul	129·7	120·1	99·6	+ 9·6
19. Pusad	108·6	98·2	71·5	+10·4
20. Wun	98·4	84·8	78·3	+13·6
21. Kelapur	97·9	73·0	67·0	+24·9
22. Melghat	28·5	25·9	24·7	+ 2·6

Map No. 1 illustrates the relative density of the different taluks at the present census, and diagram No. 1 the variation in the density since 1867. For the purpose of classification the taluks have been arranged, and shown on the map in five groups. The first three taluks, Ellichpur, Amraoti, and Akot, may be regarded as *densely* populated, the proportion ranging from 266 upwards. The next six, Jalgaon, Morsi, Daryapur, Chandur, Khamgaon, and Malkapur, form the second group or *fairly densely* populated, the rate ranging from 224 to 248. The third group consists of Murtazapur, Akola, Balapur, and Basim, and is *averagely densely* populated, the range being from 169 to 199.

This content downloaded from

All use subject to https://about.jstor.org/terms

Mehkar, Chikhli, Darwha, Yeotmal, and Mangrul form the fourth group, or *thinly* populated, with a range from 129 to 151. Pusad, Wun, and Kelapur make the last group, or *sparsely* populated, with a range from 97 to 108. Melghat comes by itself last of all as *very sparsely* populated.

			sq. miles.		
The first group contains	an area of	1,657·58	with a density of	282.
„ second	ditto	do.	3,609·05	ditto	235.
„ third	ditto	do.	2,963·72	ditto	182.
„ fourth	ditto	do.	4,622·55	ditto	144.
„ fifth	ditto	do.	3,215·97	ditto	102.

From the map it will be seen that, with the exception of Amraoti, the densest taluks are those which lie at the foot of the Gawilgarh range of mountains, and that the first two groups comprise the taluks of the plain, with the exception of three out of the four central ones of the southern half. It will also be observed that the six taluks whose density has decreased since 1881 comprise four of the densest and two of the contiguous central ones, while the three taluks whose density has increased in the same period in much greater proportion than the rest, that is Morsi, Chandur, and Amraoti, form the eastern portion of the Berar plain.

Turning to the diagram it will be seen that the taluks which have made the most rapid and regular increase in density since 1867 are Chandur and Amraoti in the plain and Darwha and Basim in the upland tract, while all the taluks of the latter region have made a considerable and more or less uniform advance. Of the rest it is curious to note that Morsi, which has the largest increase of all since 1881, was the only taluk which made no appreciable increase in the former period.

The consideration of some agricultural statistics in relation to the population will be now proceeded with.

Agricultural statistics in relation to population.

From the Revenue Report for 1890-91 it appears that the amount of culturable land available for occupation in each district was as follows:—

	Number of acres occupied.	Number of acres available but unoccupied.
Amraoti	1,496,175	10,885
Akola	1,458,316	37,055
Ellichpur (excluding Melghat)	560,141	1,747
Buldana	1,477,069	35,865
Wun	1,382,507	256,044
Basim	1,247,338	69,714

From these figures it is ascertained that for every 100 persons of the entire population, there are in the Ellichpur district (excluding Melghat) 208 acres of land in occupation; in Amraoti 228; in Akola 253; in Wun 293; in Buldana 307; and in Basim 313. The whole area under crop in the province is stated to be 6,697,281 acres, which gives 2·31 acres for each individual of the population. The average in Great Britain under crop and pasture is believed to be somewhat less than an acre per head.

Taking the whole culturable area, in occupation and unoccupied, the density of population per square mile is as follows:—

Ellichpur (excluding Melghat)	305·92
Amraoti	279·04
Akola	245·76
Buldana	203·52
Basim	189·44
Wun	184·32

Comparing these figures with those given in Statement No. 1, of the density

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

proper, it is seen that the relative differences between the districts of the plain, the first three, and the districts of the upland region, the last three, are diminished; that is to say that in the cultivated area there is not so marked a distinction, but that yet even there the southern districts are less thickly populated, and it may be inferred that the lesser density of this region is due both to the larger proportion of unworkable jungle and barren soil, and also to the want of development of the land which is available for cultivation.

The same Report gives the following figures as the number of acres assigned in each district for free grazing:—

	Acres.
Amraoti	52,757
Akola	47,124
Ellichpur (excluding Melghat)	15,665
Buldana	77,288
Wun	357,043
Basim	173,912

and from these it appears that for every 10 acres of free grazing land there are in the Ellichpur district (exclusive of Melghat), 171 persons, in Amraoti 124, in Akola 123, in Buldana 62, in Basim 23, and in Wun 13. There is, therefore, more than thirteen times as much free grazing land to each individual in the Wun district as in Ellichpur.

The number of acres set apart for village purposes in each district are: Amraoti 10,894; Akola 12,903; Ellichpur (exclusive of Melghat) 3,293; Buldana 11,451; Wun 9,019, and Basim 8,294. The average acreage assigned to each inhabited village is, therefore, in Akola 13·2; in Buldana 12·7; in Amraoti 10·5; in Basim 9·9; in Wun 7·3; and in Ellichpur 7·1.

House accommodation.

Table I also shows the number of occupied houses in each district and taluk. Endeavour was made in the preliminary organisation to secure complete uniformity in the interpretation of the term "house," and the following definition was adopted:—

A dwelling place of one or more families with their respective servants, having a separate principal entrance from the common way.

This was not, however, everywhere rightly understood, as will be explained subsequently in the chapter upon the administration of the census operations (see page clix). It is sufficient to note the fact here that the definition was not strictly adhered to in some localities, and that therefore the deductions to be drawn from a comparison of the figures should be accepted with reserve. It will be understood also that the definition is necessarily somewhat artificial, and that a house from the census point of view is not always what the word commonly conveys. A building architecturally one house may consist of several census houses; for instance, the principal tenement of a holding may have attached to it several out-houses in the occupation of the servants of the owner or tenant, and the whole forming one set of premises would be commonly regarded as forming one house, but in the census operations each inhabited out-house would have been regarded as a separate house. The definition also was not confined to buildings, but included any temporary erection of sticks and leaves which was at the time of the census used as a habitation. Under these circumstances it may be open to question whether any value can be attached to the numbers of the houses returned, though no doubt the exceptional cases do not make a very appreciable difference in the aggregate results. This reservation, however, will not apply to the consideration of individual towns and villages, nor will it be safe to place much reliance upon a comparison of the figures of this and the last census, when the term house included "garhis," or village forts, and enclosures, each of which frequently consisted of a number

This content downloaded from

All use subject to https://about.jstor.org/terms

of buildings which have been, or should have been, regarded on the present occasion as separate houses.

Statement No. 3 gives the number of persons per house in towns and villages for each taluk and also the number of houses per square mile. In towns the number of persons per house varies from 4·1 to 6, and in villages from 4·3 to 5·9. The density of the houses, as might be expected, approximates more or less with the density of the population, and there is a marked difference between the taluks of the plain and the remainder, Balapur, the lowest among the former, having 38·5 houses to the square mile, and Basim, the highest of the latter, having only 30. In Pusad, Melghat, Mehkar, and Basim, the house accommodation appears to be the least and the people most crowded, and in Akot and Jalgaon the most accommodation per individual.

Statement No. 3.

Taluk.	Number of persons per house.		Number of houses per square mile.
	In towns.	In villages.	
Ellichpur	4·3	4·7	68·5
Akot	4·1	4·3	61·8

Pusad	5·9	5·9	18·1
Kelapur	...	5·5	17·9
Melghat	...	5·7	5·0

Towns and villages.

Table I also gives the number of towns and villages in each district and taluk. Under the head of towns are included all municipalities and all places with 5,000 inhabitants; under the head of villages come all other inhabited places; unoccupied village sites are not shown. Ordinarily the villages correspond with the revenue areas known as such, but not entirely, as in some cases a town or village proper consists of two or more revenue villages. Altogether there are 39 towns and 5,785 villages in Berar. Of the towns, 14 lie in the Amraoti district, 10 in Akola, 5 in Ellichpur, 4 each in Buldana and Basim, and 2 in Wun. Table III (page 8) gives the number of towns and villages classified by population. Table IV (page 10) gives a list of the towns with their population compared with that of 1881. The last column of table III shows the population assembled at fairs and includes the inhabitants of some railway stations and premises. The people attending the fairs do not belong to the villages where they happened to be held, and to combine their numbers with those of the villages is to give the latter undue proportions and to vitiate the classification. In the same way railway stations frequently have no real connection with any village proper, and sometimes while situate on the lands of one revenue village will bear the name of another. Where the stations are within touch of a village no distinction has been made, but where they are absolutely apart and unconnected, the population has been shown separately and included in the miscellaneous element given in the last column of the table.

Statement No. 4.

District.	Number of square miles per town and village.	Number of square miles per town only.
Ellichpur (without Melghat)	2·06	194·86
Amraoti	2·62	197·08
Akola	2·69	265·93
Buldana	3·11	702·20
Wun	3·16	1,955·61
Basim	3·51	738·98

Areality.

Statement No. 4 shows what is termed the "areality" of the towns and villages, that is to say, the average area available for each. The first column of figures includes both towns and villages; the second column towns only. The villages are closest together in the Ellichpur district, the Melghat taluk being eliminated, and are farthest apart in

Statement No. 5.

Taluk.	Number of square miles per town and village.	Mean proximity in miles.
Daryapur	2·02	1·53
Ellichpur	2·11	1·56
Akot	2·24	1·61
Murtazapur	2·28	1·62
Jalgaon	2·39	1·66
Akola	2·51	1·70
Amraoti	2·54	1·71
Malkapur	2·65	1·75
Chandur	2·76	1·78
Morsi	2·92	1·84
Wun	2·98	1·85
Yeotmal	3·03	1·87
Mangrul	3·08	1·88
Mehkar	3·11	1·89
Darwha	3·17	1·91
Basim	3·23	1·93
Kamgaon	3·28	1·95
Balapur	3·36	1·97
Kelapur	3·44	1·99
Chikhli	3·60	2·04
Pusad	4·07	2·17
Melghat	4·98	2·40

Basim. The towns are nearest in the Ellichpur and Amraoti districts and widest apart in Wun, where each of the towns feeds an area of nearly 2,000 square miles. The areality of towns and villages together can, however, be better appreciated by a consideration of each taluk as shown in Statement No. 5, which also shows the mean average distance between each village. The mean proximity of villages in the Daryapur taluk is a very little more than a mile and half, and it increases slightly in each taluk in the order given in the statement down to Melghat, where it is rather more than two miles and three furlongs.

Urban and rural proportions.

Statement No. 6.

Showing the percentage of Urban and Rural population in each District and Taluk.

District.		Taluk.	Urban.	Rural.
Amraoti—		Amraoti	33·04	66·96
Urban	19·02	Chandur	6·39	93·61
Rural	80·98	Morsi	24·20	75·74
		Murtazapur	11·87	88·13
Akola—		Akola	19·22	80·78
Urban	18·73	Akot	16·35	83·65
Rural	81·27	Balapur	21·91	78·09
		Jalgaon	9·53	90·47
		Khamgaon	27·08	72·92
Ellichpur—		Ellichpur	33·42	66·58
Urban	18·83	Daryapur	7·55	92·45
Rural	81·17	Melghat	...	100·
Buldana—		Chikhli	4·92	95·08

Wun—		Yeotmal	5·2	94·8
Urban	2·45	Darwha	3·25	96·75
Rural	97·55	Kelapur	...	100·
		Wun	...	100·
Basim—		Basim	6·99	93·01
Urban	7·33	Mungrul	6·36	93·64
Rural	92·67	Pusad	8·35	91·65

Statement No. 6 shows the relative proportions of the urban and rural population. Of the districts, Amraoti, Ellichpur, and Akola come together with very similar proportions and with the highest urban population. Of the taluks Ellichpur, Amraoti, Khamgaon, Morsi, Balapur, Akola, and Akot have the highest proportions of urban population. In Melghat, Kelapur, and Wun there are no towns; and in Darwha, Mehkar, and Chikhli the proportion of urban population is less than 5 per cent.

Of large villages with population above 3,000 and less than 5,000, from which future towns may be evolved, there are altogether 53. Of these, 21 are in the Amraoti district, and as many as 7 in the Morsi taluk; in the Ellichpur and Buldana districts there are 9 each; in Akola 7, in Wun 4, and in Basim 3.

The largest number of small villages is in the Wun district, and in taluks in Melghat, where out of a total of 331 occupied villages 266 have less than 200 inhabitants each. The proportion of the population of each district residing in villages of this class and of the next lowest with less than 500 inhabitants is as follows:—

	Respectively.
Amraoti	5·12 and 17·59
Akola	6·18 „ 19·06
Ellichpur	13·40 „ 20·68
Buldana	5·71 „ 22·45
Wun	10·56 „ 32·94
Basim	7·41 „ 27·62

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

From this it is seen that in the Wun district 43·5 per cent of the population, or nearly one-half, reside in villages of less than 500 inhabitants; in the Amraoti district 22·71 per cent, or nearly one quarter; and in the other districts the proportions are intermediate between these two extremes.

The present census shows an increase of five towns on the number at the last: Balgaon Jagir, Pusla, and Nandgaon Peth, in the Amraoti district; Mehkar in the Buldana district; Yeotmal and Digras in the Wun district; and Mangrul Pir in the Basim district, have all risen to the dignity of towns since 1881. Three places shown as towns in 1881—Pathrot, in the Ellichpur district and Jamod and Sonala in the Akola district—have now less than 5,000 inhabitants, and are therefore omitted from the list of towns. Amraoti camp, although it has a population of only 4,709, of which a large proportion is purely rural and the rest suburban, is included in the list by virtue of its municipal character.

Amraoti.

The town of Amraoti, which was second on the list in 1881, now takes the first place, with a population of 28,946, being an increase of 5,396, or 22·91 per cent. This increase must, however, be regarded as only approximate, as the limits of the municipality have undergone considerable change, and it is not possible to ascertain the figures for the same actual area. In 1881 the figures for the town included those of the civil lines which now form part of the Camp municipality, the population of which is given separately; and, on the other hand, the Town municipal limits now include the hamlets of Rajapeth and Mahajanpura, which were shown as separate villages in 1881. The population of these hamlets in 1881 amounted, together, to 2,883, which is probably considerably in excess of the population of the civil lines, the actual figures for which are not available, as they are combined with those of the rest of the area comprising the Camp municipality; but it may be safely assumed that the population gained by the town of Amraoti by the extension of the municipal area is larger than that lost by the exclusion of the civil lines, and that, therefore, the actual increase of population in the town is not so great as it appears to be from Table IV. The increase, however, still remains considerable, and this is the more remarkable because in the period from 1867 to 1881 the population varied very inappreciably; it was surmised then that a great deal of trade had left the town, but it would seem now that this has largely returned and that the town has made a great advance in general development during the last decade. Twenty per cent of the population is now supported by commerce and the kindred occupations associated with the transport and storage of goods and material. Five hundred and thirteen persons or 18 in a thousand subsist upon banking and money-lending. (I may note here in passing that the figures given for occupations include both actual workers and those who are dependent upon them, as the numbers of the actual workers alone are not available.) Thirty five per cent are engaged in industrial pursuits described in the classification prescribed for occupations as the "preparation and supply of material substances." Nine per cent are employed in the supply of food and drink, and the same proportion in the preparation and supply of textile fabrics and dress. Cotton finds employment in some form or other for 1,173 persons; 2,127 persons, or 7 per cent, are engaged in the professions, learned or artistic, and this is a much larger proportion than is shown by any other town; 8 per cent are employed in personal and domestic service; and 2,809 persons, or 10 per cent, are engaged in agricultural pursuits. Of the latter, 116 persons are concerned in gardens, etc., and the majority of the remainder are probably the inhabitants of the hamlets which have been recently included within the municipal limits.

Ellichpur.

Ellichpur, which Sir Alfred Lyall stated in 1870 "had probably for five centuries been the most populous town in Berar," has now at last lost its pride of place. Its popula-

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

tion shows a slight decrease since 1881, and it is possible that the population proper is even smaller than that given, as at the time of the final census there happened to be a gathering in the city of some hundreds of persons from outside to attend the funeral obsequies of a recently deceased rich Marwari. In the period from 1867 to 1881 there was a decrease in the population of the city of nearly 4 per cent, and it is probable that the downward movement has been going on for a considerable time and will continue. This is easily explained. The old military importance of the town has entirely gone. In former times, when depredatory hordes invaded the Deccan from Upper India, their road lay across the passes of the Satpuras, and the importance of Ellichpur as a stronghold, whence troops could issue to repel the advance and where refugees from the country-side could obtain protection, was strategically great; now the position is of no value, and although the suburb of Paratwada still remains a military cantonment, the garrison is small and the need for living within reach of its protection is no longer felt. On the other hand, trade and manufacture follow the railway, and as the line which passes through Berar is more than 30 miles distant, it is only to be expected that the old business of the city should leave it for places that are more conveniently situated in this respect. A branch line, which may come in the course of time, would probably go far towards restoring the importance of Ellichpur. The policy of the construction of such a line is another question. Having regard to the dense population of the area that the line would supply, there can be no question as to a sufficiency of traffic, and the pecuniary success of the undertaking might be very confidently anticipated. From a military point of view, also, if Ellichpur is to be continued as a cantonment, a line seems desirable; the strategic point has shifted from the hill passes to the main line of rail, and it certainly appears incongruous to keep the only troops in the province in an eccentric situation without railway communication. If that were the only consideration the obvious remedy would be to move the garrison, but as a railway to Ellichpur seems sooner or later inevitable, it might be expedient on this ground to accelerate its construction.

A very large proportion of the population of the town is engaged in industrial pursuits, 12,852 persons, or 48 per cent, being returned in this category; 5,537 persons are concerned with the preparation and supply of cotton as weavers, spinners, dyers, and manufacturers of dhurries; 5,610 persons, or 21 per cent, are agriculturists. Only 7 per cent belong to the commercial class, and 4 per cent to the professional.

Akola.

Next to Ellichpur in size comes Akola, with a population of 21,470. This town has been uniformly progressing in population for many years; in the period from 1867 to 1881 the increase amounted to nearly 14 per cent, and in the last decade it has reached to more than 29 per cent. Its convenient centrical position upon the main line of railway accounts for this growth, and will no doubt encourage its continuance in the future. Only 1,956 persons, or 9 per cent, of the population are engaged in agricultural pursuits, and of these 97 persons are gardeners and fruit-growers, etc., 36 per cent belong to the industrial class, of whom 1,365 persons, or more than one-sixth, are concerned with cotton, chiefly as cotton factory hands. The commercial class number 3,241, or 15 per cent, and the professional class 897 or 4 per cent; 1,918 persons, or 9 per cent, are employed in personal and domestic service.

Badnera.

Other towns which have largely increased since 1881 are Badnera, Karanja, and Khamgaon, the populations of which have risen respectively by 53, 32, and nearly 26 per cent. The increase in Badnera is chiefly due to its position as a railway

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

depôt and shunting station, which brings together a number of railway servants and labourers, and also to the establishment of a large cotton mill which employs upwards of nine hundred hands. The industrial class altogether number 3,621 persons, or more than 36 per cent of the population; the commercial class number 1,236, or more than 12 per cent. One hundred and twenty-five persons are engaged in gardens, etc, and 3,215 persons, or 32 per cent, in agriculture proper.

Karanja.

The population of Karanja decreased in the period from 1867 to 1881, and its present recovery is to some extent due to its growing importance as a cotton depôt and the establishment of some cotton presses. Two steam presses and two ginning factories have been established during the decade. Karanja now takes the sixth place in the province in point of size, and in this respect has some claim to be included amongst the number of those which enjoy a municipal constitution. In the composition of its population also Karanja is distinctly more urban than some of the towns which rank as municipalities: 6,528 persons, or 45 per cent, belong to the industrial class, and of these 1,850 persons are concerned in the preparation of cotton as weavers, ginners, spinners, dyers, and factory hands. The commercial class number 2,398, or more than 16 per cent, a proportion which is only exceeded by Amraoti and Khamgaon. The agriculturists proper number 2,916, or 20 per cent.

Khamgaon.

Khamgaon is steadily developing as an important centre of the cotton trade, and has almost doubled its population since 1867: 2,104 persons, or 13 per cent of the population, are concerned in the preparation of cotton, and the whole industrial class number 6,826, or 44 per cent. To the commercial class belong 2,856 persons, or 18 per cent, and to the professional class 617 persons, or 4 per cent; of agriculturists proper, the proportion is only 11 per cent. In its non-agricultural composition Khamgaon ranks next to Akola and Amraoti, and in its commercial element to Amraoti only.

Shegaon.

Shegaon, which increased very rapidly in the former period, has not maintained its progress since 1881, the increase of population in the decade amounting only to 3 per cent. It has a large agricultural population, the proportion of this class being more than 47 per cent of the whole. The industrial class forms 23 per cent and the commercial class 14 per cent. In respect of the strength of the last element the town ranks fifth in the province.

Akot.

Akot, although the fourth town in the province in size, is very rural in the composition of its population, of whom 45 per cent are land occupants, cultivators, and field labourers; 30 per cent belong to the industrial class, and 7 per cent to the commercial. It, however, ranks next to Amraoti in its proportion of workers in metals.

Basim.

In Basim the proportion of the agricultural population is 22 per cent. The industrial class form 34 per cent, the proportion of those engaged upon buildings as artificers or suppliers of building material being higher than in any other town. To the commercial class belong 9 per cent, and to the professional 5 per cent, and in this last respect Basim comes next to Amraoti in the province, but at a considerable interval.

Anjangaon.

In Anjangaon the industrial population form 52 per cent of the whole, the highest proportion in the province; this is largely due to the number of cotton weavers, of whom there are more than in any town but Ellichpur. The proportion of cane and palm leaf workers is also comparatively high. Agriculturists form 29 per cent and the commercial class 6 per cent.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Balapur.

In Balapur the industrial element amounts to 45 per cent of the population, and a large proportion of these are concerned in the preparation of cotton as weavers and dhurrie makers. The agricultural class forms 22 per cent and the commercial nearly 8 per cent.

In the town of Patur in the Balapur taluk there has been an apparent large decrease, but this is due to the inclusion in the population of 1881 of the persons who attended the fair there at the time of the census; these numbered 1,226, so that the population proper of Patur in 1881 was 5,993 and the present return shows an actual increase of 163 persons.

Urban religions.

The proportion of the urban population which is Hindu is considerably less than that of the rural tracts, and the Animistic tribes are very barely represented in the towns. On the other hand, Mahomedans, Jains, Parsis, and Christians are met with in larger numbers in the towns than in the country. Of every 10,000 persons in the province 8,738 are Hindus and 717 are Mahomedans; but of the same number of the urban population, 7,657 are Hindus and 2,069 are Mahomedans. Of the Animistic tribes, out of a total of 137,108 for the province only 2,044 are found in the towns. The Parsis and Christians are almost entirely confined to the towns, the urban proportion of the total numbers under these denominations being 94·2 and 88·1 per cent respectively. Of the total 177 Sikhs (by religion) found in the province, 77 belong to the towns, and of these 49 were returned in Akola. 35·9 per cent of the total Mahomedans and 32·4 per cent of the Jains reside in the towns, while only 10·9 per cent. of the Hindus are included in the urban population.

Mahomedan towns.

In sixteen towns the Mahomedan element exceeds 20 per cent of the population. The old town of Balapur, "the chief military station of the Moghal rulers of Berar after Ellichpur," heads the list with the large proportion of 43·2 per cent, though in actual numbers Ellichpur, Akola, and Amraoti exceed it. Mangrul Pir in the Basim district has a Mahomedan population amounting to 35·1 per cent; Malkapur comes next with 33·3 per cent; Patur next with 31·7 per cent; Barsi Takli next with 30·6 per cent; Paratwada, the cantonment, next with 29·7 per cent; then Akola with 28·6 per cent; Kholapur with 28·4 per cent; Ellichpur with 27·4 per cent; and Karanja with 24·8 per cent.

Jain.

Karanja possesses the largest Jain element, the numbers being 719 and the proportion 4·9 per cent. In Amraoti there are 651 Jains and in Balapur 475.

Parsi.

Of the Parsis 183 out of the urban total of 388 are found in Badnera; there are 68 in Akola, 38 in Shegaon, and 33 in Amraoti.

Christian.

The largest Christian population, 315, is found in Amraoti camp; Akola has 188, Badnera 187, and Paratwada 108.

CHAPTER II.

MOVEMENT OF THE POPULATION.

TABLE II, page 5, shows the variation in the population since 1881. The actual increase in the province is, as has been stated, 224,818, or 8·41 per cent; the increase among males has been 111,334, or 8·06 per cent, and among females 113,484, or 8·78 per cent. The annual rate of increase has been 8·11 per mille. If the same rate of increase is maintained during the next decade, the population in 1901 will amount to 3,141,240; but the rate of increase during the period preceding the last census from 1867 was 8·50 per mille, and it, therefore, appears that the annual rate is diminishing. It seems probable that it will continue to diminish as the province gradually approaches its containing limit. The rate of increase at the present time implies a daily increment of about 64 persons, or upwards of 2,000 every month.

Variation since 1881.

The increase is of course the net result of the sum of births minus deaths plus immigration minus emigration. From the Sanitary Commissioner's Report for 1890, it appears that the excess of the registered births over deaths during the period from 1881 to 1890 was 142,692. If these figures are reliable, it follows that the excess of immigration over emigration during the same period has been 82,126. From the Annual Administration Reports, it appears that the immigration locally recorded from time to time has amounted to 18,370 and the emigration to 7,598, but these statistics are clearly of no value whatever. The census returns, however, do not enable us to arrive at more than a rough approximation of the figures, as positive data are not available. The table of birthplaces, Table XI, page 174, shows that 450,915 persons were born outside the province, but this number includes those who immigrated before 1881. The return for the last census showed that 435,933 persons were then recorded as born outside the province, so that the actual increase of immigrants has been 14,982; but the number of persons immigrating during the decade must have been largely in excess of this number, as a considerable number of those returned in 1881 must have died since. There is, of course, no information as to the actual number of deaths, but an approximation may be made by applying the probable death rate. The question is what is the probable death rate applicable to this class of people. That recorded for the province, the mean of which for the ten years is 35 per mille, is most probably much too high, as an immigrant body does not carry with it a very appreciable proportion of sick, weakly, or infirm people, and is necessarily a stronger and more healthy class than the average of the general population. In the Wun district, where it will be seen a large proportion of the immigrants were enumerated, the mean rate of mortality has been 29 per mille, and allowing a higher rate for the indigenous population, it seems that 25 per mille may be assumed to be fairly applicable to the immigrant body, though that possibly is too high. At this rate, however, the survivors of the immigrants of 1881 number 347,107, and this gives the number of immigrants between 1881 and the census of 1891 as 103,808. Turning now to the emigrants, the number of persons born in Berar and enumerated elsewhere at the census of 1881 is given in the Report for India as 63,191; but of these not one is shown in the State of Hyderabad, which is obviously an error of considerable magnitude. It is absolutely impossible that in an adjoining state with which there is constant communication there should not have been enumerated a single indi-

Nature of growth, vital statistics, and migration.

vidual of Berar birth, and the probability is that the number of emigrants to Hyderabad was very considerable; but as it is unknown we must represent the number of survivors by the symbol x in our calculation. For the rest, in the absence of any information, the same rate of mortality as was applied to the immigrants may be adopted, and at that rate the number of survivors is 50,315. With the exception of those found in Bengal, the number of whom I have not been able to ascertain, but which is probably comparatively small, the total number of persons born in Berar and enumerated elsewhere at the present census is 101,968. Deducting from this number the number of the survivors of the emigrants of 1881, we get $51,653-x$ as the number of persons who have emigrated between 1881 and 1891, and deducting this from the corresponding number of immigrants we get $52,155+x$ as the excess of immigration over emigration during the decade. If we now assume x to be about 30,000, and leave out of consideration the number of emigrants to Bengal, we arrive at the same result as that deduced above by the adoption of the vital statistics, and if the assumption of the value for x be at all approximate, it follows that the vital statistics are fairly accurate in general results also. As to what value should be given to x there is considerable doubt. The Census Superintendent, Hyderabad, has given me 30,674 as the number of persons born in Berar and enumerated in that state in 1891; but whether the number has increased or decreased, or remained fairly stationary since 1881, there is no means of ascertaining. Roughly, then, it may be estimated that the number of immigrants since 1881 has been about 100,000, and the number of emigrants about 20,000. A statement of the details of immigration and emigration will be found in Chapter IX, and I leave this topic for the present to consider the local variations.

Local variations.

From Table II it is seen that the largest actual increase of population has occurred in the taluk of Kelapur, where it amounts to 27,112. Chandur comes second with 26,495. Khamgaon shows the smallest increase, 3,606, and as the town of Khamgaon has increased by 3,208, the rest of the taluk shows a very inappreciable variation. The increase in the Melghat taluk, 4,376, is to a large extent accidental, as at the time of the census there happened to be a body of labourers numbering 2,133 at work on the construction of the Koha road, and it is believed that nearly all these were strangers to the taluk who were brought in by the contractors for the work and who would leave again at its conclusion. Some no doubt belonged to Akot and other taluks of the Akola district, but they were mostly up-country people. Of these labourers, 1,305 were males and 828 females. Six taluks show a decrease of population—Daryapur, Akola, Ellichpur, Balapur, Akot, and Jalgaon. In Daryapur the decrease is very slight, 557, but in Jalgaon it amounts to 8,123.

The result in the actual variation of each district is reproduced in the adjoining statement, which also shows the proportion per cent. Amraoti has the largest actual increase, but Wun runs it very close and has a much higher proportional increment. Buldana and Basim come next, but the proportion in Basim is higher than that in Buldana. The actual increase in Ellichpur is only 1,993, so that had it not been for the Koha road labourers this district would have shown a decrease as well as Akola. As it is, Akola stands alone as the only district in which there has been a fall-off in the population.

Statement No. 7.

District.	Variation.	
	Actual.	Per cent.
Wun	+79,511	+20·3
Amraoti	+80,317	+13·9
Basim	+39,298	+10·9
Buldana	+41,258	+9·4
Ellichpur	+ 1,993	+ ·6
Akola	−18,010	−3·0

Statement No. 8 shows the proportional variation in each taluk. This variation is also illustrated in map No. 2 and in diagram No. 2. From the map it will be seen that the increase above 15 per cent is almost exclusively confined to the eastern portion of the province, the exception being the Mehkar taluk. Kelapur, which has the largest actual increase, easily comes first with the highest proportion, which is indeed almost twice as large as that of Darwha, which comes second. The map also shows that the taluks which show a decrease are centrically situated and either confined to the interior of the province or bounded on their outer limits by mountainous country. It also to some extent shows a uniform progression in the scale of increase. A straight line from Daryapur to Wun shows a rise from below zero, or a decrease, to an increase of first more than 10 per cent, then to more than 15 per cent, and then to above 30 per cent, from which it drops again to the over 15 per cent. grade; a curved line from Akola through Khamgaon and Chikhli to Mehkar shows a similar progression from below zero to an increase of less than 5 per cent, then to above 5 and less than 10 per cent, and then to above 15 per cent. It may be further observed that the decrease is confined to the taluks of the plain; and by comparing this map with map No. 1, it will be seen that of the six taluks in which a decrease has occurred, two are of those in which the population is most dense, two are of those of the second group or fairly dense, and two are of the third group, the averagely dense.

Statement No. 8.

Variation per cent in each taluk.

Kelapur	+ 34·39
Darwha	+ 17·92
Morsi	+ 17·49
Mehkar	+ 16·61
Wun	+ 16·54
Chandur	+ 15·44

Akola	— 1·03
Ellichpur	— 1·23
Akot	— 4·53
Balapur	— 5·15
Jalgaon	— 7·68

The diagram compares the proportional variation in the two periods from 1867 to 1881 and from 1881 to 1891. From this it may be seen that only five taluks—Kelapur, Wun, Murtazapur, Melghat, and Morsi—have increased their rate of progression, and these five were those which showed the smallest rate of increase in the earlier period. Mehkar, Yeotmal, and Amraoti are the only taluks which have maintained a fairly uniform rate of progression; but Darwha, Pusad, Chandur, and Basim, which showed very high rates of increase in the earlier period, have still maintained an advance above the average of the province.

We may now come to a consideration of the changes which have taken place in each taluk in detail, and for this purpose must revert to Table III and review the variation in the village classification. In the Report upon the Census of 1881 it was shown that there were 5,551 inhabited villages, and there, therefore, now appears to be an increase of 234 inhabited villages, but the real increase is only 123. The explanation of the difference is that in 1881 certain villages which were regarded as lying so close together as to form one inhabited site were combined, and in several instances two or more villages were thus shown as one. Many of the towns in Berar are aggregations of different villages, but it is doubtful whether this principle of aggregation can be safely extended to smaller groupings. The towns are few and well known, and there is no difficulty in obtaining an authoritative decision as to what sites they comprise, but in the case of smaller aggregations of villages there is no record to show which of them should be regarded as separate villages and which as combined; each aggregation must be dealt with on its own merits, and the opinions of local officers may differ and cannot be accepted as authoritative. It is known that in some instances in 1881 villages were regarded as united which were in reality quite separate and distinct, and it has now therefore been deemed more prudent to treat them all as distinct.

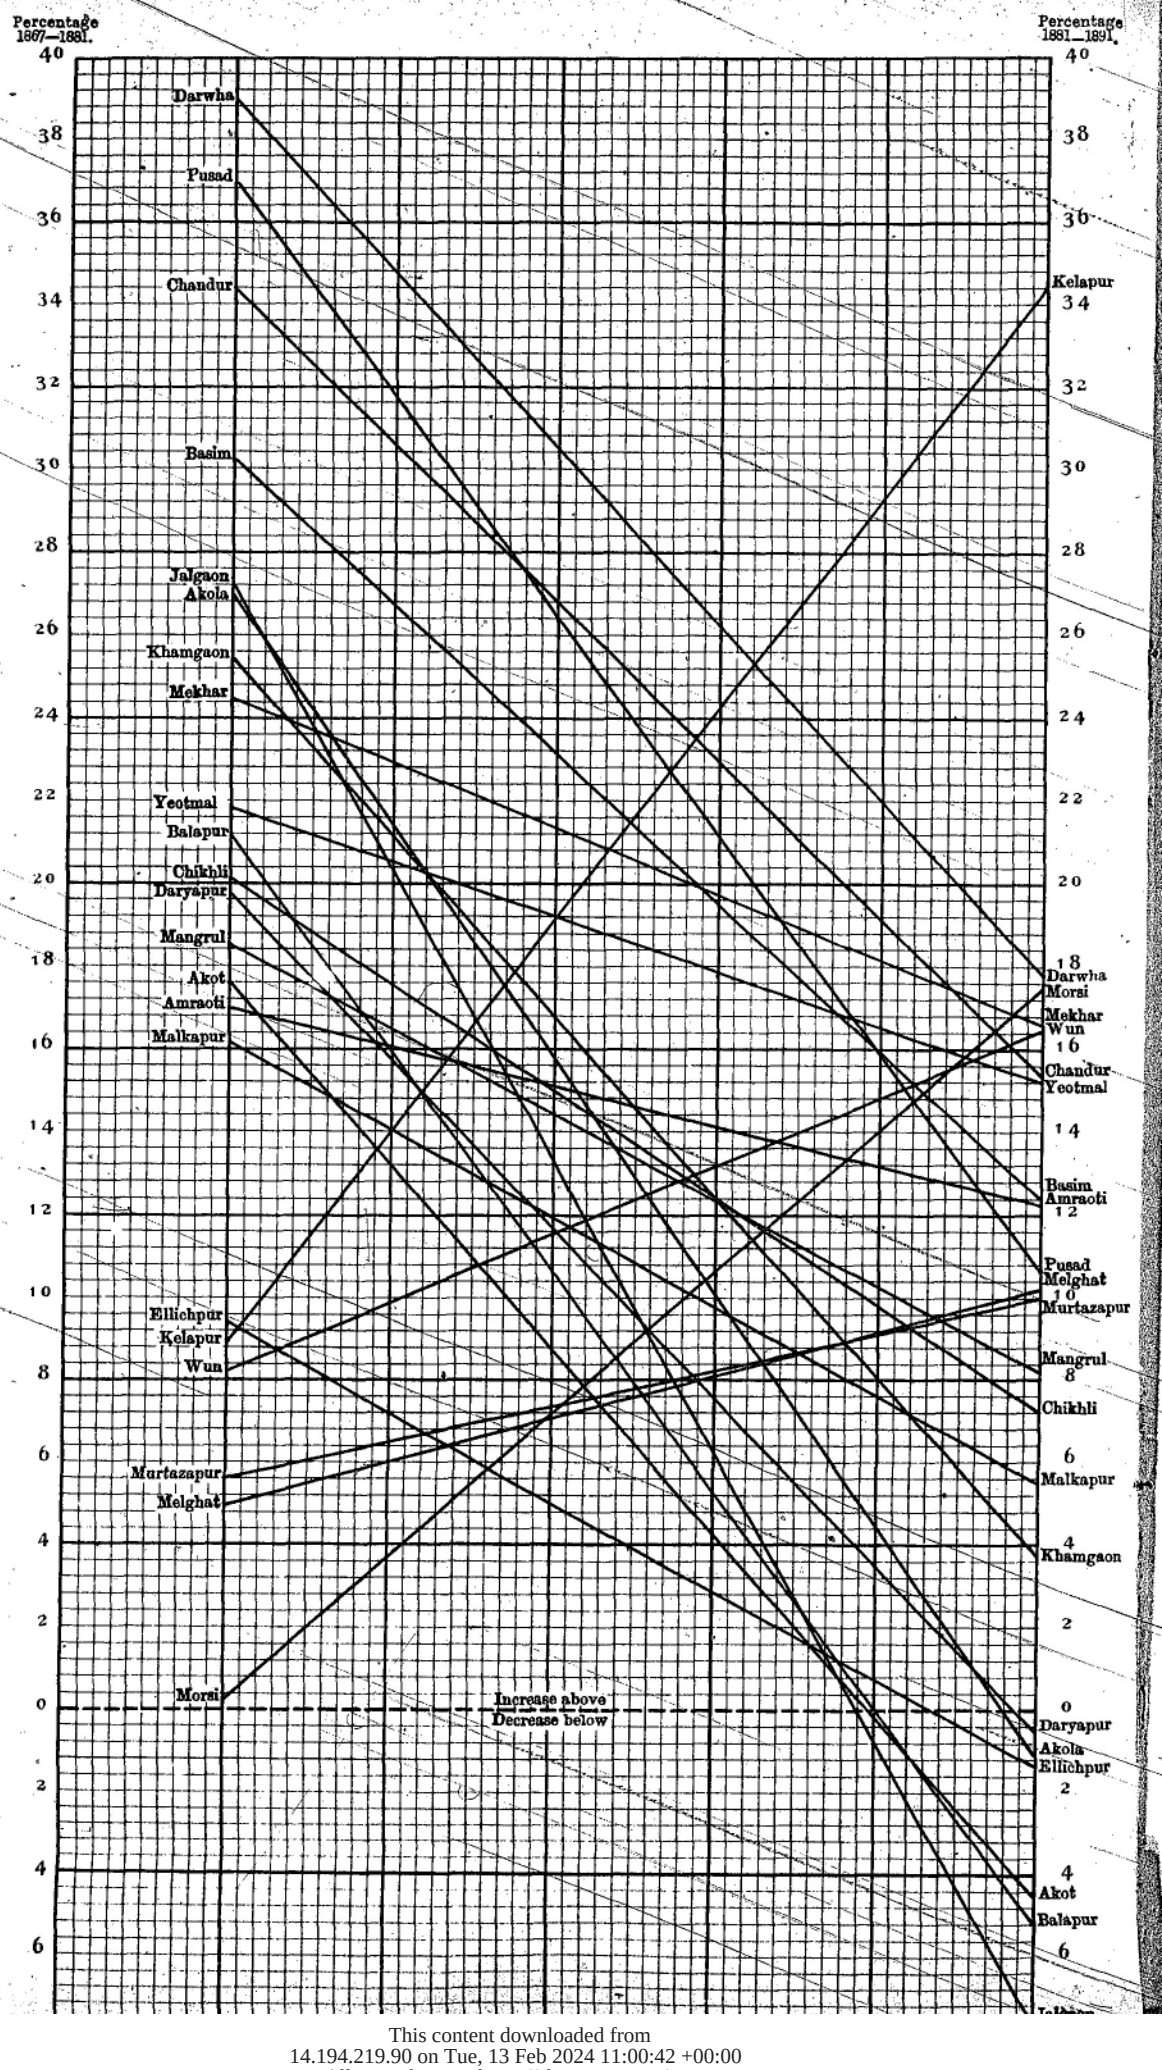

Villages.

Statement No. 9 shows the variation since 1881 in the number of inhabited villages in each taluk, the population of small villages, of large villages, and of towns in 1881 and 1891, and the variation in the population of the three groups. As in 1881, those villages which have a population of less than 1,000 persons are treated as small villages, and those with from 1,000 to less than 5,000 as large villages; and for purposes of comparison the figures for 1881 have been adjusted to the same conditions as those for 1891 by the separation of the combinations referred to. In each taluk there have been some changes in the occupation of village sites, old sites being deserted and new sites inhabited, and the figures given in this statement are the net results. The greatest number of changes and the largest net results are shown in the Wun district. In the Kelapur taluk 48 new sites have been occupied and 9 old ones deserted; in the Wun taluk the numbers are 36 and 14 respectively; in the Yeotmal taluk 30 and 12; in Darwha 13 and 5. Elsewhere, except in the Melghat taluk, where the numbers are 65 and 49, the changes are comparatively few.

Taluks.

In the Amraoti taluk the increase of population appears to be almost entirely urban, but this is due to the inclusion in the urban figures of the populations of Balgaon Jagir and Nandgaon Peth, which together account for 11,344 persons; allowing for the deduction of this number, it will be seen that the population of the class of large villages has considerably increased. In Chandur a very large proportion of the increase is in this class. In the Morsi taluk the urban increase is high owing to the rise of Pusla from the large village to the town class, and although its population has now been deducted from the large village class, the increase in the latter is yet proportionally very high, while the population of the small village class has largely decreased. This means that the small villages have grown into big ones. In the Murtazapur taluk the chief increase has been among the small villages. In Akola the urban population has been increased by the growth of the town of Akola itself, and while the small village class has also increased the large village class has largely diminished. This does not mean that there has been an increase in the number of villages or that the growth of the small villages has been general, but that, owing to the diminution of the population of the large villages, several of the latter have been reduced to the lower class. In Akot the decrease has been general throughout the three classes. In Balapur the decrease

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

has been in the urban and the large village class. In Jalgaon the decrease has been general, although the large village class shows an actual increase. The large urban decrease is due to the reduction of Jamod and Sonala from the town to the large village class, while the town of Jalgaon itself has also considerably decreased; Jamod now numbers 3,772 and Sonala 4,497; and as these are now added to the population of the large villages with the net result of an increase of only 1,471, it is seen that the large villages have also much diminished. In the Khamgaon taluk there has been no appreciable change, although the town of Khamgaon has increased. In the Ellichpur taluk the large urban decrease is almost entirely due to the reduction of Pathrot from the town class; it now numbers a population of 4,857, and allowing for their addition to the large village class the increase of the latter is reduced to 1,476; as this is less than the decrease in the small village class, it appears that the loss in the taluk population is chiefly among the latter. In Daryapur, also, the chief decrease appears to be in the small villages, though not to the extent that is actually shown in the statement, as the increase in the large village class shows that some of the decrease in the lower class is due to the growth of small villages into large ones. In the Melghat there were no large villages, but there is one now, which numbers 1,063 persons. In Chikhli, Malkapur, and Mehkar the increase has been general through the three classes and Mehkar itself now ranks as a town, which accounts for the apparently large urban increase in that taluk. In the same way the urban increase in the taluks of Yeotmal, Darwha, and Mangrul is explained by the promotion of Yeotmal, Digras, and Mangrul Pir. In all the taluks of the Wun district there has been a large increase in the small village class, which, taken in conjunction with the general increase in the population and in the number of inhabited villages, is what might be expected. In the Basim taluk the main increase is in the large village class, which shows the general growth of the small villages; and the same may be said of Mangrul when the deduction of the population of Mangrul Pir from the village class is allowed for. In Pusad there has been a large increase in both the village classes.

Districts.

Regarding the general movement by districts, it will be seen that in the Amraoti district the tendency has been towards the towns and large villages; in the Akola district, with the exception of the towns of Akola and Khamgaon, the main loss of population has been in the towns and large villages; in the Ellichpur district the tendency has been away from the small villages but not to the gain of the others; in the Buldana and Wun districts there has been no tendency in any particular direction, but a general growth throughout; and in the Basim district the large villages have exhibited the most gain.

Proportions of indigenous population.

It is necessary now to consider the movement of the population by the light thrown upon it by the table of birthplaces already referred to. From that table is obtained the information comprised in Statement No. 10, which shows for each taluk the proportion of its population born (1) within the district in which the taluk is situate, (2) elsewhere within the province, (3) in the Central Provinces, (4) in Hyderabad territory, (5) in the Bombay Presidency, (6) in the North-Western Provinces and Oudh, and (7) in Rajputana and Central India.

The number of persons born elsewhere than in these provinces and states is comparatively insignificant. Chandur has the smallest proportion of home-born people, and the largest proportion of foreigners to the province; and Yeotmal runs it very close in both respects. Balapur has the largest percentage of indigenous population, and next to it come Jalgaon and Akot. Besides these, Chikhli, Malkapur, Melghat, and Akola have all more than 80 per cent of indigenous inhabitants. The migration from other parts of the province is most conspicuous in Daryapur, and after that in Murtazapur, Mangrul, and Darwha.

Movement within the province seems confined to the inner portions, and Wun, Kelapur, Melghat, Pusad, Chikhli, and Morsi, all outlying taluks, have very small proportions of their inhabitants derived from other districts of Berar. In Daryapur in every 10,000 persons 1,855 have been born in parts of Berar beyond the Ellichpur district; in a similar number in the Wun taluk only 20 have come from other districts of the province.

Statement No. 11.

Showing the number of persons in each taluk born in other districts in Berar.

SUMMARY OF STATEMENT No. 11.

District.	Contributes to other Districts.		Receives from other Districts.		Balance.			
					Gain.		Loss.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Amraoti	22,434	30,407	21,805	30,318	...	...	629	89
Akola	24,360	33,561	17,010	24,117	...	...	7,350	9,444
Ellichpur	14,776	20,504	13,745	21,791	...	1,287	1,031	...
Buldana	12,081	16,537	13,059	17,980	978	1,443	...	...
Wun	8,334	10,992	14,826	16,004	6,492	5,012	...	...
Basim	12,452	15,406	13,992	17,197	1,540	1,791	...	...

each district found in the different taluks of other districts; read vertically it shows the total population that each district has contributed to the rest of the province. The summary of the statement shows for each district the total number received from and the total contributed to other districts, with the net gain or loss. Altogether 221,844 persons, or 7·6 per cent of the total population, have taken part in this inter-provincial movement. Of these numbers 94,437 are males, or 6·3 per cent of the total male population, and 127,407 are females, or 9·1 per cent of the total female population. For every thousand females who have thus shifted their homes there are only 741 males, or about four women to three men. Wun is the only district in which the proportion of males to females is considerably larger amongst those who have entered the district than amongst those who have left; in Basim it is slightly higher; and in all the other districts it is less. The movement shows the largest proportion to the population in Ellichpur, where 11·3 per cent of the total population of the district have come from other districts and 11·2 have gone, and in this district also is the largest proportion of females in both directions. In Wun for every thousand females who have entered the district there are 926 males; in Ellichpur there are only 631; amongst those who have left the highest sex proportion is in Basim, where it is 808 males to 1,000 females, and the lowest is in Ellichpur, 721. In Akola 10·1 per cent of the population of the district have left and 7·1 per cent have come in. Of those who have left their districts, the smallest proportion to the total population is in Wun where it is 4·1 per cent, and of those who have come into the districts the smallest proportion is in Buldana, where it is 6·4 per cent. Taking the sexes separately, the proportion of males who have left their own for other districts varies from 3·4 per cent on the total male population of the district in Wun to 9·1 per cent in Ellichpur; of those who have entered the district from other districts it varies from 5·3 in Buldana to 8·4 in Ellichpur; amongst females the proportion of those who have left their districts varies from 4·8 in Wun to 13·4 in Ellichpur, and of those who have come in from 6·9 in Wun to 14·2 in Ellichpur.

Coming to the taluks, the statement shows that Daryapur and Darwha have received very largely, and Wun a remarkably small number. Most of the movement disclosed is between adjacent districts and is to be largely accounted for, especially amongst the women, by marriages, but some must be attributed to genuine migration. Thus, the large numbers received by Daryapur come almost entirely from the Amraoti and Akola districts; Murtazapur, which is very centrically situated, has received largely from Akola, Ellichpur, Basim, and Wun. On the other hand, the Amraoti district has contributed to distant taluks in not inconsiderable numbers; Buldana has contributed to Amraoti, Murtazapur, Melghat, Darwha, and Mangrul; Wun has contributed to Akola. The summary shows that the Akola district has lost heavily in the exchange, and that the decrease in the population of that district is to a great extent due to migra-

III.—Map illustrating Immigration in Taluks.

Reg. No. 461, Sup.; Census, Berar — Nov 02 — 754.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00

tion to other parts of the province. The Report for 1881 (Table 99) shows that in the previous period there was a loss of 8,591 persons in the provincial interchange, so that the apparent unpopularity of the Akola district is not of recent date. It is not to be expected that the Melghat taluk should attract many people from outside, as its physical and climatic conditions are calculated to repel the ordinary lowlander, but it is somewhat astonishing that more persons should not have been drawn to the taluks of Wun and Kelapur from within the province. The facts elicited suggest the reflection whether it might not be desirable and feasible to take measures to induce some migration to these taluks from the more congested parts of other districts. The statistics of land and cultivation reproduced in the first chapter from the Revenue Report show that there is a large amount of culturable land available for occupation in the Wun district and scarcely any in Ellichpur. Some of the rising generation of agriculturists in the Ellichpur district must emigrate or follow some other occupation, which it need scarcely be said they will be very slow to do, and their attention might well be drawn to the facilities offered in Wun. The very superior advantages of free grazing in the Wun district, mentioned in page vii, should alone be a great inducement, but it is doubtful if such facts are known to the people in Ellichpur, or anywhere beyond the district itself.

The adjoining Statement No. 12 compares the population at 1881 and 1891 in each district of those born in other districts of the province. This shows that the interprovincial movement during the decade has been in favour of the Amraoti, Basim, and Buldana districts, and that Akola, Ellichpur, and Wun have proved less attractive provincially than the rest. It also appears to show that with an increase of population there is a tendency to a still greater increase of movement.

Statement No. 12.

District.	Number of persons returned as born in other districts of Berar.		
	1881.	1891.	Increase.
Amraoti . .	41,735	52,123	10,388
Akola . .	39,157	41,127	1,970
Ellichpur . .	34,457	35,536	1,079
Buldana . .	23,316	31,039	7,723
Wun . .	28,693	30,830	2,137
Basim . .	22,287	31,189	8,902

Immigration.

Reverting to Statement No. 10, it will be seen that the taluks Chandur, Yeotmal, Wun, Kelapur, Amraoti, Morsi, and Pusad, have the largest proportions of foreigners. The chief immigration is from the Central Provinces, where were born 216,488 of the inhabitants of Berar. In every 10,000 inhabitants of Chandur, 2,755 were born in the Central Provinces; of Yeotmal 2,640; of Morsi 1,809; of Wun 1,720; of Kelapur 1,561; of Melghat 1,413; of Amraoti 1,297; of Ellichpur 696; and of Darwha 681. Of the population of the province, 110,905 persons were born in the territory of the Nizam of Hyderabad; the largest proportion is found in the Pusad taluk, where they number 1,690 in every 10,000; in Chikhli the proportion is 1,044; in Mehkar 970; in Basim 918; in Wun 706; and in Kelapur 531. Of persons born in the Bombay Presidency, there are 59,805 in Berar, where they are widely distributed; they are most conspicuous in Malkapur, where they number 808 in every 10,000, and in Khamgaon, where the proportion is 541. From the North-West Provinces and Oudh have come 28 359 persons, and from Rajputana and Central India 32,076; these people penetrate to nearly all parts, but are found in the largest numbers in the taluks of Amraoti (9,254), Ellichpur (5,000), Chandur (4,706), Akola (4,141), Akot (4,062), and Khamgaon (4,051).

The immigration from the Central Provinces, the Hyderabad dominions, and the Bombay Presidency is illustrated in map No. 3, on which are coloured all taluks in which the immigrants exceed 5 per cent. of the population. This shows that the main body of immigrants settle for the time in the border taluks

This content downloaded from

in which they first arrive, though the people from the Central Provinces have penetrated farther into the interior than the rest. Kelapur and Wun being contiguous to both the Central Provinces and Hyderabad, have attracted immigrants from both. The railway has helped to carry some of the immigration beyond the border taluks, as it reaches Amraoti on the one side and Khamgaon on the other, but there is no special locality which attracts all foreigners alike irrespective of distance.

In the marginal Statement No. 13 are compared the numbers returned at the present and the last census of those born in the three adjacent provinces from which the chief immigration is derived. The number of immigrants from the Central Provinces have increased by 31,346, or 16·9 per cent of their former total. Those from the Nizam's dominions and the Bombay Presidency, on the other hand, have diminished by 19,600, or 15 per cent, and by 17,588, or 22·7 per cent, respectively. The numbers from Central India and Rajputana together have risen from 17,675 to 32,076 or 81·5 per cent, and of those from the North-West Provinces and Oudh from 22,936 to 28,359 or 23·6 per cent.

Statement No. 13.

Persons born in	1881.	1891.	Variation.
Central Provinces	185,142	216,488	+31,346
Hyderabad territory	130,505	110,905	—19,600
Bombay Presidency	77,393	59,805	—17,588

In the next Statement, No. 14, are compared the numbers of the immigrants from outside the province in each district in 1881 and 1891. The features in this statement which at once attract attention are the large influx into the Amraoti district, especially that from the Central Provinces, and the diminution in the Akola district of immigrants from Hyderabad territory and Bombay. Of this class of people alone Akola has lost 18,492 since the last census.

Statement No. 14.

	Total extra-provincial immigrants.		From Central Provinces.		From Hyderabad.		From Bombay.		From Central India and Rajputana.		From N.-W. Provinces and Oudh.	
	1881.	1891.	1881.	1891.	1881.	1891.	1881.	1891.	1881.	1891.	1881.	1891.
Amraoti	114,938	147,017	86,368	111,377	7,714	5,713	9,403	9,556	3,510	9,234	7,459	10,146
Akola	62,821	48,000	6,692	7,245	17,149	8,595	25,953	16,015	6,215	9,063	5,000	6,410
Ellichpur	38,014	35,059	22,305	20,201	4,731	3,713	3,333	1,731	2,524	3,575	4,649	5,397
Buldana	63,246	60,723	1,520	1,311	32,775	32,081	25,005	21,568	2,436	3,834	1,243	1,467
Wun	95,541	103,399	66,736	74,662	20,314	18,024	4,449	4,343	1,284	2,720	2,730	3,310
Basim	61,373	56,444	1,521	1,622	47,822	42,744	9,250	6,532	1,706	3,576	955	1,562
TOTAL	435,933	450,642	185,142	216,418	130,505	110,870	77,393	59,745	17,675	32,052	22,936	28,292

In this statement the numbers of the railway passengers, etc, at the present census are omitted.

The birthplace table will be subsequently dealt with more fully in it's own appropriate chapter to which the reader who desires further detail is requested to refer, but one more point in connection with the movement of the population may be illustrated here. In Statement No. 15 are compared the numbers of those returned in each district as born there at the last and the present census, and the variation per cent of the numbers thus shown to be indigenous is compared with the variation per cent of the total population.

Decrease in Akola.

The variation of the indigenous population may be regarded as that due to natural causes, though it may be reduced by emigration, as to which we have no detailed inform-

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00

ation. Akola, which shows a decrease of 3 per cent. on its total population, has a decrease of only 1 per cent in its indigenous population, that is to say, the chief decrease has been amongst the foreign element. The vital statistics for this district show an excess of registered births over deaths of 11,385, and whether these figures are trustworthy or not, there is no reason to suppose that the deaths have exceeded the births, so that the inference from the decrease in the indigenous population is that there has been some considerable emigration of those born in the district. From Statement No. 14 we see that in the extra-provincial immigration, there has been a fall-off of 14,821; from Statement No. 15 a decrease of 5,159 in the indigenous population; and from Statement No. 12 an increase of 1,970 of immigrants from other districts of Berar; the net result accounts for the total decrease in the district, 18,010. It will be shown in Chapter XI that this decrease is chiefly among the agriculturists, and this conclusion receives some confirmation in the caste table, which shows a diminution among Kunbis, Munarwars, and Marathes (who were all described as Kunbis in 1881), amounting to 18,334, but for reasons which will be explained in the chapter upon castes, this difference is not to be entirely relied upon. It has been suggested that the decrease is due to the departure since 1881 of immigrants who came into the district during the famine of 1877, but there is nothing in the returns of 1881 to show that there was any special influx into the Akola district on this account; on the contrary, the percentage of immigrants during the period from 1867 to 1881 was smaller in the Akola district than in any other. On the other hand, the figures quoted in statement No. 14 go some way to confirm this theory. The famine immigrants would have come from the Hyderabad dominions and the Bombay Presidency, and it is precisely in this direction that the chief decrease in the district lies. Other districts show a diminution in the numbers of these classes, but none to so great an extent as Akola, and it is possible that most of the famine immigrants entering the province by rail from the west may have temporarily settled in the Akola district, although, if it had been so, it seems probable that the fact would have been brought to light in the census of 1881. This explanation, however, does not account for the decrease in the indigenous population, and having regard to all the circumstances it seems clear that there must be some deterrent influence in the agricultural conditions of the district. In Amraoti the percentage of increase of the indigenous population, although normal, is less than that of the total, and the rate of increase has been more rapid in the foreign element; the total increment is made up of an increase of 37,850 in the indigenous population, of 32,079 in the extra-provincial immigrants, and of 10,388 in the inter-provincial immigrants. In Ellichpur the low rate of increase in the indigenous population indicates emigration, and there has been an actual decrease of 1,876 persons amongst the immigrants. The comparatively high density of population in the taluks of Ellichpur and Daryapur is sufficient to explain this movement. In Buldana and Basim the increase in the indigenous population has been normal, and the decrease in the extra-provincial immigration has been more than counterbalanced by the increase in immigrants from within the province. In Wun, as in Amraoti, there has been an increase under all three heads, and the high rate of increase amongst the indigenous population points to an excellent state of the public health and an abundance of the means of livelihood.

Increase in other districts.

Statement No. 15.

	Indigenous population.		Variation.		Variation per cent. of total population.
	1881.	1891.	Actual.	Per cent.

In the consideration of the increase or decrease of the population, and of the causes which have led to these results, the history of the province during the decade, so far as it regards the health and welfare of the people, may be of some interest and utility; and some brief notes compiled from the Administration Reports for each year are accordingly appended.

Sketch of the history of the province since 1881.

The year 1881-82 was agriculturally prosperous; there was a seasonable monsoon, good harvests everywhere, and food-grains were cheap; but there was a higher rate of mortality than in the previous year, though that may have been more apparent than real owing to some improvement in the registration. The trade of the province expanded; the value of imports increased by 29 lakhs of rupees over that of the previous year; the value of exports increased by 131 lakhs. The revenue increased by nearly three lakhs, and the provincial expenditure by rather more.

The year 1882-83 was not so favourable to the agriculturist; the rainfall was somewhat deficient, and its distribution was unequal and unseasonable; the price of the staple food-grain, *jowari*, rose from 38½ seers for the rupee to 28½. The value of imports again increased by more than 61 lakhs, while that of exports remained much the same as in the previous year.

In 1883-84 the rainfall was excessive and abnormally distributed, and the year was said to be one of much sickness, of poor crops, except in the spring, and of depressed trade. The short harvest of the staple food grains tended to raise their price, and the price of food generally remained at more than the average figure throughout the year. There was a severe epidemic of small-pox and of cholera, and the death rate rose to the high proportion of 51·3 per mille of population; at the same time there was a diminution in the birth rate.

In 1884-85 the rainfall was again excessive and unseasonable, but the prices of food-grain fell, and the year was remarkably healthy. There was an increase in the quantity of imports and exports, but a decrease in the value, which is, however, said to be due to a change in the method of account. Revenue and expenditure also increased.

In 1885-86 the rainfall was unseasonable and the year, on the whole, unfavourable to the agriculturist. The prices of most food-grains advanced, but that of the staple, *jowari*, fell somewhat. The mortality was higher than in the previous year, but, on the other hand, the birth-rate also rose considerably. There was an increase in both the imports and exports, and a rise of 28 per cent in the total value of trade. The provincial revenue and expenditure also again increased.

The year 1886-87 was generally an unhealthy one; the rate of mortality increased, and the birth-rate was abnormally low. The rainfall was sufficient but somewhat unseasonable; some of the crops were very poor, and the prices of food-grains advanced. There was, however, a steady growth of the provincial trade, and both imports and exports showed an increase of more than 20 per cent. The public revenue and expenditure continued to rise.

The next year, 1887-88, was particularly unhealthy, and a high rate of mortality was induced by an epidemic of cholera and an unusually heavy rainfall. Owing to a poor harvest the price of jowari rose from 29 to 20 seers for the rupee. The total value of the provincial trade remained much the same, but the value of the exports diminished. The revenue and expenditure, however, maintained a steady advance.

In 1888-89 the rainfall was considerably below the average, but its distribution was on the whole favourable to agricultural operations. The price of *jowari*, however, continued to rise slightly. The year was also a healthy one and free from epidemic disease. The total value of the trade increased considerably, but the conditions of the previous year were reversed, the imports

All use subject to https://about.jstor.org/terms

having diminished, while the exports were largely increased. Revenue and expenditure again advanced.

The year 1889-90 was a very unhealthy one compared with its predecessor, and a high rate of mortality was returned. The monsoon rainfall was sufficient and seasonable, but the ordinary winter rain failed completely; the autumn crops were consequently abundant and the spring crops suffered. The prices of grain generally advanced, but that of *jowari* fell. Both the import and export trade increased, and the revenue and expenditure continued to advance.

In 1890-91 the rainfall was seasonable and sufficient and favourable to both harvests. The price of *jowari* again fell, but those of other grains continued to rise slightly. The year was also healthy and comparatively free from epidemic disease. The total value of the trade increased to a small extent, but that of exports somewhat diminished. The provincial revenue and expenditure for the first time for many years shows a decrease upon the returns of the previous year.

Progress of the revenue.

During the decade the revenue rose from £901,265 to £1,022,863 in 1889-90; in the last year it amounted to £1,009,595. The expenditure in the same period has risen from £761,970 to £876,390, and in the last year to £859,272. The surplus has varied from £119,319 in 1882-83 to £194,250 in 1885-86, and has aggregated in the decade the sum of £1,571,561, while the amount paid to His Highness the Nizam of Hyderabad during the same period under Treaty has been £1,579,943. That the province has been able to make so large a payment without any return is a good indication of its capacities. Taking the amount of the revenue in 1890-91, which was not so favourable as that of the preceding year, the increase during the decade has been 12 per cent, so that the revenue has increased faster than the population.

Increase of trade and manufactures.

Taking the combined value of the imports and exports as the index to trade, there has been an increase of nearly 12 per cent in this direction also. The value in 1881-82 was ₹5,55,72,521 and in 1890-91 ₹6,21,73,929. The manufactures of the province also show considerable progress, although they are mostly confined to the manipulation of cotton. In 1881-82 there were 16 steam cotton presses; in 1890-91 the number had risen to 27. There have also been established during the decade a spinning and weaving mill at Badnera, an oil-mill at Amraoti, and 41 ginning factories in different parts. Of the cotton presses 12 are in the Amraoti district and 15 in the Akola district.

Extension of road and public works.

The communications between different parts of the province have been largely extended. Of metalled roads, that between Ellichpur and Pili, which opens out the Melghat forest reserves, the connecting link between this road and Chikalda, the road from Yeotmal to Wun, which supplies the south-west corner of the province with direct communication with the railway, the road through Morsi to the north-east frontier, which affords communication with the Central Provinces, that which links Basim to Karanja, that from Murtazapur to Daryapur, and that from Nandura to Jalgaon, both of which are feeders to the railway, are among the most important of those which have been completed. The lattice girder bridge across the Purna at Assegaon has been built, and with that at Bhugaon recently finished completes the communication between Ellichpur and Amraoti. Other important public works have been the construction of tanks and the supply of water to the towns of Amraoti and Khamgaon and to Amraoti camp. How far these undertakings have affected the sanitary condition of the towns and influenced their popularity are questions of considerable interest.

CHAPTER III.

RELIGIONS.

IN the Census Report for 1881 Mr. Kitts has given an exhaustive account of the religions of the province, the characteristics of the different sects, and the social habits and customs which are closely interwoven with the religious life of the people. No attempt is therefore made to deal with these subjects again, and this chapter will be confined to a notice of the statistical facts which the tables present.

Table No. VI, page 18, gives the numbers by sexes of each religion returned in each district and taluk. Sects have been tabulated for no religion except the Christian, and these are given in Table A, Part I, page 374.

In the following statement are summarised the total of each religion with the percentage on the total population. A very large majority of the population is Hindu, though it is probable that the numbers returned are not precisely accurate. The difficulty of defining the limits of Hinduism was fully dwelt upon at the last census, and has been frequently remarked. On the present occasion, however, an attempt has been made to distinguish between the orthodox Hindus and the aboriginal or forest tribes whose religion, whatever it may be, is not really Hindu, and who have been classified as "Animistic," the theory of spirits being the main idea which runs through a variety of heterogeneous beliefs. At the last census the people of these tribes, who were not shown as Hindus or Mahomedans, were described as "aborigines," and it was believed that their numbers were very much understated. Thirty-seven thousand three hundred and eighty-eight (37,388) persons were shown as "aboriginal" by religion, but in a tribal statement showing aboriginals without distinction of religion 164,941 persons were entered; and commenting on these figures the Census Commissioner for India remarked that he questioned whether the provincial authorities acted rightly in showing so large a proportion of these aboriginals as Hindus. The numbers returned on the present occasion would seem to show the justice of this criticism. The instructions to the enumerators were to enter the religion which each person returned, and that in the case of forest tribes, those who did not profess to be Hindus or Mahomedans (or of any other specific religion), were to be entered under their tribal name only. Thus a Gond who asserted himself to be a Hindu was entered as Hindu, but if he was doubtful of what the name of his religion was or did not claim to be other than Gond he was shown as such. The idiosyncrasies of the enumerator were thus eliminated from the question, and the result has been that 137,108 persons have been returned as Animistic by religion against 37,388 shown as aboriginal in 1881. This is sufficient to account for the decrease in the proportion of the Hindus to the total population which was shown in 1881 to be 90·8 per cent., and which is now 87·38 per cent.

Statement No. 16.

Religion.	Total.	Percentage on total population.
Hindu . . .	2,531,791	87·38
Musalman . . .	207,681	7·17
Animistic . . .	137,108	4·73
Jain . . .	18,952	·65
Christian . . .	1,359	·046
Parsi . . .	412	·014
Sikh . . .	177	·006
Others . . .	11	·0003

Distinction between Hinduism and Animism.

The adjoining statement, No. 17, shows the proportion of Hindus to the total population in each taluk. With the exception of the Melghat, Kelapur, Yeotmal, Wun, and Ellichpur taluks the proportion in the remainder is above the average for the province, and varies from 87·61 in Darwha to 93·89 in Mehkar. In the Ellichpur taluk the proportion is reduced by the strength of the Mahomedan element in the city and cantonment. Eliminating the figures for these localities the proportion of Hindus in the taluk is 89·50. The Hindu element is strongest in the Basim and Buldana Districts, and is almost everywhere greater in the rural tracts than in the towns. Deducting the figures of the urban population and excepting the Wun district and the Melghat taluk of the Ellichpur district, the proportion of Hindus in the rest of the province is 93·33, and is very evenly distributed, varying from 91·14 in the Amraoti district to 94·85 in the Basim district.

Distribution of Hindus.

Statement No. 17.

Taluk.	Percentage of Hindus.
Amraoti	87·91
Chandur	91·09
Morsi	87·75
Murtazapur	89·33
Akola	89·93
Akot	89·32
Balapur	87·93
Jalgaon	92·13
Khamgaon	91·80
Ellichpur	84·85
Daryapur	91·06
Melghat	17·73
Chikhli	91·16
Malkapur	91·11
Mehkar	93·89
Yeotmal	75·29
Darwha	87·61
Kelapur	70·60
Wun	77·28
Basim	93·65
Mangrul	93·83
Pusad	92·57

The proportional variation since 1881 among Hindus in each taluk follow more or less closely upon that of the total population, allowing for the exclusion of the Animistic. Where there has been an increase of the total population the percentage of increase among Hindus is rather less than that of the total; and where there has been a decrease the percentage of decrease is rather more. In taluks affected by the Animistic the differences are greater. As owing to the different treatment of the Animistic the variation among Hindus cannot be accurately given for each taluk, a statement of variation is omitted, but it is not probable that there would be any thing special to remark in it.

The proportion of Mahomedans to the total population in each taluk is shown in Statement No. 18. It is highest in Ellichpur, Balapur, and Amraoti, and lowest in Wun, Kelapur, and Melghat. Seventy-four thousand six hundred and thirty-four (74,634) Mahomedans, or 35·9 per cent. of their total number, are found in the towns. Deducting the urban populations and excepting the Melghat, Kelapur, and Wun taluks, the Musalman element is very evenly distributed in the rural tracts, the proportion varifying from 4·37 per cent. in the Basim district to 7·29 in the Ellichpur district. In the Yeotmal and Darwha taluks combined it is nearly 5 per cent.; in the Amraoti district 5·14; in Akola 5·58; and in Buldana 6·20. The principal towns in which Mahomedans are found have been mentioned in Chapter I.

Distribution of Mahomedans.

Statement No. 18.

Taluk.	Percentage of Musalmans to total population.
Amraoti	10·02
Chandur	4·57
Morsi	6·05
Murtazapur	8·92
Akola	9·03
Akot	9·68
Balapur	11·15
Jalgaon	7·10
Khamgaon	7·25
Ellichpur	13·01
Daryapur	8·37
Melghat	2·90
Chikhli	7·90
Malkapur	8·09
Mehkar	5·33
Yeotmal	4·50
Darwha	6·26
Kelapur	2·88
Wun	2·70
Basim	5·25
Mangrul	5·72
Pusad	6·49

The Musalman population has increased by 20,126 or 10·73 per cent. since 1881. The increase in the pre-

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

ceding period was 21 per cent but although the present proportion of increment is not so large it is higher than the average rate for the province. The percentage of variation in each taluk is shown in Statement No. 19. It varies very considerably from + 27·1 in Kelapur to — 10·5 in Melghat, but in many instances bears a close relation to the proportional variation of the total population. Kelapur, Darwha, Morsi, and Mehkar, the first four taluks in extent of variation per cent. on the total population are those in which the variation per cent. of the Musalman population is highest; and three out of four in which there has been a decrease amongst Mahomedans are of those in which there has been a decrease in the total population. Jalgaon, which shows a decrease of 7·7 per cent in its total population shows a decrease of 7·8 per cent. in its Mahomedan population; Ellichpur shows decreases of 1·2 and 1·5 per cent respectively. Considering how small a proportion of the total population the Mahomedans form such coincidences are curious. Yet they are not universal; Akola, Akot, and Daryapur, which have decreased generally, have an increase amongst Mahomedans; and in the Melghat the reverse is the case. It is also somewhat remarkable that the variation is to a large extent in inverse proportion to the numbers of the community. Like to like is the ordinary rule, and it might have been thought that the larger Mahomedan communities would have attracted the higher proportional increments, but it has not been so. The Ellichpur taluk had a considerably larger number of Mahomedans than any other in 1881, and the numbers have diminished; Amraoti, Malkapur, Akot, and Balapur, which came next in order of numbers in 1881, are amongst the lowest in order of the proportional variation since; on the other hand those with an increment exceeding 20 per cent had either a comparatively moderate or a small Mahomedan population in 1881. The Melghat taluk is exceptional; the numbers there were very small, and they have still further diminished. The same feature is observable in the towns. In places like Akola, Karanja, and Khamgaon where the total population has largely increased, there is also naturally a large increase in the Mahomedan element, but in what may be called the Mahomedan towns the increase of the Musalman element has been comparatively small and in some, such as Balapur, Kholapur, and Ellichpur, the number of Mahomedans has actually decreased. From these facts it is perhaps permissible to draw the inference that during the last decade at least there has been little or no proselytism to the Mahomedan religion, and that the increase in its numbers is due entirely to natural growth and immigration.

Their variation.

Statement No. 19.

Taluk.	Percentage of variation amongst Mahomedans since 1881.		
	Both Sexes.	Males.	Females.
Amraoti	+9·3	+10·2	+8·2
Chandur	+21·1	+23·5	+18·5
Morsi	+23·3	+23·8	+22·9
Murtazapur	+16·3	+17·6	+14·9
Akola	+11·9	+14·4	+9·2
Akot	+3·4	+2·5	+4·2
Balapur	—·2	—2·1	+1·8
Jalgaon	—7·8	—4·1	—11·8
Kha maon	+12·8	+15·4	+9·9
Ellichpur	—1·5	—3·5	+·6
Daryapur	+8·3	+9·7	+6·8
Melghat	—1·05	—15·4	—3 2
Chikhli	+15·1	+15·2	+15·0
Malkapur	+8·1	+7·5	+8.7
Mehkar	+26·6	+28·9	+24·2
Yeotmal	+17·8	+16·9	+18·9
Darwha	+25·5	+26·2	+24·8
Kelapur	+27·1	+26·9	+27·2
Wun	+9·9	+10·5	+9·4
Basim	+18·0	+18·9	+17·1
Mangrul	+13·5	+15·4	+11·5
Pusad	+17·2	+15·3	+19·4

Regarding the variation by sexes it is to be noted that where there is an increase it is generally larger among males; but in Akot, Malkapur, Yeotmal, Kelapur, and Pusad, the female increment is proportionally greater, while, in Balapur and Ellichpur, a diminution amongst the males is accompanied with an increase amongst females. In Jalgaon the decrease amongst females is very high.

Jains.

The Jains number 18,952, and are found in all taluks, but there are only 2 in the Melghat and 48 in Wun. Their highest actual number is in Basim, where there are 1,864 which form 1·05 per cent of the total population; Murtazapur comes next with 1,791, but with the largest proportion, 1·47 per cent. In each taluk of the Amraoti and Buldana districts they exceed 1,000 in number, and in order of strength in proportion to the taluk populations after Murtazapur and Basim, come Balapur with ·90, Chikhli with ·89, Chandur with ·81, Malkapur with ·78, Khamgaon and Mehkar with ·76, Akola with ·70, Morsi with ·69, Amraoti with ·67, and Pusad with ·63. Like the Mahomedans the Jains largely affect the towns where are found 6,138 of their number or 32·4 per cent.

In 1881, the Jains numbered 20,020, and the present census, therefore, shows a decrease of 1,068 or 5·3 per cent. This is remarkable, as in the preceding period from 1867 they had more than doubled their number. Mr. Kitts attributed the increment mainly to immigration, and considering the class of people regarded it as a high tribute to the prosperity of the province. The present diminution must then, it is feared, be regarded as an adverse reflection on the state of the country. Those who flocked in to a land of promise have apparently been disappointed, and if they have not all left it again they have, it would seem, warned others from following their example and turned the current to the ebb.

Actual Jain variation.

The variations of Jains in the different taluks as shown in the adjoining Statement No. 20 is curiously irregular. In 12 taluks there is a decrease and in 10 an increase. In Mangrul the diminution is more than one-half; in Balapur it amounts to 28·4 per cent, in Amraoti to 27·1 per cent and in Darwha to 18·9 per cent. Malkapur is the only taluk in which there is any substantial increase, and there it amounts to 24·6 per cent. Between the sexes the decrease is larger among males, the proportion being 6·6 per cent against 3.9 per cent. among females. The movements of the Jain population in the towns present very similar features to those in the taluks, although in the towns there is a net increase of 480 or 8·4 per cent., and the irregularity of the variation throughout appears to indicate a general restlessness in this community.

Statement No. 20.

Taluk.	Both sexes.	Males.	Females.
Amraoti	−455	−248	−207
Chandur	− 4	+ 4	− 8
Morsi	+130	+ 27	+103
Murtazapur	−138	− 85	− 53
Akola	+ 67	+ 24	+ 43
Akot	− 80	− 24	− 56
Balapur	−363	−235	−128
Jalgaon	+ 51	+ 39	+ 12
Khamgaon	− 46	− 16	− 30
Ellichpur	+ 15	+ 1	+ 14

Mangrul	−353	−177	−176
Pusad	+ 30	+ 15	+ 15

Christians.

The Christians number 1,359, of whom 1,197 are found in the towns. There are 34 fewer male Christians than there were in 1881 and 58 more females, while in the towns the males have increased by 52 and the females by 140; but the inclusion in the towns of Yeotmal, the head-quarters of a district with a consequent Eurasian population, accounts for much of the urban increase. In Amraoti taking the town and civil lines together as they were in 1881, the numbers have increased from 266 to 397, and in Badnera from 83 to 187; in Paratwada, the military cantonment of Ellichpur, there has been a decrease from 192 to 108, probably due to a change of troops; in Khamgaon a decrease from 87 to 52; and in Akola and Basim as light diminution

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

also. In Amraoti the increase is believed to be chiefly due to official changes involving the transfer of some Europeans and several Eurasians; and in Badnera it is probably due to an increase of the same classes in the service of the railway.

Christian sects and races.

In Table A, Parts I and II, pages 374—376, Christians are shown according to sect and race. The foreigners, or Europeans and Americans, etc, number 330 or 24·3 per cent., the Eurasians number 318 or 23·4 per cent, and the Native Christians number 711 or 52·3 per cent. Among the foreigners there are 13 males to 10 females; among the Eurasians the sexes are nearly equal; among the natives the proportion is 12 males to 10 females. Since 1881 the Native Christian element has increased very largely, their numbers then being 579 or 43 per cent. of the community; and the number of foreigners has increased by 116, while that of Eurasians has diminished by 224. These differences are probably more apparent than real as there is no known cause to account for any large increase of Europeans or decrease of Eurasians, and it is not improbable that persons who were classed as Eurasians in 1881 have in some cases claimed an European nationality on the present occasion. It is also not impossible that a similar explanation may be given for part at least of the increase among Native Christians, some of those who may be really Eurasians being classed by the enumerators as natives. Thus the numbers of the other two classes may have been unduly augmented at the cost of the Eurasian community.

Regarding sects, the Church of England has the largest number, 562 or 41.3 per cent. of the Christian population; the Roman Catholics number 541 or 39.8 per cent.; the Free Church or Church Mission or Mission Church, as it has been indifferently described, number 74 or 5.4 per cent; other sects have a few followers each, while 105 persons or nearly 8 per cent are shown as Unsectarian.

In 1881 the Church of England, or Episcopalians as they were then described, numbered 583, and they have therefore slightly diminished. Two hundred and twenty-eight (228) are Eurasians, 218 are foreigners, and 116 are natives. The Roman Catholics have decreased from 620 to 541; 416 of these are natives, 56 are foreigners, and 69 Eurasians; the number of natives of this persuasion has increased from 372 and of foreigners from 14, while the number of Eurasians has diminished by 166 or more than 70 per cent. The Free Church has increased from 18 to 74, all of whom are natives. The Presbyterians number 24, of whom 13 are foreigners and 11 natives; they have decreased largely since 1881 when there were 71 of this community. The Congregationalists, of whom there were 18 in 1881, now number 24, of whom 5 are foreigners and 19 natives. The Methodists number 11, of whom 7 are foreigners and 4 Eurasians; there were only 5 in 1881. The Baptists number 6, 1 foreigner and 5 natives; the Wesleyans are 5, all foreigners. Besides these there are 4 members of the Greek Church and 3 of the Church of Scotland. The Unsectarians comprise 19 foreigners, 16 Eurasians, and 70 natives. Of the foreigners nearly 66 per cent belong to the Church of England, 17 per cent are Roman Catholics and the remainder are distributed over all the other sects with the exception of the Free Church. Of the Eurasians nearly 72 per cent are members of the Church of England, and 21 per cent are Roman Catholics. The majority of the natives are Roman Catholics to whose Church belong nearly 59 per cent. of their number; only 16 per cent. belong to the Church of England; 10 per cent. belong to the Free Church; and almost the same number are Unsectarian. From these figures, especially those for the Free Church, it would appear that as proselytising agents the natives are the most successful.

All use subject to https://about.jstor.org/terms

Parsis.

The Parsis number 412, of whom 388 are found in the towns. Many of them are in the service of the railway and of mills and Badnera now possesses quite a colony numbering 183. In the town of Akola there are 68, in Shegaon 38, in Amraoti 33, and in Khamgaon 27. In 1881, there were only 242 in the province so that their numbers have nearly doubled; in Badnera they have been trebled. The sexes are unevenly balanced, the males being nearly twice as many as the females, and the fact implies that the majority are not settlers, but have come into the province in service or on business leaving their families elsewhere.

Sikhs.

The Sikhs number 177 and have largely decreased since 1881 when there were 525. Very few probably are true Sikhs by religion and race. One hundred and fourteen (114) of those who have returned their religion as Sikh claim to be Sikhs by caste or race; on the other hand the Sikh religion has been claimed by a few who have been shown of ordinary Hindu castes such as Teli, Wani, and Khatri; and 202 persons described as Sikhs by race have given their religion as Hindu, so that it appears that the majority under the influence of their surroundings have returned to the fold which their forefathers left.

Others.

Buddhism has been returned by a few Chinese in Akola; there are 2 Jews; and 3 Europeans have returned themselves, respectively as Deist, Agnostic, and Positivist.

The Animistic.

The Animistic have been left to be treated last as presenting some interesting features. It has been remarked that the religion of the aboriginal tribes is being gradually assimilated to Hinduism, and it might have been instructive if a comparison could have been made between the numbers who adhered to their primitive faith in 1881 and now, and to see at what rate this process of absorption is going on, but unfortunately owing to the difference of treatment in the enumeration noticed before, no comparison can be made. At the same time it is by no means certain that a comparative statement would be of much value, as the information on which it must be based would after all be of a very doubtful character. It is known that the aboriginal tribes have adopted some of the gods, forms of worship, and beliefs of Hindus, and combined them with their own, and the question as to how far the process has gone can only be answered in such an emuneration as that of the census on the very questionable authority of each individual. Persons whose beliefs in no way differ from each other may have different opinions as to the character of their creed, or having no opinion at all, may describe it variously; and it is not to be accepted without reserve that all those who have now been shown as Hindus are more Hindu than their brethren, nor that all those who gave their tribal names to their religion are less Hindu than the remainder. There is, however, no universal and recognised test which can be applied to the question, and so the plan of allowing each individual to settle it for himself is probably the best and most feasible, and probably also furnishes fairly approximate results. In the following statement, No. 21, are shown the tribes whose tribal religion is Animistic with the number of persons in each returned as Animistic, Hindu, or Musalman, with the proportion per cent of those who profess to adhere to their primitive faith. Accepting these professions of faith for the moment for the purpose of the consideration of the statement, it is seen that more than half of the total aborigines still retain an Animistic belief. The Andhs have nearly all become Hindu, and the Gaolans and Lajjhars are largely Hindu. More than half the Bhils are Hindu, and nearly one-third are Mahomedan. On the other hand the Korkus

Statement No. 21.

Tribe.	Numbers of persons by Religion.			Percentage of Animistic to tribal total.
	Animistic.	Hindu.	Musalman.	
Andh	305	43,297	...	·7
Arakh	18	235	...	7·1
Balai	78	249	...	23·8
Basod	70	26	...	72·9
Bhil	783	3,483	1,928	12·6
Gaolan (gawari)	771	35,680	...	2·1
Gond	71,990	9,058	...	88·8
Gorwan	148	13	...	91·9
Koilabhute	10	...	...	100·
Kolam	16,460	954	...	94·5
Korku	34,607	379	...	98·9
Lajjhar	97	1,763	...	5·2
Moghe	217	2	...	99·1
Nihal	2,201	104	...	95·5
Pardhan	9,170	3,766	...	70·9
Thoti	18	43	...	80·9
Total	1370,108	99,052	1,928	57·6

are nearly all Animistic, and so are a very large majority of the Kolams, Gonds, Nihals, and Pardhans. Included in the Gonds are 121 persons who, while giving Gond as their religion, have described themselves as belongiug to Hindu castes, such as Teli, Lohar, Kalal, Bhat, Burud, Otari, Mahar, Mehtar, and Mang; they probably have no connection with these castes at all, but have adopted the names in consequence of their occupations. In the same way five persons have given their caste as Pardhi and their religion as Korku; they are probably Korkus who have adopted game-snaring as a profession, and possibly they have been admitted into a gang of Pardhis.

Their distribution.

The Animistic are mostly found in the Melghat and the border taluks on the east of the province, Morsi, Chandur, Yeotmal, Kelapur, and Wun, which with Darwha contain 95 per cent. of their total number. There are none in Malkapur, Mekhar or Basim, and very small numbers in Chikhli, Balapur, Khamgaon, and Mangrul. In the adjoining statement, No. 22, is shown the proportion which the Animistic bear to the total population in the taluks where they are found in any considerable numbers. It is note worthy that there are not more of them in the hills and jungles of the Pusad taluk, but the aborigines there are mostly Andhs who have called themselves Hindus. Very few of the Animistic are found in the towns.

Statement No. 22.

Taluk.	Number of Animistic per 10,000 of population.
Melghat	7,935
Kelapur	2,628
Wun	1,997
Yeotmal	1,956

Chandur	351
Ellichpur	151
Amraoti	96
Jalgaon	60
Akot	57
Pusad	29

Incongruities.

It remains now to notice what may be called the curiosities of religions As might be expected the enumeration schedules exhibit a number of various inconsistencies; some of these have been traced back to their originators and adjusted accordingly, but there still remain others which may or may not be mistakes, and which it is desirable to mention. One hundred and twenty (120) Banjaras have given their religion as Mahomedan; the Banjaras are low caste Hindus and it is quite possible that some of them may have been converted to Islam, but the numbers are somewhat remarkable. Twenty-nine (29) persons of the same caste have given their religion as Jain which is perhaps more remarkable still; perhaps the chief characteristic of the Jains is their respect for all forms of animal life, and it is difficult to credit a gipsy people like the Banjaras with such a sentiment. Seventeen (17) persons of the Teli caste, 11 Kulals, 11 Ghisadis, 9 Kolhatis, 9 Panchals, and 1 Otari have given their religion as Musalman. Thirty-six (36) Brahmans have been returned as Jains and under the same form of religion have been entered 13 persons of the Sutar caste, 13 Kunbis, 10 Malis, 9 Sugandhis, 6 Labhanis, 5 Jats, 5 Joshis, 3 Mhalis, 2 Sonars, and 1 Gaoli, Gurao, and Halwai. One (1) Chinaman has been shown as Hindu but this is probably a mistake on the part of the enumerator, as is certainly the entry of 5 Parsis under the same religion.

CHAPTER IV.

AGE AND SEX.

TABLE VII, Part A, page 22, shows the distribution of the total population by different age-periods, and the other parts of the table give the same information for the numbers of the different religions already specified. The sex distribution is shown in all the tables.

General considerations.

The subject of the relative proportions of the sexes and the causes which tend to produce them, is one of considerable interest and importance, and it would be a matter of great satisfaction if the facts elicited at the recent census could be utilised in the elucidation of a problem, the solution of which may have momentous consequences for mankind, but which still remains to be discovered. Unfortunately it is very doubtful whether the data supplied by the census in this province in respect to age and sex can be regarded as facts at all, and the results shown by the returns are of so abnormal a character, that probably the only safe deduction is that they are incorrect. I can therefore hope to arrive at very little more than rough generalities, and it is only with diffidence and hesitation that I would be understood to express any conclusions. Generally speaking the ordinary conditions of the civilised world under ordinary circumstances are that more male than female children are born, but that on the whole female life is so much better than male life that in the total population there are more females than males, and that in respect to age there is a gradual declension in numbers from childhood to the close of life. In Berar while the statistics furnished by the registration of births show an excess of male births over female, the census returns give more females than males under one year of age, many more males than females in the total population, and great irregularities of proportion in the sequence of ages.

Proportions of the sexes.

In the adjoining statement are compared the proportions of the sexes in a number of countries, and it will be seen at once how largely the position of Berar differs from nearly all. The population of Canada and of the whites of the United States are of course exceptional, and the balance of the sexes is largely influenced by the preponderance of males amongst their immigrants. The remaining countries where females are in excess are indeed all in Europe, and it may be that the difference in the conditions of life is sufficient to account for the diversity of the proportions, but even among Indian populations Berar takes a somewhat extreme place. In some respects, however, Berar may be regarded as in the exceptional position of a comparatively new country, as, although there are no old census records to refer to, there is little doubt that there has been very extensive immigration and settlement since 1853, when the province was assigned to British administration, and that therefore the normal conditions of a country settled for several centuries or even generations cannot be expected to apply.

Statement No. 23.

Country.	Number of females to 1,000 males.
Portugal	1,091
Scotland	1,076
Sweden	1,061
Norway	1,061
England and Wales	1,055
Austria	1,047
Spain	1,045
Ireland	1,043
Germany	1,043
Switzerland	1,041
Denmark	1,036
Hungary	1,030
Holland	1,023

The present census shows an increase of 6 per 1,000 in the proportion of females to males above that at 1881, when the returns gave 936 females to 1,000 males. This difference cannot perhaps be regarded as indicating an increase among females relatively to males, but rather a fuller enumeration of the women. At the census of 1867 the female proportion was 935, so that it may be said that on this occasion we have made some advance towards overcoming the prejudice against, and other obstacles to, the complete enumeration of females, but their numbers even now are probably considerably understated. The balance of the sexes is no doubt partly disturbed by the numbers of the immigrants amongst whom the male element predominates, but of those who have been returned as born in Berar there are only 957 females to 1,000 males.

Urban conditions.

It is to be expected that the male element should be stronger in the towns than in the rural tracts owing to the greater variety of urban occupations that are followed by men whose families are resident elsewhere, and the larger the town and the less agricultural its inhabitants, the stronger the male element. In all the towns together the proportion of females is 919 to 1,000, and in the three towns which have a population of more than 20,000 it is only 878. Deducting the urban population,

District conditions.

the proportion in the rest of the province is 945. In the different districts it is as follows:—

	Females to 1,000 males.		Females to 1,000 males.
Buldana	965	Ellichpur	938
Wun	951	Akola	935
Basim	944	Amraoti	927

In Buldana both the strictly urban population and the immigration from distant provinces is comparatively small, and consequently equilibrium between the sexes is more nearly approached; in Amraoti, on the contrary, the disturbing elements are in the greatest force, and the balance is most upset.

Taluk conditions.

The adjoining statement, No. 24, shows the proportion of the sexes in each taluk for both 1891 and 1881, and a comparison of the figures affords some measure of the improvement in the enumeration. In 16 of the 22 taluks the proportion of females has risen. In Malkapur the increase has been remarkable, and is due to the large influx of females from Khandesh. In Balapur the increase is even greater but the proportion attained is not nearly so high. In Akot also there has been a considerable rise, and in both these taluks the increments considered in the light of the decrease in the population point to the large emigration of males and to the possibility that, as they have left their women behind, these emigrants may return and restore the normal condition of a gradual growth. In Chandur the decrease in the proportion of females is attributable to the preponderance of males amongst the immigrants, the excess of male over female immigrants in this taluk being about 4,000; but this cause is not assignable for the fall in Morsi, Murtazapur, Jalgaon, and Mangrul; in the last-named taluk

indeed the number of female immigrants considerably exceeds that of the male. In Murtazapur and Mangrul the proportion is very low, and taking this fact in conjunction with that of a fall since 1881, and with the absence of any known disturbing influence, it seems probable that in these two taluks at least the numbers of the women have been largely understated. The largest proportion of females is found in Wun as it was in 1881; in Kelapur also the proportion is comparatively high, and the figures afford satisfactory indication of the permanent character of the immigration into these two taluks which, as has been shown, has been considerable. In Khamgaon the smallness of the proportion of females is extraordinary: it is no doubt to a great extent due to the disproportion of the sexes in the towns of Khamgaon and Shegaon, which are largely of a commercial character; in the town of Khamgaon the proportion of females is only 771; in Shegaon it is 892, and in the two towns combined, it is 825; but even when the urban population is eliminated, the proportion in the rest of the taluk rises only to 937. Were it not for the uniformity of the proportion (905) with that (902) at the census of 1881, the conclusion would be irresistable, in the absence of any other explanation, that the women have escaped enumeration in considerable numbers, but unless some systematic method of concealment was adopted on both occasions the parity of the proportions precludes the supposition. In Daryapur the disproportion of the sexes is also great considering the agricultural character of the taluk and also the fact that, amongst the immigrants, the females exceeded the males by more than 3,000. The inference is that there has been a large emigration of males, or that here too the enumeration of the females has been very incomplete.

Conditions in religious communities.

Coming now to the proportion of the sexes amongst the followers of the different religions, we find the following figures :—

	Females.		Males.
Among Hindus there are	942	to	1,000
„ Mahomedans there are	922	„	1,000
„ Animistic there are	991	„	1,000
„ Jains there are	887	„	1,000
„ Christians there are	84	„	100
„ Parsis there are	52	„	100
„ Sikhs there are	8	„	10

In 1881 the proportions for the principal religions were: Hindus, 937; Mahomedans, 929, Aboriginies, 993, and Jains 862. The rise among Hindus is almost analogous with that in the whole population of which they form so large a part. For the fall among Mahomedans there is no known cause, and it is more than probable that the numbers of their females are understated. Among the Animistic we have the nearest approach to equilibrium between the sexes, as was the case with the smaller class of aborigines in 1881. The rise in the proportion of females among the Jains, coupled with the decrease in their total numbers, points to the departure of a large proportion of single males, many of whom were probably amongst the immigrants in the period prior to 1881, and who, becoming subsequently dissatisfied with their prospects in the province, have emigrated again.

Proportions of the sexes at different ages.

We come now to a consideration of the proportions of the sexes at different age-periods. Statement No. 25 gives this information for the total population and for each district, and Statement No. 26, for each of the principal religions. Diagram No. 3 illustrates the proportions in the total population and compares them with those obtaining in England and Wales. Diagram No. 4 compares the proportions between Hindus, Mahomedans, and the Animistic tribes.

The most noticeable feature in these statements is the deficiency of females from 10 to 14 years of age, which is common to the whole population, regarded from the basis of locality or of religion, and which is compensated for by a corresponding excess of females through the period from 15 to 19 years up to that from 20 to 24, in which it is very high. Among the Jains and Mahomedans the excess is not reached until the latter of these two periods, but the proportion of total females to males among the followers of these religions is less than in the rest of the population. Other general features which are seen at a glance in the diagram are the large proportion of females amongst children, the relative decrease of females at the odd decennial periods from 35 to 55 years, and finally, the excess of females from 60 years of age. Generally, with the exception of the period from 10 to 14 years of age, the females are in excess of the males from infancy until the 25th year, and again in old age. The great deficiency from 10 to 14 years and the corresponding large excess in the next two periods is certainly unreal and due to a misrepresentation of age. The same peculiarity characterised the age returns of 1881, as the following comparison will show:—

		5 to 9	10 to 14	15 to 19	20 to 24
Females to 1,000 males	1881	1,008	814	1,059	1,229
	1891	1,024	820	1,047	1,196

Upon the figures for 1881 Mr. Kitts remarked:—"This (10—14) is the period of puberty, and hence even when the age is accurately known, prevarication, especially in the case of girls, is to be expected." This failing was not peculiar to Berar, but was common to all India, and here at least appears unfortunately to be as prevalent now as then. Whatever may be the object of the deception, there appears to be no doubt that the ages of a large proportion of girls of a marriageable age are systematically incorrectly stated. Judging from the returns, it would appear that a small proportion are understated, but that the great majority are exaggerated. Those which are understated are probably the unmarried, parents being possibly loath to admit the existence of an unmarried daughter of marriageable age, but why 5 years or more should be added to the age of a married girl is not easily explicable. It is possible that the true explanation is that the large numbers in the period from 20 to 24 is due to understatement of women of more advanced ages, which, judging from the habits of ladies elsewhere, may be regarded as a sexual foible, and that the deficiency from 10 to 14 is due to actual concealment. The total numbers of the sexes, coupled with the increase of females relatively to males since 1881, point to some deficiency in the enumeration of females then and in 1891, but the coincidence in the proportions at these ages then and now, and above all the compensating character of the fall and rise, seem to weaken the supposition that that is the whole explanation. More probably each of these causes has contributed to the final result: some actual concealment of women, especially in the period from 10 to 14; some understatement of age of those of these ages who are unmarried; some overstatement of age of those of these ages who are married; and some understatement of age of those above 25 years of age.

Examining the figures in further detail the following points are noticeable.

District conditions.

In the Amraoti district the male infants are just in excess of the female; and there, as elsewhere, the proportion of females rises from infancy until the 4th year of life when the number of girls to 1,000 boys varies from 1,110 in Ellichpur, to 1,173 in Buldana. In the 5th year male life begins relatively to improve, but except in the Basim district the number of females is still in excess from the 6th to the 10th year. The big drop in the next period is succeeded throughout by an excess in the one after, and this is largely increased in the period from 20 to 24, the ex-

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

treme being reached in the Buldana and Wun districts. From 25 to 29 years comes another big drop, although in the Wun district the females are still in excess; and from this age until the last period female life is relatively bad, and males are largly in excess.

Among religions.

Turning to the religious divisions, it is seen that the general characteristics apply to the Hindus. Among Mahomedans male infants are slightly in excess, and, as has been before noticed, the males are in excess in the period from 15 to 19 years, but to a very much less extent than in the previous period. Among the Animistic the females are in excess up to the 35th year with the exception of the 10 to 14 period, and the males are in excess for the rest of life. In the period from 20 to 24 the women attain the large proportion of 1,370 to 1,000 men, a feature which is brought markedly to notice in the diagram. Among the Jains while the male infants outnumber the female, there is a remarkable excess of females in the second year of life, which, if accurate, points to a very heavy mortality among Jain males relatively to females at that age. The males are in excess in the 5th year, and after the 9th year the females are only in excess during the period from 20 to 24 years and from 60 years.

Comparison with England and Wales.

In Statement No. 27 are compared the proportions of the sexes at the different age-periods in this province and in England and Wales. It is to be noted that the period of from 10 to 14 years, so apparently fatal to girls in India marks a decrease in female life in England also, although to a small extent only. It is to be observed also that the period of from 20 to 24 years is characterised by a large increase of females in both countries, but from thence onwards while males preponderate in Berar until the last period, females are in excess in England throughout. This difference is to some extent to be explained by the preponderance of male immigrants in Berar on the one hand and the emigration or foreign service of male adults from England on the other; but the chief inference to be gathered from this statement is the comparatively exaggerated, and therefore probably unreliable, character of the Berar figures. This exaggeration is most conspicuous among the Animistic and Mahomedans, as may be seen on reference to the diagram No. 4.

Statement No. 27.

Number of Females to 1,000 Males.

Age.	England, and Wales.	Berar.
Under 1 year	998	1,011
1 year	1,004	1,073
2 years	1,003	1,091
3 „	1,006	1,142
4 „	1,004	1,043
TOTAL UNDER FIVE YEARS	1,003	1,071
5—9 years	1,006	1 024
10—14 „	997	820
15—19 „	1,008	1,047
20—24 „	1,093	1,196
25—29 „	1,087	941
30—34 „	1,077	886
35—39 „	1,069	766

45—49 „	1,103	715
50—54 „	1,104	838
55—59 „	1,111	744
60 and over	1,187	1,033

Generalising on the whole subject, and allowing for concealment of women and misrepresentation of age, it seems probable that the females are in excess from shortly after birth and remain moderately so until about the 20th year, and that then males predominate until old age is reached, when the numbers more or less coincide.

Excess of female children.

The preponderance of females among infants is a point that demands further examination in view of the fact that the birth statistics of the province invariably show an excess of male over female births. In commenting upon the returns of the last census which presented very similar features, Mr. Kitts, while admitting that an excess of male over female births is always expected, came to the conclusion that the age returns for the first five years of life "unmistakably"

All use subject to https://about.jstor.org/terms

proved the contrary, and remarked "that if the mortality in both sexes was uniform from the date of birth to the taking of the census, the ratio of the births is 103 females to 100 males." It is possible, however, that the mortality is not uniform, and the subject has to be considered on that hypothesis. The registration of births is admittedly incomplete, but it may be assumed that any shortcomings would apply equally to either sex. It has been argued that the registration of females is more commonly omitted owing to the comparative unimportance attaching to that sex in the native mind, but this is only a supposition and not a demonstrated fact, and it is as plausible to presume that where registration is omitted it is the fact of the birth itself, irrespective of sex, which escapes notice either through defective arrangements of the registering authority, or through ignorance or indifference on the part of the parents. On this assumption the incompleteness of the birth statistics may be disregarded in a consideration of the proportion of the sexes. In the Report of the Sanitary Commissioner for 1890, the proportion of the sexes in the births registered during the year is shown to be 1,066 males to 1,000 females. Approximately speaking those individuals returned at the census in February 1891 as under one year of age may be taken as the survivors of those born in 1890, the births in January and February of one year, a comparatively small number, being set off against those born in the same period of the other. Among the survivors, however, we find the position reversed, and instead of a preponderance of males, it is seen that there are 1,011 females a 1,000 males. Taking the details for each district, we get the following comparative statement:—

Statement No. 28.

Number of Males to 1,000 Females.

District.	Born in 1890	Enumerated in 1891.	Diminution per cent.
Amraoti	1,070	1,001	6·4
Akola	1,063	994	6·5
Ellichpur (excluding Melghat)	1,071	1,007	6·0
Buldana	1,045	978	6·4
Wun	1,111	985	11·3
Basim	1,048	986	5·9

The figures in the first column are derived from the birth statistics given in the Sanitary Commissioner's Report, and the figures in the second column are obtained from the census returns. On the assumption that the proportions of the sexes in the statistics of birth are only approximately accurate, this statement shows very clearly the diminution of males relatively to females during the interval between birth and census; and as females cannot have increased in number, the only inference is that mortality is much higher among male infants than among female. In the Wun district it is seen to have been much higher than elsewhere, and in the remaining districts it was of more or less uniform proportions. Turning now to the numbers of deaths of children under one year registered in 1890, we find some correspondence between the results, the registered male deaths in the province being 16 per cent higher than the female. The district details certainly do not tally; Wun does not show a larger proportion than the rest; but they all agree in showing an excess male mortality which varies from 13 to 19 per cent. The evidence, therefore, being in favour of relatively high male mortality, there is no reason to doubt the assertion that male births exceed female notwithstanding the preponderance of female infants at the census.

Measure of error in the vital statistics.

Before leaving the subject of the registration of births and deaths, it may be as well to show here to what extent the censns returns afford a measure of the incom-

All use subject to https://about.jstor.org/terms

pleteness of registration. Again treating the numbers enumerated at the census as under one year of age as the survivors of those born in 1890, we have the following equation: that the total births in 1890 equal the total infant deaths in 1890, *plus* the survivors in 1891. Now, the registered births in 1890 were 111,450, and if x represents the unregistered births, the total births $= x + 111{,}450$. The registered deaths of infants numbered 23,843, and if y represents the unregistered deaths, the total infant deaths $= y + 23{,}843$. The survivors we see from the census table numbered 93,148. Thus we get $x + 111{,}450 = y + 23{,}843 + 93{,}148$, or $x = y + 5{,}541$; that is to say the unregistered births exceed the unregistered infant deaths by 5,541. If now we may assume that the chance of a birth or a death escaping registration is equal, and there is, *primâ facie*, no reason why deaths of infants should be more accurately registered than births, or *vice versa*, the ratio of unregistered births to registered births equals the ratio of unregistered deaths to registered deaths, or $\frac{x}{111{,}450} = \frac{y}{23{,}843}$, and from these two equations it will be found that x, the number of unregistered births, is 7,049, and y the number of unregistered infant deaths, is 1,508; and consequently that the total number of births in 1890 was 118,499, and the total number of infant deaths was 25,351. This gives 40·9 per mille as the birth rate for the province in 1890. It is probable, however, as will be shewn later on, that the census return of children under one year of age, that is, the "survivors" in the equation, is somewhat overstated and the error in the registration is therefore probably something less than that arrived at.

Age distribution of each sex.

We pass now to a consideration of the age returns for each sex independently of their relative proportions to each other. Statement No. 29 shows the distribution of 10,000 persons of each sex in the province at the different age-periods, and compares them with the corresponding figures for 1881 as well as for England and Wales and for Jamaica. Jamaica has been selected for comparison as a fertile tropical island whose climatic conditions are not entirely dissimilar, and which is occupied by a negro population whose education and intelligence is probably much on a par with that of the native of Berar. The diagrams, No. 5 to No. 9, illustrate the details given in this table. Statement No. 30 gives similar information for each district; Statement No. 31 for each taluk; and Statement No. 32 for each of the main religions.

Before examining these statements, however, I wish to direct attention to Statement No. 33 which gives the actual numbers returned at each year of age in a number of blocks selected indifferently from various parts of the province, but avoiding the localities inhabited by the Animistic or any specially uneducated class, so as to procure a return representative of the average intelligence of the province. It will be observed that there is a very large decrease in the second year of life, and that thereafter there is a distinct prominence in the numbers recorded for the ages of 5, 7, 10, 12, 15, 16, 18, 20, 22, 25, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 80, and 90, and that of these from and after 30 the even multiplies of five are more popular than the odd. The comparatively small number of the age of one year was also a feature in the returns for 1881, and the explanation offered was based upon the consequences of the previous immigration from the famine districts in 1877 and 1878. The repetition of the feature at this census shows that the true explanation must be sought in some more constant factor. A very simple cause, which is probably responsible for much of the discrepancy, is to be found in the wording of the enumerator's instructions; instead of recording a child as "under one year," he was directed to write "infant", and he would naturally include in the same category all those whom their mothers described as such; but a mother would probably describe her child as an infant so long as it was not weaned, and as some children of one year of age are not

weaned, they would be entered as infants instead of as of one year of age. Thus the number of infants is probably exaggerated, while those of one year of age are unduly diminished. The vital statistics, so far as they can be relied upon, lend force to this explanation. The numbers against the age of 5 no doubt include some of 4 and some of 6 years of age, and those of 7 include some of 6 and some of 8, the numbers 5 and 7 being apparently more popular with the ignorant and uneducated. "Ten or twelve" is a common way of expressing the age of a child there or thereabouts, while 11 and 13 are comparatively rarely given. "Fifteen or sixteen" is again a common expression for adolescence, and 18 seems to be popular, but 17 or 19 are very infrequently heard. 20 marks the commencement of adult life, and 21 is rare; 22 seems to be a comparatively favourite number, but why I do not know. 25 represents the attainment of full maturity, and thence-after life moves on in stages of 5 or 10 years at a time, and only pedants note the intermediate steps. Such appear to be the conceptions of the ordinary native of Berar; and with a population who only deal with round figures or a few popular numbers, and whose notions of years are extremely vague, it is impossible to obtain statistics of age which can be of much value.

Taking them, however, for what they are worth, and referring to Statement No. 29 and the diagrams, we find among males a very fair proportion of boys under 10 years of age, but a very large proportion of girls in comparison with the other countries described. There are more boys also between 5 and 9 than under 5, which is contrary to expectation and opposed to the conditions in the other countries. From 10 to 14 there is a declension among the boys which brings their number down to that in England and much below that in Jamaica. Among girls the decrease is sufficient to bring their number considerably below that of both countries. In the next quinquennial period there is a particularly sharp decline among the boys, and the numbers of both sexes are considerably below that of the other countries, which approximate closely to each other. In the next period the numbers of both sexes rise, the females more rapidly than the males, and the rise is continued, but at reversed rates, in the period from 25 to 29, when the number of males is larger than in the other countries, and the females, though more numerous than in England, are almost identical in number with those in Jamaica. From 30 to 34 the males again increase, and both sexes are in excess of what we may regard as normal. No doubt the large proportion of the population of both sexes between the ages of 20 and 34 is attributable to the presence of immigrants, the majority of whom may be expected to belong to that period of life; but while the great decrease of girls between the ages of 10 and 19 is susceptible of some explanation and possible modification on the grounds of concealment or misstatement of age, no apparent cause can be shown for the equally large decrease among boys of the same age. From 35 years, or rather, practically, from 30 —as comparatively very few give any intermediate age—until 60 years, the numbers vary so irregularly, as the zigzag course of the lines in the diagrams exemplifies, that no comparison is possible beyond this that the differences are more sharply accentuated among females than among males, that is to say, in other words, among the most illiterate section of the people. Taking a mean, however, between the variations, the number of males is somewhat higher than in England, and the number of females somewhat lower, whilst the numbers of both sexes exceed those of the negro population. Coming to the period of old age both sexes show smaller numbers than either England or Jamaica, and all three countries exemplify the condition of more old women than old men.

Comparing 1891 with 1881 there is not much to remark upon, but it is to be observed, and is a matter for congratulation so far as it goes, that the extremes of variation in both sexes are less accentuated now than they were ten years

ago, the reason for which may, it is to be hoped, be found in the growth of education and intelligence, and in the propagation, slow though it may be, of a tendency to make some approach to accuracy.

Among religions.

Coming now to the religious divisions of the population, we find that the extremes of variation beyond the period 30—34 are most conspicuous amongst the Animistic, which is also the most illiterate class, and most moderate among the Jains who are the best educated, and more marked among Mahomedans than among Hindus. The Animistic have a very high proportion of children of both sexes both under 5 years of age and from 5 to 9. The Hindus have more children than the Mahomedans, and the Jains have an unusually small number. In the period from 10—14 the Jain males show the exceptional condition of an increase in numbers and the decrease in the number of females of these people is proportionately less than amongst the rest. The Animistic have a higher proportion than the rest in the first 34 years of life. especially of females, and amongst all there are more females than males in this section of life, notwithstanding that there are more females than males over 60 years of age except only amongst the Animistic. The women of the Animistic tribes lead a life of labour which may be the cause of their earlier decease, and the large proportion of the young shows that both sexes are comparatively short-lived. They live for the most part in the jungles out of reach of even the most elementary medical assistance, and their food supplies are probably also much more limited in variety if not in extent, and inferior in quality to those procurable by the ordinary population located nearer the centers of civilisation.

Among local divisions.

Turning to the details of the local divisions of the province (Statements Nos. 30 and 31), we find a considerable range of variation, but if we except the middle periods of life from 15 to 34 years, we see a marked tendency towards a distinction between the statistics for the three districts of the plains, Amraoti, Akola, and Ellichpur (especially if the Melghat taluk is eliminated), and those of the southern hilly region. There is a larger proportion of children in the southern districts than in the northern, and a smaller proportion of the middle-aged and elderly. The smallest proportion of children is in Akola; the largest in Basim. The greatest decline in the period from 10 to 14 years is also in the Basim district, and the least in Ellichpur. The most old men are in Amraoti, the most old women in Ellichpur; the fewest old men in Basim and the fewest old women in Buldana. Pursuing the enquiry into taluks, we find that of male children under 5 years of age there are less than 1,200 per 10,000 in Ellichpur, Akola, Amraoti, and Akot, and on the other hand as many as 1,574 in Pusad and more than 1,400 in Wun, Kelapur, Basim, and Melghat. Of girls of this period the smallest numbers are in Khamgaon, Amraoti, and Daryapur, and the largest in Pusad, Melghat, and Basim, the numbers in Pusad attaining the high proportion of 1,807. The greater decline among females in the period from 10 to 14 years is found in all the taluks of the Wun and Basim Districts, and in Mehkar and Melghat. The most conspicuous extremes of variation are in Pusad, Basim, Kelapur, and Mehkar. Of persons over 60 years of age, the Ellichpur taluk has a markedly higher number of each sex, and Melghat an equally marked lower number than any other. Amraoti, Morsi, and Daryapur have also comparatively large numbers of old people, and Mehkar, Pusad, Chikhli, and Kelapur, are conspicuous for their small numbers. If we take longevity of life as a criterion of health, the north-eastern portion of the province shows a marked superiority, while Melghat with its mountainous jungles is as distinctly the most insalubrious. Of the rest the least healthy would appear to be Pusad, Kelapur, and Mehkar, of which the two former are next to Melghat the most prominent for more or less hill and jungle.

Proportion of the working population.

The relative proportion of the working population to that supported by it is a question of some interest, and some light can be thrown upon it by the statistics of age, although of course only to an approximate degree. Taking the working age of males as from 18 to 59, inclusive, and that of females as from 15 to 44, inclusive, and deducing the proportion from the figures given in Statement No. 33, which deals with about a fortieth part of the total population, we find that in 10,000 males there are 5,366 workers, and in 10,000 females 4,643 workers, or combining the sexes there are 5,005 workers to 4,995 non-workers, that is to say, the productive population is just more than half the total. The population dealt with in the statement is, however, not representative of the whole, as it does not include such classes as the Animistic nor many urban residents, and a different result might be arrived at in deducing the proportion for the whole population, but this I am not in a position to calculate, as the numbers of the ages of 18 and 19 years for the whole population have not been separately tabulated. Many males, however, commence to be productive before the age of 18, and many cease to be workers before the age of 60, and I think that a fair approximation of the productive population may be arrived at by taking the males from 15 to 54, inclusive, and the females as before from 15 to 44. On this basis are obtained the results given in the marginal Statement No. 34, which shows the proportions for the whole population and for each district. It will be observed that the districts divide themselves again into the two classes of north and south, Amraoti, Akola, and Ellichpur having a majority of the workers and the southern districts a majority of non-workers. It may be of some advantage to compare the proportions for Berar with those for some countries of Europe and elsewhere, and the latter are therefore shown in the adjoining Statement No. 35. These calculations are, however, based upon the assumption of the age of the productive class being from 20 to 59, which is considered as more appropriate to the different conditions of life in the countries named than the earlier period adopted for this province. The proportion for Berar calculated upon the same basis would be 4,925 workers to 5,075 non-workers. France has, or rather had in 1886, a considerable majority of workers, but with that exception in all the countries mentioned the non-workers predominate.

Statement No. 34.

	Workers.	Non-workers.
Province	5,063	4,937
Amraoti	5,172	4,828
Akola	5,207	4,793
Ellichpur	5,153	4,847
Buldana	4,992	5,008
Wun	4,862	5,138
Basim	4,926	5,074

Statement No. 35.

Country.	Workers.	Non-workers.
France, 1886	5,239	4,761
Italy, 1881	4,960	5,040
Austria, 1880	4,898	5,102
Sweden, 1880	4,811	5,189
Holland, 1879	4,709	5,291
Germany, 1885	4,703	5,297
England, 1881	4,635	5,365
Scotland, 1881	4,548	5,452
Jamaica	4,479	5,521
Canada	4,370	5,630
Ireland, 1881	4,352	5,648

Mean age.

The last point to be dealt with is that of the mean age, and this can be only approximately calculated from the quinquennial age-periods by taking the averages of each period. On this basis the mean age for the total population in Berar is 25·30 years. In 1881, it was shown to be 25·25, and the increase would imply an improvement of life during the last 10 years, but that very little reliance can be placed on such inaccurate data as the age returns. Taking the population whose ages are given in statement No. 33, which gives the numbers for each year of life, and which therefore enables us to ascertain the exact mean for

the numbers dealt with, we find that the mean age of the males is 25·10 years and of the females 23·94. There is, however, probably little doubt that the true mean is higher than this. Among the old, whose ages should raise the average, there is a general tendency to understatement, although in a few individual instances the reverse may be the case even to exaggeration. A person of 60 years of age will frequently according to his or her own view remain 60 for an indefinite period, and a very large majority of those actually between 60 and 70 will give 60 only. On the other hand, a person who possibly has attained 80 years will probably claim 100, but the numbers of these are of course comparatively few, and the excess due to exaggeration does very little to counteract the deficiency due to the understatement of the others.

CHAPTER V.

CIVIL CONDITION.

THE different parts of Table VIII (pages 58 to 125) show the distribution of the population for the whole province and for each religion under the three conditions of unmarried, married, and widowed.

Social aspect of marriage.

The marriage institution in this country is not so strictly defined as it is in Europe. Many women are maintained under conditions which, while perfectly moral and socially recognised, do not amount to more than concubinage; and although every endeavour was made at the enumeration to confine the description of married to those subject to a legal tie according to the law applicable in each case, yet it is possible that some misrepresentations may have been made. There is, however, nothing in the returns to indicate the existence of any error of this description, but it is desirable that such a possible source of inaccuracy should not be overlooked. Marriage in India also is not what it frequently is in Europe, an index or measure of prosperity. Wife and children here too are no "hostages to fortune," for they are fellow-workers and assistants rather than "impediments to enterprise." Poor people may indeed be temporarily deterred from marriage by the initial expenditure attendant upon the ceremony, which is frequently of a recklessly improvident character, but sooner or later the necessary funds are raised, and even the very poorest can marry. But notwithstanding the absence from the statistics of marriage of some of the elements of interest found in Europe, they are among the most instructive which the census returns supply, and throw considerable light upon the customs of the people and the social problems of the day which zealous reformers are eager to solve. In dealing with the subject it will unfortunately be necessary to introduce a number of tabular statements, seldom objects of attraction to the reader, but I have endeavoured to limit them to what is essential for the illustration of the different points of interest, and I think that they will repay attention.

The actual numbers of the population in each condition are as follows:—

	Males.	Females.
Unmarried	572,594	370,446
Married	833,575	810,883
Widowed	85,657	224,336

Proportion of both sexes in each condition.

Taking the males alone, 38 per cent are unmarried, 56 per cent are married, and 6 per cent are widowed. Of the females 26 per cent are unmarried, 58 per cent are married, and 16 per cent are widowed. At the census of 1881 it was found that Berar contained the most married population in India, and although the proportion has now slightly decreased, the situation is probably still maintained. The proportions at the two enumerations are here given—

	Males.		Females.	
	1881.	1891.	1881.	1891.
Unmarried	38·4	38·4	25·9	26·3
Married	56·2	55·9	58·5	57·7
Widowed	5·4	5·7	15·6	16·0

Amongst males the proportion of unmarried is the same, and consequently

that of those who have married, but the proportion of widowers has increased; amongst females the proportion of widows has also increased, and so has that of the unmarried. Regarding the latter fact in conjunction with that of the increase of females relatively to males noted in the previous chapter, it seems probable that the difference is due to a fuller enumeration of the unmarried females on this occasion. In the adjoining statement, No. 36, are compared the proportions in Berar with those for all India in 1881, and with those for some countries in Europe. The proportions of the married are very much higher in India than in Europe, as might be expected, and in Berar much higher than in India generally. The high proportion of widows in India is also remarkable, but in this respect Berar shows a smaller number. With regard to widowers, the variations are not so extreme; in all the countries the proportion of widows is much higher than that of widowers, and in both France and Italy the number of widowers relatively to the number of married men is higher than in Berar.

Comparison with other countries.

Statement No. 37 gives the proportions for each district and each taluk in the province, and Statement No. 38, for each of the main religions. It will be seen that the proportions of the married are much higher in the Akola and Buldana districts than elsewhere. Khamgaon has an exceptionally high proportion in both sexes, and it will be remembered that it was in this taluk that an exceptionally small proportion of females to males was found. In Jalgaon, Balapur and Akot, all of the Akola district, and in Malkapur and the Wun taluk the proportions are high. In Melghat the conditions are entirely different from the rest of the province, and approximate to what may be described as a European standard. Excluding this taluk the smallest proportions of married are to be found in Pusad, Yeotmal, Darwha, and Kelapur. The difference between Wun and the other taluks of the Wun District is very marked. So is that, but in the reversed condition, between Pusad and the other taluks of the Basim district. The widowed are most conspicuous in Ellichpur, Daryapur, Akot, Murtazapur, and Amraoti, the widows in Ellichpur attaining the high proportion of 19 per cent of the female population. In the Wun taluk in particular, and in the Wun district generally, the proportion of widowed is comparatively small. Coming to the religions it will be seen that the highest proportion of married is shown by the Hindus, and the lowest by the Mahomedans. The Jains have a much larger proportion of married women than men, and a very high proportion of widows. The Animistic have a very small proportion of widowers, and a comparatively small proportion of widows. Among Mahomedans the number of widows relatively to married women is very high.

From these general conditions we proceed to examine the marriage statistics in connection with the age returns, which reveal several important features. Statement No. 39 shows the distribution of the population by civil condition at each age period, and statement No. 40, the distribution by age in each condition. In No. 39 the distinctive element is the age, and in No. 40 the civil condition, in both the figures should be read horizontally. Thus, in No. 39, it will be seen that out of 10,000 males under five years of age 9,901 are unmarried, 95 are married, and 4 are widowed, and from No. 40 out of 10,000

unmarried females 5,466 are under five years of age, 3,476 are between the ages of five and nine, and so on. The proportions given in statement No. 39 are also given in a graphic form in diagram No. 10. The most noticeable general features are that the females marry at a much earlier age than the males, and become widowed very much sooner. The statements, however, show that of the males a considerable number do marry at very early ages, and the numbers of married rapidly increase at each age period until about the 25th year, by which time more than four-fifths of the sex have entered matrimony. Thenceforward, the numbers continue to increase, but with gradually diminishing strength until the close of life. Less than 2 per cent of those over 60 years of age remain unmarried. There are widowers of all ages, but their numbers begin to acquire an appreciable importance about the 20th year, after which they increase with each period until in the last they amount to more than 28 per cent of the numbers of the sex of 60 years or more. Nearly 98 per cent of the unmarried males are under 35 years of age, and in an average group of 1,000 bachelors there would not be more than 3 who could be described as old men. Fifteen per cent of the married males are under 20 years of age, and nearly 69 per cent of the widowers are of 40 years or more, while more than 4 per cent are under 20. Turning to the other sex, 3 per cent of the girls under five years of age are married; of those between the ages of 10 and 14 years three out of every four are married, and including those who have already lost their husbands 8 out of every 10 have been married. Only one woman in a hundred attains to about the 25th year unmarried. With infant marriages there are infant widows, and their numbers assume importance from the age of 10 and gradually increase until about the 25th year, after which they advance with great and growing rapidity until amongst those of 60 years of age or more they amount to the large proportion of 86 per cent. Out of 100 unmarried females 55 are under 5 years of age, 89 are under 10, and 97 are under 15; there are two between 15 and 30, and one of more than 30. Old maids are very scarce; out of 1,000 unmarried women there are only 6 above the age of 34, and only 2 of 50 years or more. Of 1,000 married females 8 are under 5 years of age, 96 are under 10, and 223 are under 15; only 83 are more than 44 years old. Of 1,000 widows one will be less than 5 years of age, seven will be under 10, 20 under 15, 30 under 20, and 49 under 25. If we take 30 as the age up to which a widow might hope to remarry, if there were no social impediments in the way, and it is not probable that many would possess sufficient attractions at a later age, the chance of remarriage could only come to 8 in every hundred widows. More than three-fourths of them are over 40 years of age.

Distribution by condition at each age-period, and by each age in each condition.

It is to be observed that in both sexes there is a diminution in the numbers of the unmarried in each successive age period from the first to the last, and this might be regarded as indicating that in each age period there are a certain number who marry. If there were no marriage at advanced ages, and the death-rate of the unmarried

Gradual diminution in numbers of unmarried at each age.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

were the same as among the rest of the community, the proportion of unmarried would remain constant, and its steady diminution implies either marriage at all ages up to 60 or a more rapid mortality among the unmarried. Marriage at advanced ages is not uncommon amongst men, although it is probable that it is more often widowers who remarry than old bachelors who take to themselves wives, but amonst women it seems highly improbable that any elderly spinster should marry, and in their case at least, even if it does not apply to both sexes, we are forced to the conclusion that the unmarried have comparatively shorter lives.

Comparison with India and Europe.

A comparison of the conditions in Berar with those maintaining in India generally in 1881, and in one European country, is given in Statement No. 41. France has been selected as the details of all the age periods for England are not available to me. It is seen here that in Berar both sexes marry at a much earlier age than in India generally, and the proportion of the widowed young is consequently greater also. It is curious that in all India and in Berar of the widowed persons under 15 years of age the males exceed the females. If the number of infant widows is due to the marriage of young girls with old men, it would seem from these figures that young boys are married to still older women. The true interpretation, probably, is that boy bridegrooms are wedded to baby brides, of whom a large proportion die in infancy. The proportion of widowers is indeed in excess up to 39 years of age, and this is probably to be accounted for by the greater mortality of women during the child-bearing age. This is not the case in France nor in Europe generally, and the inference is that in Europe female mortality relatively to male at this period of life is not so great as in India, or in other words, that women in child-birth are better cared for in Europe. Of the widowed of 50 years of age and over, the proportion in Berar in both sexes is higher than the all-India figures, which points to better life in Berar than the average for India, or to less remarriage, and the greater disparity between the sexes of the elderly widowed which distinguishes Berar would seem to imply a greater disparity of age between husbands and wives than is usual in India generally. Comparing the figures for Berar with those for France, the main feature is the much later age for marriage in the latter country, and the consequent postponement of the period of widowhood. Three-fourths of the widowed in France are 50 or more years of age, whereas in Berar about one-half are of this age; in other words, the widowed in Berar under 50 years of age are about twice as numerous proportionally as in France.

Mean age in each condition.

It may be of interest to consider here the mean ages of the population in each condition, which are as follows:—

	Males.	Females.
Unmarried	9·45 years	5·71 years
Married	35·05 „	26·51 „
Widowed	47·17 „	50·08 „

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

These figures are the averages of the combined ages of the people of each sex in each condition, and being spread over wide variations are not of much value except for comparison between the two sexes and for a few very general deductions. Husbands are on the average 8½ years older than their wives; but when it is remembered that there are a large number of males married as children between whom and their wives there cannot be anything like this difference, it will be realised that in the marriages which take place in the later life of the males there must be a very considerable discrepancy between the ages of husbands and wives. The married life of the man lasts, it appears, some four or five years longer than that of the woman, who spends half her life in widowhood.

Statement No. 42.

Showing the percentage of those who have married (married and widowed) to total number of sex at each age period.

Characteristics of local divisions.

Coming to the territorial divisions of the province, I think it is scarcely worth while to show the proportions for each condition and each age period for every taluk; the time occupied in the calculation would be great and the examination of the result would be wearisome to the reader; but I give the most important features in statement No. 42, which shows for each taluk the proportion under each age period up to from 20 to 24 years of those who have married, not distinguishing those who have become widowed. The statement exhibits some marked variations

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

between the different localities. In the Wun taluk very early marriages are more common than elsewhere, 8 per cent of the girls under 5 years of age having been married. Mangrul comes next with 5 per cent, and Basim, Khamgaon, Mehkar, Balapur, Pusad, and Chikhli have all a high proportion. Morsi has a high proportion among boys and above the average also for girls. In the next period Khamgaon, Balapur, Jalgaon, Wun, and Malkapur are the most prominent among females, and Wun, Basim, Khamgaon, Mangrul, Mehkar, and Balapur among males. In Khamgaon as many as 55·50 per cent of the females between 5 and 9 have been married and in Wun 15·91 per cent of the males, a very markedly high proportion. In the next period from 10 to 14 Malkapur comes first among the females with 90·49 per cent, and Wun is again first among the males with 51·39 per cent. In the next two periods the numbers begin to close up, especially for the females, and there is not so much variation. Khamgaon, Jalgaon, Malkapur, and Wun have the most prominent figures. Amongst the females between 20 and 24 the proportion exceeds 99 per cent in no less than five taluks, Jalgaon, Wun, Daryapur, Chikhli, and Khamgaon. Altogether taking both sexes the highest proportions are shown in Wun, Khamgaon, Jalgaon, and Malkapur, and the lowest proportions (always excepting Melghat) in Yeotmal, Amraoti, Ellichpur, Kelapur, Morsi, Darwha, and Chandur. It will be seen here how the customs in respect of the marriage age run by locality; excepting Wun, which stands by itself in marked contrast to the rest of the district of that name and to the greater part of the province, the ages for marriage are earliest in the western and latest in the eastern taluks. In the Melghat the circumstances are entirely distinct. Males do not marry in any numbers before the sixteenth year, and at about the twenty-third year only one man in two is married. Very few girls are married before the eleventh year, and the majority do not marry until after the sixteenth.

Statement No. 43.

Showing the percentage of those who have been married to total of sex at each age-period.

	Males.					Females.				
	0—4.	5—9.	10—14.	15—19.	20—24.	0—4.	5—9.	10—14.	15—19.	20—24.

Among religious communities.

Statement No. 43 gives similar information to the last for the main religions. The Animistic have the highest proportion of married males under five years of age, but with this exception the Hindus marry much earlier than the rest. Among females above 10 years of age, the proportion of the Jains and Hindus are much the same, the Jains attaining the very high rate of 99·76 per cent in the period from 20 to 24. The Hindu proportion is obtained from a very much larger range of numbers, but the actual figures for the Jains are remarkable; out of 822 females of ages from 20 to 24, only two are unmarried. The Animistic males appear to marry about five years later than the Hindu, and among the Mahomedan males there is not much early marriage comparatively, and even in the period from 20 to 24 years of age less than half the men have been married. Among females the Mahomedan and Animistic proportions do not greatly differ, and the large majority of marriages would seem to take place after the sixteenth year.

The next aspect from which the marriage statistics may be viewed is that of the comparison of the sexes. Taking the whole population there are to each thousand males in each condition respectively, 647 spinsters, 973 wives, and 2,619 widows. In the adjoining Statement No. 44 are given the proportions for each taluk, and in Statement No. 45 the proportions for each religion. The small proportion of unmarried females and the large proportion of widows we have been prepared to expect from what has gone before, but the excess of husbands to wives is certainly remarkable. The reverse might well have been looked for, as married men will leave their homes and their wives for purposes of trade or labour, while wives very rarely go without their husbands. The situation is to be partially accounted for by the influx of married men from other provinces, which is not counteracted by the emigration from Berar, but it is improbable that this cause is alone sufficient to explain the whole difference, and having regard to the irregular proportions of the sexes in the total population, I think it may be accepted that some of the married women have escaped enumeration. In two taluks only—Malkapur and Wun—do the wives outnumber the husbands; in Balapur the numbers are almost equal, and in Mehkar and Chikhli the excess of husbands is not very large. The low proportion of wives in Amraoti, Khamgaon, and Akola, is no doubt largely attributable to trade and the consequent influx of married men, but it is not so apparent why the lowest proportion of all should be in Murtazapur, which is not so important a trade center. Among the Animistic wives are in excess, which is probably due to some polygamy. Among Mahomedans the husbands largely outnumber the wives, and as these are the people who are said to be most prone to throw obstacles in the way of any disclosures affecting their women, the fact tends to confirm the theory of the omission of women in the enumeration. The Jains have a small proportion of wives, but they are not a settled community in Berar, as a whole that is, and numbers of them are no doubt married traders whose homes are beyond the province. The Jains have a very small proportion of spinsters to bachelors, and the Mahomedans a very large proportion of widows to widowers. Musalman widowers largely re-marry, and even old men on the loss of their wives at once take steps to replace them. The Animistic have a comparatively large number of spinsters, and their bachelors should have no trouble in suiting themselves. A glance down the first column of Statement No. 44 will show the nature of the competition for wives in the different localities. In Khamgaon it must be particularly keen, and in Jalgaon, Daryapur, Akola, and Akot, the supply of spinsters to bachelors is comparatively small. Excepting the Melghat, the most favourable taluks are those

of the Wun district and Pusad. The widowers seem to take advantage of these circumstances to re-marry, judging by the high proportion of widows to widowers in some of these taluks.

Relative conditions of the sexes at different ages.

I now proceed to examine the proportions of the sexes at the different ages in each condition which are shown in Statement No. 46.

Statement No. 46.

Showing number of females to 100 males in each age-period for each condition.

	0—4	5—9	10—14	15—19	20—24	25—29	30—34	35—39	40—44	45—49	50—54	55—59	60
Unmarried .	105	70	27	11	9	11	14	17	20	16	17	15	21
Married .	355	610	192	157	145	100	87	69	63	47	40	33	20
Widowed .	216	302	178	156	162	152	185	198	271	261	328	257	315

This statement illustrates much of what has been already said, but in another form; how the unmarried males outnumber the unmarried females, how the young wives outnumber the young husbands, how towards the 28th year or thereabouts the number of husbands and wives is equalised, how thereafter the balance is turned, and in each succeeding period the excess of husbands over wives increases, and how at all periods of life the widows outnumber the widowers. But it brings into striking prominence the extraordinary paucity of spinsters in proportion to bachelors at all ages except in infancy and early childhood, and suggests the difficulty attendant on the search of a wife of any but tender years. What this difficulty may actually and practically amount to is shown in the following imaginary statement by a Hindu, resident in a village with a population of 1,000 persons of the same community:—

"Yes, Saheb, my wife is dead and I wish to marry again, but I do not want a child-wife. I have my work to do, and I want a wife old enough to look after my house and my children, but it is difficult. A large village? It is true there are a thousand inhabitants, but of these, 515 are males and only 485 are females. Of the females 287 are married, 78 are widows, and 120 are unmarried. Of the unmarried females, 111 are under 10 years of age and 7 are between the ages of 10 and 14. I wish to marry a girl of from 15 to 20 years of age, or so, but there is only one such in the village unmarried, and for her there are many competitors. Of the men of the village, 295 are married, 30 are widowers, of whom I am one, and 190 are unmarried. Of the widowers, there are 20 over 19 and under 60 years of age—19 besides myself; and of unmarried men between the same ages there are 14. All these men wish to marry and want a wife who is not a child, so that for the one girl of suitable age in our village I have to compete with 33 other men; 33 of us must therefore look elsewhere. If we stretch a point and marry the girls between the ages of 10 and 14, 26 of us will still remain unprovided for and must therefore marry children under 10 years of age, or remain single. Even if the widows might remarry, it would not make much difference to us. There are only 5 widows above 14 and under 30 years of age and only 1 between 10 and 14. It is true that there are 10 widows between 30 and 40 years of age, but they are too old to please most of us, and even if we married all these there would still remain 10 of us—10 out of the original 34 unmarried. So you see, as there is the same competition on the average in every other Hindu village, more than two-thirds of the men must marry children if they do not marry widows, and even if there were no restriction on the remarriage of widows, still more than one-third must marry children if they marry at all."

Local differences.

To examine the bearing on this subject of the circumstances of different localities reference may be made to Statement No. 47, which gives for

Relative conditions among certain castes.

The last point to be considered is the relative conditions of the different castes, the details of the most important of which, in point of numbers, are given in Table E, page 438.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00

The proportions of those who have married, including therein the widowed, are given in Statement No 48. The proportions of widows to total females are shown in Statement No. 49. It will be seen that the Malis marry more and earlier than any other caste. Next to the Malis, the Sutars among males, and the Telis and Kunbis in both sexes are conspicuous for the high proportion of married persons. The Wanjaris marry early, and so do the Dhangars, Kunbis, and Telis; the Chambhars and Malis are also conspicuous for early marriage among males, and the Jain Simpis among females. The difference between the conditions of the Wanjaris and Banjaris is somewhat remarkable; the two castes are said to be of the same stock, but the Wanjaris have settled down to a quiet life of domestication, while their brethren retain their old nomadic habits; and while a large proportion of the former marry, of the latter less than half the men and only a little more than half the women do so. Of the Simpis and Wanis the Jain castes in the female sex marry more and earlier than the Hindu; of the two divisions of the Gonds and the Pardhans the Hindu has a larger proportion of married in both sexes than the Animistic. In the Mahomedan tribes, Shekh and Pathan, the proportion of married is far below the average, and early marriage is comparatively uncommon. The Korkus are distinguished by the smallest proportion of married women, and especially of young married women, child-marriage in either sex being apparently quite exceptional. It is perhaps chiefly on this account that the Korkus exhibit the smallest proportion of widows, a ratio which, for an Indian community, appears to be remarkably low. The Brahmans, Rajputs, and Wanis, on the other hand, have a very high proportion of widows. Of the Brahmans the number of widows is only just less than half that of wives, and exceeds that of unmarried females. A state of society in which the widows out-number the spinsters and yet are prohibited from remarriage, presents conditions which are quite beyond the conception of the European mind; the imagination can scarcely picture the existence of such circumstances in the Western world or realise the social and moral consequences that would ensue were they to arise. The Brahman widows number 7,575; of these 15 are under 10 years of age, 93 are under 15, and 2,257 are under 40 years of age; that is to say nearly one-third are possible mothers, and probably one-fourth would marry again if they were permitted to do so. The effects of the prohibition of remarriage generally are clearly seen in the statement of the proportion of widows (No. 49). The order in which the castes appear might almost be taken as the order of social precedence. The higher castes who follow the Brahmans in the prohibition of remarriage have a large proportion of widows and come at the top, and the low castes and aboriginal tribes who repudiate the doctrine have a small proportion of widows, and come at the bottom. The number of widows is of course also affected by the relative ages of husbands and wives. Amongst the Pathans there are 52 wives to 10 husbands under 15 years of age; amongst the Brahmans and Rajputs there are 51; amongst the Shekhs 49. A high proportion of young wives points to considerable discrepancy of age between the married, and consequently to a tendency to greater widowhood, and to this cause is probably due the high proportion of widows in

the Musalman tribes and in the low caste of Kalals who do not prohibit widow remarriage, but who have 42 young wives to 10 young husbands.

The postponement of the age of marriage among females, and the removal of the restriction against the remarriage of widows, are two most pressing questions in the Hindu social economy of the day, and are receiving some attention from the enlightened members of the community. The circumstances brought to light by the marriage statistics show what immense difficulties there are in the way of the first, and what assistance towards it the second would afford. Where almost every man is desirous of marrying no one will be willing to prejudice the fulfilment of his hopes by deferring the opportunity, and in a population in which, practically, the only marriageable females are girls of tender age, it is apparent that, unless heroic measures are adopted, no improvement can be looked for within any reasonable period of time; but were the widows permitted to remarry, although the numbers who may be regarded as of a marriageable age are comparatively small, there are enough of them in early womanhood to give very sensible relief to the congestion in the marriage market.

CHAPTER VI.

INFIRMITIES.

TABLES XII to XVA (pages 178 to 203) give the numbers of the population enumerated respectively as Insane, Deaf-mute, Blind, and Leper. No definition of insanity was attempted, nor was any distinction made between lunatics and idiots. The entry of deaf-mutes was to be confined to those born deaf and dumb, of the blind to those entirely blind, and of lepers to those suffering from corrosive leprosy, no record being made of those affected with mere discoloration of the skin only. With what degree of accuracy the instructions were carried out can only be a matter of surmise; the diagnosis in each case rested with the parents or friends of the afflicted person or with the enumerator, all equally unskilled, and in the absence of any scientific opinion, it is very probable that some mistakes were made. With regard to the blind and deaf-mutes there was not much room for doubt, but in the case of persons in whom leprosy was beginning to develop, there would be some question; and as to the insane, those at least who are lunatic at intervals only and monomaniacs of a harmless character would probably be omitted, and a more careful enquiry than was possible to the enumerator is necessary to obtain an accurate return. I have heard also that the enumerator sometimes complicated matters, but narrowed the enquiry, by extending the words "from birth," which qualified the deaf-mutes to the insane and the leprous, but how far this may be true I cannot say. Again, in the abstraction of the schedule entries there is considerable room for error, as there is no possible check on the work, except that of repeated abstraction, which, unfortunately, often leads only to different results on each occasion or by each manipulator. Complete reliance cannot, therefore, be placed on the results produced, but there is no normal standard that I am aware of by which they can be tested.

General considerations.

Actual numbers.

The actual numbers returned for each infirmity are as follows:—

	Males.	Females.
Insane	280	198
Deaf-mutes	317	213
Blind	3,380	3,388
Lepers	2,886	812
TOTAL AFFLICTED	6,863	4,611

Comparison with 1881.

The numbers returned at the census of 1881 were—

	Males.	Females.
Insane	499	333
Deaf-mutes	1,412	1,044
Blind	4,563	5,198
Lepers	2,971	777
TOTAL AFFLICTED	9,475	7,352

The proportional figures are compared in the following abstract:—
In 100,000 persons of each sex there were—

	In 1881.		In 1891.	
	Males.	Females.	Males.	Females.
Insane	36	26	19	14
Deaf-mutes	104	81	1	15
Blind	330	402	226	241
Lepers	215	60	193	58

The numbers of the lepers at the two years are the only figures that approximate. Whether the differences are due to over-statement in 1881 or to under-statement in 1891, or to an actual decrease of infirmities, cannot be positively asserted; possibly all three causes have combined to affect the results. With regard to the deaf-mutes, however, it is remarked in the Census Report for 1881 that the numbers then recorded included cases which were not congenital, and pains were taken on this occasion to avoid this mistake, so that the variation now shown does not of itself throw doubt upon the present returns. It would be interesting if the statistics collected in the Medical Department could be used to throw any light upon the question; but the Sanitary Commisssioner, to whom the tables have been referred, was unfortunately not in a position to examine them from a professional standpoint.

Statement No. 50.

Showing number of persons afflicted in 10,000 of each sex.

Comparison with other countries.

Statement No. 50 compares the figures for Berar with those for India in 1881 and for Ceylon and some countries in Europe. The figures for the insane in Berar are remarkably small; those for India are small in comparison with the European figures, and those for Berar are less than half those for India. The proportion of deaf-mutes is almost identical with that in Ceylon and Scotland, but is considerably less than in India generally and in the other countries given. The numbers of the blind are almost the same as those for India in 1881, and approximate to those in Ceylon, but are much higher than those for the European countries, which, as was pointed out in the Census Report for 1881, is what might be expected; heat, glare, dust, insects, and the pungent smoke of cowdung fuel are among other influences affecting the eyes and sight to which the natives of this country are constantly subject, and in a walk through an ordinary village so many children with sore eyes may be seen that, considering what small opportunity the people enjoy of efficient medical care and attention, it need not be a matter of surprise that there should be so many who are blind. The proportion of lepers in Berar compared with India generally is very high. In 1881 it was more than double that of any other province in India, except Bengal, which it still exceeded very largely, and the present returns, so far as the comparison is to be relied upon, show but a small improvement. The subject of leprosy has, however, lately been engaging the attention of a special commission of experts, and the circumstances of this province have no doubt received their consideration, so that there will be no advantage in attempting to discuss the topic here.

Distribution by age.

The next statements deal with the infirmities in relation to age. Statement No. 51 shows the distribution of the infirm by age, that is to say the proportion of the total infirm of each sex who are found at each period. Statement No. 52 gives the ratio of the infirm of each age period to the total population of each sex of the same age. Among the insane under 15 years of age, the proportion of girls is greater than boys; from 15 to 34 the proportion of males is much higher; and from 45 years upwards the females predominate. In a hundred insane males 20 are under 15, 47 between 15 and 34, and 15 of 45 and over; in the same number of insane females 21 are under 15, 39 between 15 and 34, and 23 above 44. The number of insane males rises in each period up to from 30 to 34 and then declines;

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

among the females there is an irregular rise and fall throughout. In 100,000 males between the ages of 30 and 34, 37 are insane, almost double the proportion to the same number of all ages. The largest proportion of insane females is between the ages of 45 and 49, and 55 and 59, the ratio at each age period being more than double the average on all ages. Among the deaf-mutes under 15 years of age also, the proportion of girls is higher than boys, and the proportion of children is much greater than among the insane. From 15 to 34 the males predominate, and from 40 and over, the females. In a hundred deaf-mutes of each sex 28 of the males and 29 of the females are under 15 years of age; and 21 of the males and 25 of the females are over 44. The proportion of those who reach the age of 60 is almost twice as great as among the insane. Among males the numbers rise until the period from 15 to 19, and then decline; among females, as in the case of the insane, the progression of the numbers is irregular. Among the blind there is a general, though irregular, increase in the numbers of both sexes from infancy to old age; from 40 years they begin to increase rapidly, and a very large proportion are 60 and over. Among the young blind the males predominate; in one thousand blind persons of each sex 198 males and 137 females are under 15 years of age, and 387 males and 278 females are under 30; on the other hand, while there are 481 males of 40 years or more, there are 589 females, and of these 241 of the males and 314 of the females are 60 or more years of age. In ten thousand children of each sex under 5 years of age there are 10 boys and 7 girls who are blind, and most of these are probably born so; but blindness is principally incident to old age, for not only are a large proportion of the blind over 60 years old, but a considerable number of the persons who attain the age of 60 are blind; of a thousand persons of each sex of that age, 9 men and 12 women are blind, while the average among persons of all ages is 3 men and 4 women. Very few children are lepers; the disease begins apparently to develop after the 10th year, and the numbers increase until the period from 40 to 44. Of a hundred lepers of each sex 5 males and 11 females are under 20 years of age, 55 males and 58 females are between 20 and 44, and 40 males and 31 females are 45 years old or more; and of these latter 12 males and 11 females attain the age of 60. Relatively to the total population, the lepers are in the greatest proportion at the period from 50 to 54 among males, and from 55 to 59 among females; but they diminish considerably in the last period. Comparing the effects of the different infirmities, it is seen that while blindness is little or no obstacle to longevity, but rather an accompaniment, comparatively few of those afflicted with any of the other infirmities attain the age of 60. Lepers begin to die off after 45 or 50; the insane after 35, and the deaf-mutes still earlier, although those of the deaf mutes who survive their youth have a better life than the insane, and more of them reach old age.

Relative proportions of the sexes.

The relative proportions of the sexes at different ages among the different infirmities are given in Statement No. 53. Taking the whole number or all ages there are to a thousand males 707 females among the insane, 598 among deaf-mutes, 1,002 among the blind, and 281 among lepers. Leprosy, it is seen, attacks nearly four males for every female, and there is considerable disparity between the sexes among the insane and the deaf-mutes. If we accept the results as fairly accurate, the causes which tend to produce them form an interesting subject of enquiry, but one which requires scientific treatment and which I therefore refrain from approaching. The proportions of the sexes at the different age-periods exhibit great diversity, and permit of few general deductions. Among the blind the males predominate until about the 35th year, and after that the females are in excess to the close of life. Among lepers the disparity between the sexes is least among the young and then increases almost uniformly until the period from 50 to 54 years of age, after which it diminishes again to a small extent.

Local conditions.

I now proceed to examine the subject in relation to the local divisions of the province. Statement No. 54 gives the percentage of the infirm on the total population of each sex for each district and taluk. Of insane males the Ellichpur, Melghat, and Jalgaon taluks have the largest proportions, and Melghat, Amraoti, and Mangrul of the females. Kelapur, Wun, and Mangrul have the smallest proportions among males and Mehkar, Wun, and Chikhli among females. Taking the sexes together, the proportion is highest in Melghat with ·029 per cent, Ellichpur with ·025, and Amraoti with ·021, and lowest in Wun and Mehkar with ·009, and Kelapur with ·010. The actual numbers are, however, in no case very large; Ellichpur heads the males with 24, and Amraoti the females with 20. In Kelapur there are only three insane males, and in Wun four of each sex. Taking the districts the proportions for both sexes range from ·013 per cent in Wun to ·023

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

in Ellichpur. In actual numbers Akola heads the list with 107 insane and Amraoti comes next with 102. Wun has only 60.

Statement No. 54.

Showing percentages of the infirm on the total population for each sex.

Pusad	·022	·016	·029	·004	·202	·199	·065	·010	·319	·230

Of deaf-mutes Daryapur has a very much larger proportion than any other taluk, and almost twice as many as Khamgaon, which comes next; Akot has the same proportion among males as Khamgaon, and among females Murtazapur has a higher percentage; but taking the sexes together, while Daryapur has ·055 per cent Khamgaon has only ·029, and Akot and Murtazapur ·026. In Mehkar and Chikhli in both sexes, and in Kelapur and Pusad among females, the proportions are the smallest. In actual numbers Mehkar has only 1 male and 4 females, Chikhli 3 males and 7 females, Pusad, Kelapur, and Melghat 3 females each, and Jaigaon 4 females. In Pusad, however, there are 21 males, and the disparity between the sexes is remarkable. Of the districts, Ellichpur has the largest proportion, ·031 per cent for both sexes, and Buldana the least, ·011. In actual numbers Amraoti and Akola have 124 each, and Buldana only 51.

Of the blind the highest proportions are in Daryapur, Ellichpur, Malkapur, Chikhli, and Jalgaon, among males, and in Basim, Jalgaon, Chikhli, and Khamgaon, among females. In Kelapur the proportions in both sexes are considerably smaller than anywhere else; Wun and Mangrul have the next lowest among males, and Amraoti and Pusad among females. Taking the proportions for both sexes combined, Jalgaon with ·289 per cent, Chikhli and Basim with ·288, and Daryapur with ·286 form a distinct group at the head of the taluks, the next highest proportion being ·268 in Malkapur, and after that ·256 in Khamgaon. In Kelapur the proportion is ·127, and the next lowest are Mangrul with ·188, Wun with ·191, and Yeotmal with ·192. Taking the districts, Buldana with ·268 has the highest proportion, and Wun with ·183 the lowest. The proportion

of males varies from ·266 in Ellichpur to ·167 in Wun, and that of females from ·280 in Buldana to ·200 in Wun.

For leprosy Malkapur takes a markedly prominent place in the taluks; in actual numbers there are 385 of both sexes, and in no other taluk are there as many as 300; and the proportion among the males is as high as ·325 per cent. Morsi, Balapur, and Daryapur come next for males, and Balapur again, Jalgaon, and Chikhli for females. For both sexes together Malkapur has a proportion of ·216 per cent, Morsi and Balapur have each ·195, Chikhli, ·183, and Daryapur ·181. The smallest amount of leprosy is found in Pusad, Basim, Kelapur, Wun, and Mangrul, the proportional figures for both sexes being Pusad ·038 per cent, Basim ·042, Kelapur ·052, Wun ·057, and Mangrul ·059. Of the districts, Ellichpur has the percentage of ·166 for both sexes, Buldana ·162, Akola ·158, Amraoti ·142, and then there comes a drop to ·79 in Wun and ·44 in Basim. In the Basim district the comparative freedom from leprosy is remarkable: there are there 176 lepers altogether, less than one-twentieth of the number in the province, and of female lepers there are only 30.

From this summary, it may be seen that Daryapur, Malkapur, Balapur, and Jalgaon, with, perhaps, Ellichpur and Morsi, are the most conspicuons taluks for the prevalence of infirmities generally, while Kelapur, Wun, Pusad, and Mangrul enjoy the greatest exemption; but beyond these distinctions there seems to be no particular relation in the extent of prevalence between the different infirmities, and no special topographical characteristics of distribution. If we take the districts and note them in order of prevalence for both sexes together, and for each sex separately for each infirmity, and total the serial numbers of all the lists, we shall arrive at a resultant order of prevalence as follows: Ellichpur, Akola, Buldana, Amraoti, Basim, Wun,—from which the very general deduction may be drawn that the south and east is freer from infirmity than the north and west. To some extent there is some relation between the prevalence of infirmities and the density of the population, Ellichpur, Daryapur, Khamgaon, Jalgaon, and Akot being conspicuous among the taluks for both high densities of population and large prevalence of infirmities, and, on the other hand, Kelapur, Wun, Mangrul, Darwha, Yeotmal, and Pusad are amongst those with the lowest densities and the smallest proportions of the infirm; but the correspondence is not sufficiently universal to warrant a precise rule. The topographical prevalence of blindness and leprosy is illustrated in map No. 4. Those taluks in which these infirmities are most conspicuous are coloured pink and blue, respectively, and the ratio of the number afflicted to 100,000 persons is given for each.

Relative proportions among castes.

The last point to be dealt with is the relation of the infirmities to the different castes.

The principal proportions are given in the next four statements Nos. 55 to 58; but before examining them I have to point out that the figures in the tables for the tribe of Musalman are untrustworthy. Most Mahomedans have given specific tribal names, and for a small number only does "Musalman" appear as the tribal or caste designation, and the proportions to this small number of the numbers entered in the tables of infirmities by caste are so very much larger than any other section of the population, that it seems clear that they are erroneous, especially as a very simple explanation of the mistake offers itself. The probability is that the abstractors of the infirmity details have in some instances confused the column for religion in the schedule with that for caste, and have recorded some entries of infirmities under the designation of "Musalman" instead of under that of Shekh, Syed, or other specific tribal name. I have not unfortunately discovered the mistake in time to rectify it. There was nothing in the actual numbers to attract attention at the time of abstraction or compilation, and the error has only come to light on analysing the tables at a time when the Abstrac-

Glancing at the tables, the numbers of the infirm among the Kunbis, Mahars, and Malis at once catch the eye, but these are the most common castes in the province and the proportions of the infirm among them are not remarkable. Of the insane, the highest proportions are among Sonars, Bhois, and Gaolis, for the males, and among the Korkus and Rajputs for the females. Chambhars, Sutars, and Andhs among males, and Rajputs, Dhangars, and Andhs among females, have the highest proportions of deaf-mutes. Of the blind, the Gosawis have the high ratio of ·435 among males, and ·304 among females; the Kasars and Baris have also high proportions among males and Wanjaris, Dhangars, and Koshtis among females. The Gosawis have also a very high proportion of lepers of both sexes; the proportions among the Guraos and Malis for both sexes among the Baris, Kasars, Salis, and Vidurs for males, and among the Warthis, Telis, and Bhois for females, are the most conspicuous of the rest; but it is to be noted that in nearly all the castes included in the statements the proportions in one sex or the other are above the average for the province.

CHAPTER VII.

EDUCATION.

TABLE IX shows the distribution of the population, as a whole and for each religion, under the three categories of learning, literate, and illiterate. The first comprises the number of those who, at the time of the census, were under instruction of some sort either at home or at school; the second, those who were able to read and write and were no longer under instruction; and the third, those unable both to read and write. Table D gives the same information for each caste, tribe, or race with the addition of the numbers of the "literate" who have some knowledge of English. No attempt has been made to show the degree of education of the "learning" and "literate," and such details scarcely fall within the scope of a general census; but the tables afford a clear indication of the attitude of the people and of their separate sections towards education generally.

Proportions.

In 10,000 males of the general popualtion there are 258 under instruction, 584 who have been under instruction, and 9,158 absolutely illiterate. Of the same number of females, the proportions are 7 pupils, 12 instructed, and 9,981 illiterate. Nothing marks the social distinction between the sexes better than these figures.

Illiteracy of Berar.

The returns for the census of 1881 showed that Berar was then one of the most illiterate provinces of India; and although the present enumeration points to some improvement, considerable further progress will be necessary before even the average for all India is attained.

Comparison with other countries.

The marginal Statement No. 59 compares the proportions of the illiterate of both sexes in Berar with those for India in 1881 and some other countries. It will be at once apparent from these figures how vastly the European standard differs from that of this country. Even in Ceylon the condition of education is far in advance of that of Berar and of India generally. In 1881 the proportions for Berar were 938 for males and 999 for females, so that there has been a substantial diminution of illiteracy in the decade amongst the males. As to the females it can at least be said that they have made a beginning. Now one man in 12 and one woman in 521 know or are learning how to read and write.

Statement No. 59.

Showing number of illiterate in 1,000 persons of each sex.

	Males.	Females.

Hungary	592	717
Portugal	750	892
Ceylon	731	971

Under-statement of those "learning."

Before going further, I have to draw attention to an error which the returns of the Education Department bring to light. It is stated in the Administration Report that on the 31st March 1891 there were 48,578 male and 1,764 female scholars in all the recognised schools of all classes in the province, whereas the numbers returned at the census as "learning" were 38,502 males and 976 females. The latter figures are palpably wrong, as, with the exception of the comparatively few new pupils who may have joined the schools between the 26th February and the 31st March, all those at least who were on the books of the Education Depart-

All use subject to https://about.jstor.org/terms

ment as scholars should have been shown at the census as "learning," the numbers of which might be expected to include also some who were under instruction at home or in small schools not within the cognizance of the department. The explanation of the discrepancy probably is that a large number of pupils were returned as "literate" owing to miscomprehension of the instructions by parents or enumerators. To a man who can just read and write while his son at school is very much farther advanced, a by-no-means uncommon coincidence, it does not seem clearly intelligible why he should return himself as "instructed" and his son as only "learning." Doubts upon this point were sometimes expressed by the enumeration staff, and judging by the result, I am inclined to think that they were very commonly entertained. On the other hand, the distinction between "learning" and "illiterate" is clearly defined; the literal meaning of the vernacular expressions used is "is learning" and "not taught," and there does not appear to be much room for doubt between them. Thus while it appears that the numbers of the learning are largely understated and little value can be attached to any deductions drawn from their numbers alone, I think there is no reason to question the approximate accuracy of the numbers of "learning" and "literate" combined, and consequently of the "illiterate," and that the proportions and comparisons deduced from these figures may be safely accepted. I, however, give the separate proportions in some cases for what they may be worth.

Proportions according to religion.

The adjoining statement No. 60 shows the distribution of the population according to religion in all three categories. It will be seen that the Animistic tribes are supremely illiterate; out of 10,000 males only 19 ever have learnt or are learning to read and write, and of the women, numbering, it should be remembered, more than 68,000, there is not a single individual who has received any instruction at all. Of the Hindus 823 in 10,000 males have received some education, but only 13 in the same number of females. The Mahomedans show a better condition than the Hindus, 1,158 males and 56 females in 10,000 of each sex being included among the learning or the literate. The Jains are very much more advanced as regards the males, and show a smaller proportion of illiteracy than several countries of Europe, but the condition of the females is the same as that among the Mahomedans, and exhibits a remarkable contrast with that of the other sex. Among the Jains almost every other man has received some education; among the Mahomedans one man in 9; among the Hindus one man in 12; and among the Animistic one in 538. Of the women there is one in 178 among Jains; one in 179 among Mahomedans; and one in 744 among Hindus. The Christians and Parsis exhibit a very high percentage of instruction, but their populations are not properly typical; the proportions among Christians are largely influenced by the numbers of the Europeans and true Eurasians who, with the exception of young children, are practically all educated, and the numbers of the Parsis are not representative of all classes and ages of that community. Of the natives of the country, however, the Christians are less illiterate than the rest, and they do not neglect the education of the female sex. In 100 Native Christians of each sex only 41 of the males and 67 of the females are illiterate. Of a similar number of Eurasians there are 23 illiterate males and 25 females.

Statement No. 60.

Showing percentage of each condition on total of sex for each religion.

Religion.	Learning.		Literate.		Illiterate.	
	Males.	Females.	Males.	Females.	Males.	Females.

Proportions in school-going age.

The attitude of the people as regards education may, however, be more accurately appreciated by a consideration of the proportions in what may be termed the school-going age, 5 to 14. The tables show the actual numbers from 0 to 14, but it may be assumed that a very small number of the learning and certainly none of the literate are under 5 years of age, and therefore if we deduct the numbers of those under 5 from the total and from the number of illiterate, we get a fair approximation of the proportion of those of school-going age who are either learning or have been taught to read and write. The next statement, No. 61, shows the percentages for the whole population and each religion in the three age periods 5—14, 15—24, and 25 and over. From this we see that in 100 Hindu boys who might be or have been at school, there are only 10 who have fulfilled that condition, of the Mahomedans there are 16, of the Jains there are 50, of the Christians 83, and of the Parsis 80. Of the Animistic there are only 3 in 1,000 boys. Of the girls there are among Hindus only 26 in 10,000, while Mahomedans have 115, and Jains 163. Of the Christians there are 72 girls in 100, and of the Parsis 83. Put in other words the meaning of these figures as regards Hindu girls is this, that in a number of villages aggregating a total population of between 8,000 and 9,000 souls, of whom 1,000 are girls of school-going age, two or perhaps three of these individuals are or have been at school. It is, however, to be noted that in the province there are 28 Hindu women between the ages of 15 and 24, and 25 of 25 years or more, who are stated to be still under instruction. The statement also shows that among all classes, excepting of course the Animistic females, the proportion of illiterate is higher in the last period than in the first two, which indicates the increased spread of education in the rising generation, and a comparison of the figures affords some measure of the rate of progress in the different communities. Among Mahomedans education is spreading more rapidly than among Hindus, and among the Jains faster than in any other class of natives.

Statement No. 61.

Showing the percentage of educated at each age-period.

Local conditions.

I now proceed to examine the conditions in the different local divisions of the province. The proportions of the learning, literate, and illiterate in each district is given in the

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

following statement, No. 62. Wun and Basim are the most illiterate districts and Akola the least. In Akola one male in 9 and one female in 343 can or are learning to read and write; in Amraoti one man in 10 and one woman in 371; in Ellichpur one man in 10 and one woman in 577; in Buldana one man in 12 and one woman in 722; in Basim one man in 17 and one woman in 1,007; and in Wun one man in 19 and one woman in 931.

Statement No. 62.

Showing the percentage in each condition on total of sex in each district.

	Males.			Females.		
	Learning.	Literate.	Illiterate.	Learning.	Literate.	Illiterate.
Amraoti	2·83	6·75	90·42	·08	·19	99·73
Akola	3·51	7·40	89·09	·13	·16	99·71
Ellichpur	3·05	6·67	90·28	·05	·12	99·83
Buldana	2·59	5·59	91·82	·05	·09	99·86
Wun	1·56	3·61	94·83	·04	·07	99·89
Basim	1·65	4·31	94·04	·04	·06	99·90

Taking only the numbers of the school-going age, calculated as before, the proportion of those in 10,000 persons of each sex who can or are learning to read and write is—

in Akola	1,452	67
in Ellichpur	1,238	28
in Amraoti	1,209	44
in Buldana	1,022	24
in Basim	673	17
in Wun	600	19

Coming to the taluks, the proportions in the same category are as follows:—

1. Akot	1,619	65
2. Amraoti	1,587	105
3. Ellichpur	1,525	45
4. Khamgaon	1,483	56
5. Malkapur	1,473	33
6. Akola	1,445	97
7. Daryapur	1,442	21
8. Jalgaon	1,389	32
9. Balapur	1,288	76
10. Chandur	1,130	16
11. Murtazapur	1,024	48
12. Morsi	1,021	7
13. Yeotmal	841	23
14. Chikhli	826	30
15. Basim	712	19
16. Mehkar	710	9
17. Mangrul	699	32
18. Darwha	637	19
19. Pusad	610	7
20. Kelapur	438	6
21. Wun	406	30
22. Melghat	70	5

These figures demonstrate what great differences in the progress of education there are between the several taluks, and also how much room there is for improvement. If in Akot there are 1,619 boys in 10,000 of school-going age who are or have been at school, it follows that there are 8,381 who have not enjoyed that advantage. In other words, for every boy in Akot sent to school there are 5 more who might be but are not; and omitting Melghat, the numbers in the different taluks vary from this to 24 in Wun. In the Melghat 143 boys of school-going age are not taught for one who is. Female education is most advanced in Amraoti and Akola, and, besides Melghat, is very backward in Kelapur, Pusad, Morsi, and Mehkar.

Taking the total number of learning and literate without regard to age, the taluks do not observe quite the same order of strength, as may be seen from

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Statement No. 63, which shows these proportions for each sex and compares them with the conditions existent in 1881. In every taluk there has been a substantial increase in the proportion of the educated of the male sex, notably in Melghat, Chikhli, Mangrul, Khamgaon, and Akola. Among females the increase has been considerable in Amraoti, Akot, Balapur, Darwha, Mangrul, and Wun; but in Chikhli and Mehkar, there has been some diminution, and in Melghat the proportions remain the same. There has been no regularity of variation in the extent of female education, and it appears to bear little or no relation to that among males, except that it is larger in the taluks in which the most important towns are situate. In Amraoti the proportion of females instructed or under instruction is conspicuously higher than elsewhere, but it has no doubt been largely influenced by the presence of Europeans and Eurasians; and the same applies in a lesser degree to most of the taluks in which district head-quarters are situated.

Statement No. 63.

Showing number of persons in 10,000 of each sex instructed or under instruction.

Taluk.	Males.		Females.		Number of persons among whom one is instructed or under instruction.	
	1891.	1881.	1891.	1881.	Males.	Females.
Amraoti	1,291	956	66	18	8	151
Ellichpur	1,240	909	27	14	8	366
Khamgaon	1,149	748	26	21	9	385
Akola	1,145	774	46	23	9	218
Akot	1,129	860	29	5	9	339
Malkapur	1,056	766	16	13	9	631
Jalgaon	1,052	841	13	5	10	763
Daryapur	949	683	10	4	11	971
Balapur	944	660	25	5	11	404
Murtazapur	857	675	20	11	12	503
Chandur	835	569	10	3	12	1,024
Morsi	796	563	9	7	13	1,212
Chikhli	744	461	18	20	13	566
Yeotmal	664	457	13	7	15	752
Basim	644	478	17	5	16	775
Mehkar	615	459	8	9	16	1,293
Darwha	562	428	10	2	18	948
Mangrul	559	356	13	2	18	793
Pusad	556	408	5	1	18	2,183
Kelapur	387	318	6	3	26	1,736
Wun	375	266	14	1	27	734
Melghat	207	122	4	4	48	2,266

Increase of schools.

In connection with the comparison of the educated population at the two enumerations, it may be of interest to note the increase in the number of schools and of scholars during the decade as recorded in the Administration Reports. Without distinguishing between the different classes of schools there were, in March 1882, 884 schools, on the books of which were enrolled 35,422 boys, and in March 1891, 1,235 schools and 48,578 male scholars; in 1882 there were 12 girls' schools with 469 girls, and in 1891, 49 schools with 1,764 female scholars.

To the comparative figures in the last statement are appended two columns showing the number of persons among whom is found one who can read and write or is under instruction, and these figures serve to compare very clearly the extent of education in each taluk. In Amraoti one male in every 8 is literate or learning; in Melghat one male in every 48. The condition of Amraoti considered alone is poor, and that of Melghat is very poor indeed; yet, bad as it is, the latter is three times better than that of the females in the most advanced taluk of the province.

Relative conditions among castes.

Turning now to Table D, we obtain the conditions of education in the different castes and races of which the population is composed. Omitting Europeans, Eurasians, and Native Christians, whose numbers have been examined under the denomination of Christians, and also those whose representatives in this province are few, the groups of castes and races take the order given in the subjoined list, which shows the number in 1,000 males who are learning or know how to read and write:—

1	Group.	5, Priests	629
2	„	9, Writers	503
3	„	14, Traders	488
4	„	21, Brass and copper smiths	256
5	„	17, Goldsmiths	246
6	„	22, Tailors	229
7	„	7, Temple servants	227
8	„	45, Miscellaneous	178
9	„	22*b*, Perfumers	174
10	„	36, Distillers	173
11	„	22*a*, Confectioners	148
12	„	23, Weavers	140
13	„	8, Genealogists	127
14	„	6, Devotees	125
15	„	48, Non-Indian Asiatics	119
16	„	44, Hunters	82
17	„	20, Carpenters, etc.	74
18	„	27, Oil-pressers	66
19	„	2*a*, Cultivators	63
20	„	19, Blacksmiths	53
21	„	18, Barbers	45

30	„	2*b*, Graziers, etc.	17
31	„	37, Butchers	16
32	„	26, Shepherds, etc.	15
33	„	40, Stone-quarriers, etc. 41, Earth-workers, etc.	12
35	„	16, Carriers 38, Leather-workers	10
37	„	38*a*, Village watchmen, etc	9
38	„	46, Acrobats	8
39	„	39, Scavengers 47, Jugglers, etc.	6
41	„	4, Forest and hill tribes	2

The priestly group are pre-eminently first, and then come the writing and the trading castes, whose hereditary avocations demand some knowledge of reading and writing; these three groups exhibit a high proportion of literate and learning. After them there is a distinct drop to some of the groups of skilled artisans, and after these and the temple servants, who are only represented by the Guraos, there is another drop to the perfumers and distillers and others. The forest and hill tribes are at the bottom of the list; they possess only 24 in 10,000 able or learning to read and write. The hunters take a comparatively high place considering the nature of their calling; but in the case of the Bedars, Berads, and Mutrasis, whose numbers raise the proportion of educated,

it is probable that the hereditary occupation has been abandoned. The astrologers might be expected to take a higher place than they do, but the science of their profession is apparently not due to book-lore.

Proceeding from the groups to the individual castes which compose them, we find the Parbhus first with a percentage of 76 males who are literate or learning; the Goanese next with 71 per cent; then the Boharis with 69 per cent, then the Brahmans and Kachhis with 64 per cent, and then the Jain Gujarathis with 63 per cent. With the exception of the Brahmans the actual numbers of all these castes are small; of the large castes the Brahmans are conspicuously the most educated. The position of the least educated is enjoyed by the Nihals and some of the other smaller forest and hill tribes, who are all illiterate. The Kolams have 999 entirely illiterate in every 1,000 males, and in the whole tribe there is only one literate and one under instruction. The Korkus have the

same proportion of illiterate in a 1,000, but they have 9 in 10,000 who are either pupils or literate. The Labhanis are the next worse with 998 illiterate in 1,000 males; and besides the forest tribes of Andhs, Gonds, and Bhils, the Banjaris, Dohors, Mangs, Bhois, Chambhars, Mahars, and Pardhis have all more than 990 per mille illiterate. The proportions among males of the principal castes are given in Statement No. 64. Among females the Parbhus have 16 per cent literate or learning, the Boharis 15 per cent, the Manbhaos 9 per cent, and the Brahmans 2 per cent; among Mahommedans the Syeds have 1 per cent, but in no other caste is the proportion noticeable.

Knowledge of English.

The last feature illustrated in Table D is that of the numbers of the educated population who have some knowledge of the English language. There are altogether in the province 2,493 males and 225 females who are so returned. Nearly all the literate Europeans and Eurasians know English, and it is rather remarkable that the numbers of these are not larger than they are. Some of the Europeans, French and others, may not know English, but it is not easily explicable how it is that among the literate Eurasians there are 27 males and 14 females who are not returned as knowing English; possibly these are so-called half-caste Portuguese, the distinction between whom and the Eurasian proper is not always observed, especially when they describe themselves. The Christian converts, whose education is largely due to the Mission schools, have a fair proportion with a knowledge of English, there being so returned 97 out of 183 literate males and 27 out of 85 literate females. The Parsis also largely cultivate the language, and have 129 who know English out of 195 male literates, or 66 per cent of the latter, and 5 out of 70 literate females. Deducting these four small classes, Europeans, Eurasians, Christian converts, and Parsis, there remain 2,043 males and 5 females who know English, which gives a percentage of ·14 on the total remaining male population, or 14 in 10,000, and of 2·4 on the remaining male literates, or 24 in 1,000 of that class. The Parbhus have 53 out of 164 literates or 32 per cent; the Brahmans 1,219 out of 20,704 or 6 per cent; the Malis 85 out of 2,213 or 4 per cent; the Rajputs 59 out of 3,355 or 18 per mille; the Shekhs 81 out of 4,856 or 17 per mille; the Kunbis 127 out 15,751 or 8 per mille; and the Wanis 59 out of 13,620 or 4 per mille. These are the most conspicuous numbers tabulated; a few other castes have proportions as high or higher than some of these, such as the Kasts, Kayets, Hindu Lads, Boharis, Bedars, Khatris, Pathans, and Syeds, but their actual numbers are small.

Table X, page 164, shows the distribution of the population according to the parent tongue, and the languages and dialects enumerated with the number of persons returning them are shown in a classified form in Statement No. 65.

General considerations.

That a population of less than three millions occupying an area of about $\frac{1}{13}$rd of the extent of the Indian peninsula should enjoy the possession of more than one hundred different languages and dialects is an indication of the wide diversity and Babel-like complexity of constitution of an Indian community. To what extent these dialects really differ, and how far they merit the distinction of separate nomenclature, are questions which must be left to philologists to discuss, but it may be assumed that in a great number of cases the names of places or of castes have been given, in the absence of any clear understanding on the part of the person enumerated or on that of the enumerator, as to what was the proper name of the mother tongue. For instance, among Hindi dialects the names of Ajmeri, Jaipuri, and Jodhpuri, suggest that the persons returning them were natives of those places and gave their mother tongue as the language of Ajmere, and so on, without intending to claim any special distinction. It is to be remembered that a vast majority of the people are ignorant of what their language is or wherein it differs from any other. To the enumerator's enquiry the ordinary reply took some such form as this: "My language is what I speak; how do I know what language it is?" If the enumerator recognised the tongue he would enter it accordingly, but if not, he would consider the caste and the birth-place and arrive at some solution from the general results. However, the names have been tabulated as they were entered, but where they were clearly synonomous, they have been grouped together. Marathi, for instance, which is the general language of the province, appears under a variety of names, which have been shown in the list in brackets, and these, it may be assumed, were intended to indicate one and the same language. Only one of the names used, Madrasi, has been omitted from the list, and the reason for this is that it seems probable that it was used incorrectly. Madrasi is properly, it is understood, a Tamil dialect, but there was reason to believe that the persons who returned it spoke Telugu and not Tamil at all, and so the numbers have been included under the head of Telugu; and as Madrasi would be out of its place in the classification as a Telugu dialect, it has been omitted altogether.

All use subject to https://about.jstor.org/terms

Principal tongues.

Marathi in some form or other, and according to the Gazetteer "with much provincial accent and idiom," is spoken by 2,302,823 persons, or 79·5 per cent of the population of the province. Urdu, more or less corrupt, by 274,102 or 9·5 per cent. Marwari by 36,608, or 1·3 per cent. Other forms of Hindi by 81,961, or 2·8 per cent. Gondi and cognate dialects by 96,118, or 3·3 per cent. Telugu by 43,161, or 1·5 per cent. Korku by 37,126, or 1·3 per cent. Gujarathi by 21,298, or ·7 per cent.

Considering the doubtful character of many of the returns, it may be open to question whether any value is to be attached to a comparison of the numbers shown against the principal languages or groups with those given at the last census, but the variations may be taken for what they are worth. The numbers speaking Marathi have increased by 95,233, or 4·3 per cent. of their former total. The Urdu-speaking have increased by 50,342, or 22·5 per cent. The Marwari by 14,921, or 68·8 per cent. Other Hindi dialects by 21,205, or 34·9 per cent. Gujarati by 5,975, or 38·9 per cent. Gondi by 23,774, or 32·9 per cent. Korku, by 8,445, or 29·4 per cent. Telugu by 3,830, or 9·7 per cent.

Variations since 1881.

Pashtu and Punjabi.

The Pashtu and Punjabi dialects have been returned chiefly by itinerant traders from the north-west frontier. They penetrate to all parts of the province, but they happened to be enumerated in the largest numbers near the railway. Nearly all those speaking Afghani were found in Akola; 128 males and 38 females of those speaking Pashtu were found in Malkapur, but a large number of the latter, 86 males and 64 females, were enumerated in the Pusad taluk. Those speaking Rohili and Punjabi were much scattered, but 24 of the former were found in Kelapur, and 43 of the latter in Akot. The birth-place table shows that 765 men and 26 women were returned as born in Afghanistan, and these would account for most of the dialects included in the Eranic group, the remainder being probably attributable to some of those born in the Punjab. Combining the figures there are 1,142 men and 281 women returned as speaking a Pashtu or Punjabi dialect, and there are 1,460 men and 236 women returned as born in Afghanistan and the Punjab. It is probable that the excess males under the birth-place category gave their mother tongue as Persian or some form of Hindi, and it is possible that the excess females in the language return were born in India; but in the case of the women, as the returns were furnished by the men, it is probable that the birth-place figures would be the more accurate of the two and the mother tongue assumed.

Marwari.

Marwari is the language of traders from Marwar, who have more or less settled in the province, and the increase in the numbers, from 21,687 in 1881 to 36,602 now, affords some measure of the extent of trade development. The numbers exceed those who are returned as born in Central India and Rajputana, but there is no inconsistency in this, as many of them would have been born in Berar, the children of settlers. They are found throughout the province, though the numbers in the Wun and Melghat taluks are very small; they are strongest in Amraoti, Khamgaon, Basim, and Ellichpur, all convenient trade centers.

Hindustani.

Hindustani or Urdu, as it is indifferently termed, is here mainly the language of the Mahomedans, but not sufficiently so to furnish even an approximate index to the amount of the Musalman element. The immigrants from the North-West Provinces and Oudh help to swell the numbers of the Urdu-speaking people; but even including all these, there still remains a considerable excess who are probably to be

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

accounted for amongst the immigrants from the Nizam's Dominions. The language is now the mother tongue of nearly one-tenth of the population, and is moreover, as Sir A. Lyall observed in the Gazetteer,—"understood and even spoken imperfectly throughout the province." Before the assignment to the British it was the official language of the courts, and it seems almost a pity that we have not endeavoured to encourage and improve it. Even corrupt Hindustani would probably go further and be more useful than bad Marathi of purely local appreciation.

Gipsy dialects.

Of the other Hindi dialects the mixed gipsy forms of speech are returned in the largest numbers, Banjari and Labhani, which are more or less akin and spoken by the Banjaras, being shown for 69,161 persons. Of these nearly 19,000 are found in Darwha, and more than 14,000 in Pusad; Mangrul, Basim, and Mehkar also show large numbers.

Bhili.

It has long been known that the Bhils of Berar have lost their tribal language, and although there is an increase in the number now returning it upon that at the last census, it is insignificant in comparison with the number of the tribe. Of those who have retained it the majority are found in the Pusad taluk and the remainder in Chikhli and Mehkar. The rest of the tribe have given Marathi or Urdu.

Gujarathi.

Gujarathi, more or less mixed, is spoken by several castes, but the numbers returning it are chiefly attributable to immigrants from the Western Presidency. In its purest form it is probably found among the Parsis, but their numbers are comparatively very small.

Portuguese.

The Goanese and Portuguese are bastard dialects in which Marathi is probably the principal element, although the persons who speak them are wont to claim a pure European descent. Their numbers are small and are confined chiefly to the towns.

Girwan or Sanskrit.

A Sanyasi or ascetic and an up-country Brahman have given Girwan as their mother tongue, but as this is a dead language the correctness of the return is open to doubt. It is probably an affectation assumed in support of an unworldly character.

Tamil.

The Tamil dialects are returned in small numbers, and are chiefly attributable to immigrants from Southern India; the persons speaking them are mostly found in the towns of Amraoti, Akola, Ellichpur, and Khamgaon.

Telugu.

Of those who speak Telugu, or the kindred Komti, there are 43,161 persons some of whom are found in all parts of the province, but more than half of them are located in the Kelapur and Wun taluks. The increase in the numbers since the last census is not more than that due to natural growth, and there seems to have been no influx of this race as in the case of the rest of those whose language may be regarded as foreign.

Gondi.

Gondi and the Gond dialects are almost confined to the Wun district, the Chandur and Morsi taluks of the Amraoti district, and the Melghat, that is to say, to the hilly country and to that part of the province in which the immigration from the Central Provinces is most conspicuous. Kelapur, a tract of hill and forest, has the largest share in the actual numbers and a very large share in proportion to its population.

Korku.

The Korku language is peculiar to the Melghat, where are found nine-tenths of those who return it as their mother-tongue. It is found, however, much more scattered through

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

the province than in 1881, when only 257 persons speaking it were enumerated outside the Ellichpur district, against 2,106 at the present census. The primitive hill-men are beginning to find their way into the world, and as they do so their language will probably merge into that of the province. Nihali is an instance of a tribal tongue which is disappearing; it is akin to Korku, but is classified as Hindi-mixed Kolarian. In the Gazetteer of 1870 it was remarked that their original tongue might still be lingering among the Nihals, and in 1881 it was returned as the mother-tongue of 774 persons; now only half as many persons claim it; ten years ago 31 per cent of the tribe were included in the number, and now only 17 per cent. are shown.

Nihali.

The Sikh language has been returned by only 14 persons, although there are 316 persons of the Sikh caste or race, of whom 114 profess the Sikh religion. The others have given Punjabi or Urdu.

The returns under the head Nimadi are probably doubtful. It is not characteristic of any caste or tribe, but has been returned for persons of many and various castes in the Melghat taluk.

Regarding the subject of languages from a territorial point of view, the adjoining Statement No. 66 shows the principal languages and dialects returned in the different taluks and the number of persons in every thousand whose parent tongue they are. From this it will be seen that Marathi, including all its dialects, is spoken most in Chikhli, where it is the parent tongue of 875 persons in every thousand, and the other three taluks which form the western border of the province, Jalgaon, Malkapur, and Mehkar, come next; with the exception of the Melghat taluk, it is spoken least in the four taluks of the Wun district, so that, generally speaking, it is more characteristic of the west than of the east of the province. In the Kelapur taluk only every other man speaks Marathi, and in the Melghat it is quite a foreign language and not so widely known as Urdu. The latter is most spoken in Ellichpur and Amraoti, and its strength is probably due to the larger urban population; it is least spoken in Kelapur and Wun. Marwari is strongest in Khamgaon, and Gujarathi in Malkapur. The main distribution of Gondi has been already mentioned. In the Melghat 719 persons in every thousand speak Korku. Kolami is well represented in the Wun district, and Labhani and Banjari throughout the southern taluks of the province.

Local characteristics.

THE subject matter of this chapter has been to a considerable extent anticipated in the consideration of the movement of the population in chapter II. Table XI shows the distribution of the population according to birth-place, and the adjoining statement No. 67 is a summary of this table and classifies the population in six groups: those born in the district where they were enumerated, those born in districts immediately contiguous, which include the border districts of neighbouring provinces, those born in the remaining districts of the province, those born in other parts of India, those born in Asia beyond India, and those born in other continents. Statement No. 68 gives the same information in proportional form.

Birth-place classified.

It will be observed that it is only in the second and third groups that the females exceed the males, while among those born in remote parts, whether of India or elsewhere, the males largely preponderate. In the first group, of the home-born population, there are 1,081 males to 1,000 females. Of those born in remote parts of India, there are 1,284 males to 1,000 females. Of those born in other countries of Asia, there are 205 males to every 10 females. Of those born in other continents there are 17 males to every 10 females. On the other hand, of those born in contiguous districts, there are only 777 males to 1,000 females; and of those in other parts of the province, not contiguous to the district of enumeration, there are 984 males to 1,000 females. The explanation of these differences is, that the men not uncommonly take their wives from adjoining districts, and that the immigrants from a distance either leave their women behind them or settle and marry in the province. The greater the distance the fewer the women, appears to be a rule to which the only exception is in the case of the last group, which consists almost entirely of Europeans. Some actual figures will illustrate this rule very clearly. In the Amraoti taluk, of those who were born in the Ellichpur district, 5,242 are males and 7,474 are females; of those who come from the Central Provinces, 12,165 are males and 11,633 are females; of those from the Bombay Presidency, 2,246 are males and 1,681 are females; of those from Rajputana and Central India, 3,070 are males and 1,497 are females; of those from the North-Western Provinces and Oudh, 3,636 are males and 1,051 are females; of those from the Punjab, 71 are males and 26 are females; of those from Bengal 78 are males and 10 are females; and from Afghanistan, there are 58 males and only 1 female.

Relative proportions of sexes.

Taking the figures for the province, inclusive of the railway passengers, there are born in the—

Foreign element.

Central Provinces	109,495	males and	106,993	females.
Hyderabad territory	53,264	„	57,641	„
Bombay Presidency	31,376	„	28,429	„
Rajputana and Central India	22,169	„	9,907	„
North-West Provinces and Oudh	22,818	„	5,541	„
Punjab	695	„	210	„
Madras Presidency	473	„	350	„
Bengal	343	„	76	„
Afghanistan	777	„	26	„

Hyderabad territory is the only foreign quarter from which the majority of immigrants is female; and if the figures for the purely indigenous population are examined, it is seen that the average preponderance of males in the province has been somewhat raised by the foreign element. Of those born in Berar, there are 1,250,167 males and 1,196,409 females, and the proportion of males to females is 1,045 to 1,000, while for the total population it is 1,061.

Indigenous population.

The total indigenous population is 2,446,576, which is 84·44 per cent of the total population of the province. In 1881 the number born within the province formed 83·69 per cent of the whole. The actual increase of this class amounts to 209,836 and the rate of increase to 9·38 per cent, which is somewhat higher than the rate for the province. This is only another way of viewing the fact that the indigenous population has, as a whole, increased faster than the foreign element.

Preponderance of females in inter-provincial migration.

Of natives of Berar who were enumerated in districts other than that of their birth there are 94,437 males and 127,407 females, or 741 males to 1,000 females, which shows how much more largely the women take part in the inter-provincial movement. This is slightly more marked in the movement between adjoining districts. Of natives of Berar born in districts contiguous to that of their enumeration, there are 90,526 males and 123,377 females, or 734 males to 1,000 females. Of those who have come from contiguous districts beyond the border into the adjoining districts of the province, there are 56,632 males and 65,790 females, and the proportion is 861 males to 1,000 females. So that in the movement between contiguous districts, whether within or without the province, while the female element predominates throughout, it is greater in the inter-provincial migration than in the immigration from outside, from which it may be inferred that while there is considerable intermarriage between contiguous districts, yet in the selection of wives preference is given on the whole to the native women. This may be as much due to the want of facilities of communication across the border for a great part of its length as to the superior charms of the ladies of Berar.

Immigration from contiguous districts.

The numbers contributed by each district of the province to the different taluks have been given in statement No. 11 in Chapter II. The following statement, No. 69, shows the most conspicuous contributions from the contiguous districts of the adjoining provinces:—

Statement No. 69.

Province and District of Birth.		Taluk where enumerated.	Males.	Females.	Total.
Central Provinces	Wardha	Chandur	5,620	6,350	11,970
„	„	Morsi	1,283	1,571	2,854
„	„	Yeotmal	6,587	6,748	13,335
„	„	Kelapur	4,174	4,196	8,370
„	Chanda	Wun	3,916	4,309	8,225
„	Betul	Morsi	2,255	2,282	4,537
„	„	Melghat	1,405	1,269	2,674
Hyderabad territory	Aurangabad	Chikhli	5,408	6,964	12,372
„	„	Mehkar	2,777	3,297	6,074
„	Parbhani	„	1,147	1,424	2,571
„	„	Basim	4,654	6,144	10,798
„	„	Pusad	4,768	5,462	10,230
„	Nander	„	3,576	5,392	8,968
Bombay	Khandesh	Malkapur	4,622	7,589	12,211

The preponderance of females from Khandesh in the Malkapur taluk is very striking. It is to be noted also that the taluks of enumeration shown in this statement are all on the borders of the province. Taking the total contributions from these districts across the border to all parts of Berar, we find that 40,272 come from Wardha, of whom 20,915 are females and 19,357 males; 26,654 come from Parbhani, of whom 14,425 are females and 12,229 males; 25,088 come from Aurangabad, of whom 13,461 are females and 11,627 males; 22,821 come from Khandesh, of whom 12,850 are females and 9,971 males; 10,640 come from Chanda, of whom 5,404 are females and 5,236 males; 10,271 come from Nander, of whom 6,019 are females and 4,252 males; and 9,037 come from Betul, and of these 4,601 are males and 4,436 females. With the exception of

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

the last, the numbers of the females predominate in all. The number of immigrants from these seven districts form 31·4 per cent of the total immigrant population.

Referring to the proportional statement No. 68, we find that of the persons born in the districts in which they were enumerated, the proportion of females is greater that that of males in the Akola district only; that is to say, that relatively to the other sex there are more home-born women in Akola than in any other district. This does not mean that they are more stay-at-home or in lesser demand in the matrimonial market, as in fact Akola contributes more women to the rest of the province than any other district; but it means that fewer women are brought into the district, and this fact with that of Akola having lost largely in the inter-provincial exchange are to some extent mutually explanatory of each other. From the proportional figures for the second group, those born in districts contiguous to that of enumeration, the analogous fact is illustrated that Akola has received comparatively the smallest contribution, especially of the male sex. The third group is unimportant. The fourth group shows that the Buldana district has received the smallest proportional contribution from remote parts of India, that is from all districts not immediately contiguous. All districts show in this group a higher proportion of the male sex, and the disparity is most marked in Akola and Ellichpur, the two districts from which there has been comparatively considerable emigration. Regarding only the actual numbers of the immigrants in Akola and Ellichpur, it might be considered that there was a distinct movement tending to compensate for the loss by emigration; but this would probably be an erroneous conclusion, and it would be safer to infer that where the male element largely predominates in the immigration, the people only come temporarily and not to settle. Groups E and F are comparatively insignificant, but it is somewhat curious that there should be as many as 803 persons from Afghanistan in the province. These are traders from the border lands beyond the Punjab who find their way down every year and generally go away again as the hot weather comes on.

Classes of immigrants.

The immigrants from the Central Provinces, the Nizam's Dominions, and the Bombay Presidency, are for the most part settlers drawn to the province by either trade or agriculture. Those from Rajputana and Central India, and from the North-West Provinces and Oudh, are mostly labourers who come here for the season or take temporary service. Like the up-country traders, they generally go to their homes in the hot weather, when work becomes scarce, but though not settlers they are very regular visitors.

Comparison of immigration and emigration with that of 1881.

In the next two statements, Nos. 70 and 71, are given the details of the principal immigration and emigration for both 1881 and 1891, the chief features in which have been

Bengal	?	?	381	412	?	?

already noticed either in this chapter or in chapter II, but it remains to observe that in the interchange with the Bombay Presidency since 1881 the province has suffered a net loss of 13,245 males and 13,037 females, and in that with the Central Provinces it has acquired a net gain of 15,329 males and 15,811 females. The variation in the relations with Hyderabad territory cannot be ascertained for want of the figures of the emigrants in 1881.

CHAPTER X.

CASTES.

THE distribution of the population according to its component castes, tribes, and races, is shown in table XVI, page 206. In an appendix to this chapter is given an alphabetical index to all the classes detailed in the table, together with a complete list of all the subdivisions of each caste, which have been returned in the enumeration schedules. In the schedule there was a prescribed column for the caste and another for the subdivision, but there was not infrequently some confusion as to the distinction, and the columns were thus sometimes transposed; the spelling, too, and the use of synonyms led to a good deal of variation, and the number of different names for caste and subdivision that were actually recorded was very large indeed. Where, however, the mistakes were obvious the entries were corrected, and the Caste Index, which still contains more than 300 main castes and more than 3,000 subdivisions of castes, represents the result. This list might no doubt be considerably revised, but that is a matter for separate consideration. It may, perhaps, be doubted whether the advantage of an enquiry into all the existing castes and sub-castes is commensurate with the expenditure of time and labour it entails. The subject is full of complications and of seemingly unlimited range. A large proportion of the people have very indefinite ideas as to the nomenclature of their caste, and comparatively few possess fixed notions as to the subdivision to which they belong. It is open to any one to manufacture an appellation to his own liking, and the names of places and of occupations are in this way largely introduced. At the same time the social distinctions, customs and habits which characterise each caste and subdivision tend to vary and increase with each new formation, so that to ascertain the peculiarities of each would involve a very elaborate investigation and at the same time would lead to no finality. At the last census a very full enquiry was made with respect to the principal castes, and nothing further in this direction has been now attempted; the changes that have since taken place and the local distribution of the different castes and tribes are alone dealt with here, and, as in the case of the religions, reference should be made to Mr. Kitts' interesting report for 1881 for details of their characteristic features. In the table the castes have been classified, under the instructions of the Census Commissioner for India, according to the general hereditary occupation of each and the groups have been arranged "more or less in accordance with the position generally assigned to each in the social scale." Following this arrangement, I shall proceed to take the castes as they come in the order of the table, and treat of those which, from their numerical importance or special characteristics, seem to be worthy of attention.

Introductory.

The first group, the Military and Dominant, calls for no comment: the Sikhs, of whom it is mostly composed, have been already noticed under the head of religion. The next group is that of the "cultivators," of whom the Baris are the first to claim attention. They number 25,920 and have increased by 2,230, or 9·4 per cent, since 1881. They are now, as then, found in much larger numbers in Jalgaon than elsewhere, and in that taluk they comprise more than 5 per cent of the total population; they are also found in considerable numbers in Ellichpur, Morsi, Amraoti, Akot, Daryapur, Chandur, Darwha, and to a lesser extent Pusad. Their speciality is, Mr. Kitts says, to keep *pan* gardens.

Baris.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Gujars.

The Gujars, who come from the Punjab and the North-West Provinces, number 990; there were 967 in 1881, and they have therefore done little more than maintain their position since; nearly three-fourths of them are to be found in Amraoti, Morsi and Akot. In 1881 their numbers were relatively strong in Akola, but they seem to have now deserted that taluk for Akot; in Khamgaon there has been some diminution also, and in Amraoti a large increase. A few in the Balapur taluk have been returned as Jains.

Kapuwars.

The Gurud Kapuwars, the Kapuwaru, and the Reddi Kapuwars are probably the same people and are a Telugu caste who are found in the Kelapur and Wun taluks only, with the exception of a few individuals in Morsi; they number now 592 against 340 in 1881, so that they have increased largely.

Jats.

Jats number 527 and are found chiefly in Mehkar, Amraoti and Murtazapur. In 1881 only 89 persons were returned as of this caste, but 639 were shown as belonging to the Jat subdivision of Rajputs, and judging from the localities affected by them then they appear to be the same people who are now shown as Jats, but no comparison of numbers can be made, as it is not known how many of them may have adhered to the description of Rajput. This is an instance of the confusion of name; whether these people are Jats or Rajputs or Rajput Jats, probably very few of them have any notion.

Kunbis.

The Kunbis, who in point of numbers in all India are second only to the Brahmans, are numerically by far the most important element of the population of this province; but owing to their numerous subdivisions and to some mixed nomenclature, it is somewhat difficult to ascertain their actual numbers or their variation since 1881. All subdivisions develop a tendency to cleavage from the parent stem and to subsequent independent growth, and in this way the Marathe and Munarwars at least, who only appeared as subdivisions in 1881, have now achieved a separate entity. In 1881 the Maratha Kunbis numbered 125,210, and those who have now discarded the Kunbi and described themselves as Marathe only number 19,038, so that it would seem that the latter do not represent more than about one-sixth of the original subdivision. On the other hand, the number of Munarwars now is out of all proportion to the number of the subdivision in 1881; there were then shown to be 206, of whom 199 were in the Kelapur taluk; there now appear to be 2,120, of whom more than half belong to the same taluk and the greater portion of the remainder to the same district. The name of Munarwar is, I believe, unknown outside Berar, so that the increment is not due to immigration, and as it cannot be due to natural growth, it seems that either there was some misdescription in 1881 or that there has been since what may perhaps be called conversion. Both Marathe and Munarwars may probably be properly regarded as Kunbis, but the list of subdivisions returned at this census numbering more than 160 suggests that the caste name has been adopted by people of other castes as a general appellation indicating possibly the possession of land. A Teli Kunbi means probably a Kunbi who follows the occupation of an oil-presser, and a Mhali Kunbi a Kunbi barber, but a Manbhao Kunbi, for instance, seems an absurdity, unless it is taken to mean a Manbhao landholder or cultivator. Those, however, who have returned themselves as Kunbis number 834,432, and if the Marathe and Munarwars are added, the aggregate amounts to 855,590, which is nearly 30 per cent of the total population, and which shows an increase of 21,416, or 2·6 per cent, over the number in 1881. This increment is small, but as it is impossible to say what numbers should be eliminated from the totals recorded for either 1881 or 1891, no

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

accurate comparison of the numbers of the Kunbi proper can be arrived at. Taking only those described under the caste name, they are found in large numbers in every taluk except the Melghat, and bear a proportion to the total population varying from nearly 41 per cent in Chikhli to 18 per cent in Darwha. In Wun they form 39 per cent, in Khamgaon 38 per cent, in Malkapur 37 per cent, in Basim 36 per cent, and in Akot 34 per cent; and generally, with the exception of Wun, the proportions in the western taluks are higher than those in the eastern, which points to their western origin and connection with the Kunbis of Khandesh and the Deccan.

Lodhis.

The Lodhis number 1,920 and have increased by 147, or 8·3 per cent, since 1881. They probably come from the North-West or the Central Provinces, and more than half of them are found in the Ellichpur, Chandur and Amraoti taluks. They used to be comparatively strong in Daryapur, but their numbers there have diminished from 232 to 136. A few of them in Akot have returned their religion as Musalman.

Malis.

The Malis are numerically the third most important caste in Berar, the Mahars ranking second to the Kunbis. The numbers of the Malis are 202,498, which amounts to nearly 7 per cent of the total population. In 1881 they numbered 195,981, and the increase is only a little more than 3 per cent, less than half the rate for the province. They are most numerous in Morsi, Chandur, Ellichpur and Malkapur; in Morsi they form nearly 15 per cent of the population, in Ellichpur 12 per cent, in Chandur 9, and in Malkapur 8 per cent; but they are found in considerable numbers in every taluk except the Melghat, and in Wun the numbers are small in comparison with the rest. They have decreased in several taluks, notably in Akot, where their numbers have fallen from 12,996 to 11,607, or nearly 11 per cent.

Manas.

The Manas come from the Central Provinces, and are found chiefly in Kelapur, Wun and Chandur. They number only 217, but as there were none recorded in Berar in 1881, they are interesting as marking the immigration of a new caste.

Munarwars.

The Munarwars are a Telugu caste from Hyderabad territory who are nearly all found in the Wun district; their numbers have fallen from 3,230 to 2,120, a very large diminution which points to a retrograde movement. In Kelapur their numbers have risen from 743 to 1,175, but in Wun they have fallen from 1,535 to 539, and in Pusad from 808 to 49, which is wholesale desertion. The variation, however, may be entirely attributable to the adoption of the name of Kunbi.

Pahads.

The Pahads are probably the same as the Paharis, who, Mr. Kitts says, are also known as Keotis. They number 836 against 1,164 in 1881, and therefore show a diminution of 28 per cent, which probably means some emigration.

Phanadis.

The Phanadis, who number 102, and who, with the exception of a few individuals in Balapur, are only found in Pusad, are noticeable as a small caste peculiar to this province. At the last census they numbered 117.

Rajputs.

The Rajputs number 50,930 and have increased by 6,797, or more than 15 per cent, since 1881. The list of subdivisions, amounting to nearly 200, suggests, however, that many of those who call themselves Rajputs do not belong to the caste at all. Taking them as returned, they comprise 1·76 per cent of the total population, and are found in all parts of the province, but more than one-third of their number were enumerated in Malkapur, Chikhli and Chandur. Fourteen in the Akola taluk gave their religion as Sikh.

All use subject to https://about.jstor.org/terms

Tirmalis. The Tirmalis, or Tirumalis, who mostly affect Darwha, Chandur and Morsi, have diminished from 494 to 449, the decrease being almost entirely among males. The colony in Murtazapur is new.

Yelamas. The Yelamas are a Telugu caste who are apparently pushing their way up the country from Southern India through Hyderabad territory; they numbered 295 in Berar at the last census and have now added 200 more. They are confined to the Kelapur, Pusad and Wun taluks, the south-eastern corner of the province.

Gaolis. The Gaolis, including the synonymous Ahir, Gahlan, and Gawari, number 37,268 and form 1·29 per cent of the total population; they have increased since 1881 by 7,109, or nearly 24 per cent. They are found in every taluk, but two-thirds of their number were enumerated in the Wun and Amraoti districts, and they are especially numerous in the Yeotmal and Chandur taluks, which suggests that many of them have come in with the immigration from the Central Provinces. The number in the Melghat amounts to 5·7 per cent of the population of that taluk. Naturally a Hindu caste, 771 of them have relapsed into Animism, 815 have become converts to Islam, and 1 has returned himself as Jain.

Golkars. The Golkars, or Golawaru, are a pastoral Telugu caste who are helping to colonise the Kelapur and Wun taluks. They now number 2,454 and have increased by 688, or nearly 39 per cent, since 1881. In Kelapur their numbers have risen from 1,204 to 1,931, but in Wun they have somewhat diminished.

Kanadis. The Kanadis are another pastoral caste, who come presumably from Kanara. At the last census they numbered, all told, 1,963, of whom 1,324 were enumerated in the Bombay Presidency and 639 in Berar. They now number 1,447 in Berar alone, so it would seem that there has been considerable immigration of these people since 1881. They are strongest in Basim and Murtazapur, and there are a fair number in Mangrul, Amraoti and Akot. In 1881 more than half their number were found in Basim, so they may be regarded as having established their head-quarters there and to have pushed out a line of communication to the north-east, with several detached posts. Yeotmal and Darwha, where a good proportion were found in 1881, they now seem to have almost deserted.

We now come to the forest and hill tribes, who constitute numerically an important element of the populution of the province.

Andhs. The Andhs number 43,602 and have increased by 6,592, or nearly 18 per cent, since 1881. They are strongest in Pusad, Darwha, Basim and Mangrul, but are found in considerable numbers also in Mehkar, Yeotmal, Balapur and Akola. In Balapur, however, they have diminished by 309, or more than 11 per cent, since the last census. Very little seems to be known about these people, but they are said to be cultivators and peculiar to Berar and the neighbouring Hyderabad territory. Mr. Kitts refers to them as "completely Hinduised," but a small number, 305 altogether, in the Yeotmal and Pusad taluks still adhere to the primitive form of religion.

Arakhs. The Arakhs seem to be disappearing from Berar. There were 371 in 1881 and only 253 at the present census, of whom the greater number were found in the Morsi and Amraoti taluks.

Bhils. The Hindu and Animistic Bhils classed together number 4,266 and show the slight increase of 83, a little less than 2 per cent, since 1881. The Mahomedan Bhils, on the other

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

hand, have increased from 1,125 to 1,928, or more than 71 per cent. A large proportion of the Hindu Bhils are found in Pusad, and there are considerable numbers in Darwha, Chikhli and Malkapur; the Animistic Bhils were mostly enumerated in Darwha; and the Mahomedans in Jalgaon and Melghat. The Gazetteer of 1870 refers to the Bhils of the western extremity of the Gawilgarh range as all Mahomedans, and quotes the tradition of their chiefs having been—

"all forcibly converted by Aurangzeb, who then entrusted to them the watch and ward of the forts and passes of the Satpuras."

This clan have since spread into the taluks at the foot of the hills, and are probably quite distinct from the Bhils of the Balaghat.

Bopchis.

The Bopchis are sometimes said to be a class of Korkus, and their numbers were presumably included with the Korkus at the last census. On the present occasion 613 were enumerated, who were nearly all in the Morsi taluk.

Gonds.

The Gonds number 80,927 and form 2·79 per cent of the population of the province. A large majority are found in the Wun district, and in Kelapur they are especially numerous and form 20 per cent of the taluk population. In Morsi and Chandur their numbers are also large, and in the Melghat they are not inconsiderable, but they are not so numerous in the latter taluk as might be expected from their history. If the Gazetteer may be accepted as an accurate authority of its time, there have been great changes in the habitat of the Gonds during the last twenty years. They are there described as inhabiting the Melghat and a strip of wild country along the Wardha river. A small proportion only are now found in the Melghat, and those who live near the Wardha occupy much more than a strip of country, and that no longer wild. The religion of the tribe is animistic, but 9,058 persons, or rather more than 11 per cent, have become Hindus; these converts are most conspicuous in the taluks of the plain.

Gorwans.

The Gorwans number 161, of whom 13 are Hindus and the remainder Animistic. With the exception of 6 individuals in Kelapur, they were enumerated in the Melghat taluk, and as there is no mention of them in the records of the last census and I can discover no trace of them outside Berar, I am disposed to think that the name must be a corruption of Gaolán, the aboriginal herdsmen of the Gawilgarh hills.

Kolams.

The Kolams number 17,419, of whom 954 are Hindus. They have increased by 5,256 or 43 per cent since 1881. They were then and now nearly all enumerated in the Wun district, but there is a not inconsiderable number in the Melghat, where none were shown at the last census, and as they are sometimes regarded as a division of the Gond tribe, the Melghat people may have been so described on that occasion. 373 of those enumerated in the Melghat returned their parent-tongue as Korku. The large increase in the Wun district is probably due to immigration from the Central Provinces.

Korkus.

The Korkus number 34,981, of whom 379 are Hindus; their numbers since 1831 have increased by 6,531, or 23 per cent; 31,611 are found in the Melghat taluk, where they form 67 per cent of the population, and where their numbers have increased by 4,830 or 18 per cent. Some of them are, it seems, beginning to make their way into the plains, and there are considerable numbers in Ellichpur, Akot and Jalgaon, and not a few in Morsi, Amraoti, and Chandur; there are now close upon 10 per cent of their number found outside Melghat against only 6 per cent in 1881, and none in 1870 *pace* the Gazetteer, but this increase may very possibly

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

be due not to a descent from the hills of Berar but to immigration from the Central Provinces, where the numbers of the tribe are large. The total increment points with a certainty to some immigration; but whether this movement has been through the hills into Melghat or across the plains from the east, or in both ways, must remain a matter of conjecture.

Koyela Bhute.

The Koyela Bhute is sometimes held to be a Gond clan. In 1881 there were 43 in the Melghat, but these have entirely disappeared, and the tribe or clan is now represented in Berar by only 10 individuals in the Yeotmal taluk.

Lajjhads.

The Lajjhads or Lajars, described in the Gazetteer as "mostly hewers of wood on the fringes of the Satpura hills," have now spread in small numbers over the country, but a large majority are still located in Morsi. They number 1,860, which is an increase of only 36 over their numbers in 1881. They are mostly Hindus.

Marals.

The Marals, numbering 410, are new to Berar. They are firewood sellers who have immigrated from the Central Provinces and were mostly enumerated in Wun.

Moghes.

The Moghes are fast disappearing. In 1881 there were 344 and now there are only 218. They inhabit the Melghat, but one adventurer was found in Amraoti.

Nihals.

The Nihals also have lost some of their number; there are now 2,305 against 2,483 in 1881. They are said to be the "village drudges" of the Korkus or Gonds of the Melghat, but they are gradually leaving the hills, 245 having been enumerated in the plains against 97 in 1881. Their language is fast disappearing, as has been already remarked.

Pardhans.

The Pardhans number 12,936, and have increased by 1,908, or 17 per cent, since 1881. Originally they were a Gond division and they are described as the hereditary priests of the tribe "but of very low social status." A large proportion of them are now Hindus. They are most numerous in Kelapur and the Wun district generally, where 88 per cent were enumerated, but there are a considerable number in Chandur and Akot, and others elsewhere.

The next group is that of the priests, which is composed of Brahmans, Jangams, a few Jatis and Pirzade and one Mulla.

Brahmans.

The Brahmans number 71,308 and form 2·46 per cent of the population of the province. Since 1881 their numbers have increased by 5,554 or 8·4 per cent. They are found in every taluk, but there are only a small number in Melghat, and in Kelapur, Wun, Darwha and Mangrul their numbers are much below the average. In the Amraoti taluk they are much stronger than elsewhere and number 7,584 or 4·1 per cent of the population of the taluk. Since 1881 there has been considerable movement amongst this caste in the province; in Amraoti their numbers have increased by 29 per cent, in Khamgaon by 25 per cent, in Ellichpur by 17 per cent, and in Akola by 15 per cent; and on the other hand, there has been a decrease in Akot of 14 per cent, in Jalgaon and Daryapur of 8 per cent, and in Balapur of 5 per cent. There is a very great disparity between the sexes of the Brahmans, there being only 706 females to 1,000 males. 36 Jains have been returned as Brahmans, but these are, I imagine, not really Brahmans by caste. It seems rather that they have adopted the caste name to signify their occupation or character as priests of the Jains. The same may be said of some of the subdivisions of the caste that were returned, such as the Marwari; by a Marwari Brahman is probably meant a Marwari priest, and not a Brahman from Marwar. In this way the strength of the actual caste has possibly been overstated.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Jangams.

The Jangams are the priestly class of the Hindu Wanis. They number 1,882 and have decreased by 634 or 25 per cent since the last census. They are found, however, in every taluk except Melghat.

Beragis.

The next group are the devotees, of whom the Beragis number 1,436; they have decreased by 93 or 6 per cent, the most marked diminution being in the Akot taluk, where the numbers have fallen from 127 to 47. The Beragis are found in every taluk.

Bharadis.

The Bharadis have increased from 1,314 to 1,452, of whom nearly half are in the Amraoti district and but a few individuals in Basim. They have shifted their quarters very considerably everywhere.

Fakirs.

The Fakirs number 7,190, more than double what they were in 1881. They are found in every taluk, and are particularly strong in Akot.

Gosawis.

The Gosawis number 12,152, and show a decrease of 861 or nearly 7 per cent. They are strongest in Chandur and Basim, but are found in every taluk. The greatest decrease is in the Akola district, where their numbers have diminished by 400, or 15 per cent.

Jogis.

The Jogis number 2,177, or 30 more than they did in 1881. They are mostly found in the southern districts, Buldana, Basim, and Wun, and are strongest in the Basim and Mangrul taluks.

Manbhaos.

The Manbhaos number 3,559 against 4,111 in 1881, the decrease being 11 per cent. They are scattered all over the province with the exception of Wun, and there are very few in Kelapur and only 1 in Melghat. They are strong in Morsi and Ellichpur, which is explained by the existence of the chief institution of the Manbhao sect at Ritpur (or Ridhpur) in the Morsi taluk.

Naths.

The Naths number 2,973, which is more than double the number shown in the returns for 1881. Of the Nath sect there were, however, over 9,000, and it seems probable that there was some confusion between sect and caste, and a comparison is therefore not very reliable. A large proportion are found in the Akola district, especially in the Akola, Balapur, and Akot taluks; there are considerable numbers also in Mehkar and Amraoti.

Wasudeos.

The number of the Wasudeos has also been doubled. There are 314, of whom a large majority are in the Pusad taluk. Most of these devotee castes are also religious sects, and a full account of their characteristics is given in the Census Report for 1881.

Guraos.

The Guraos number 9,230, within 4 of their number in 1881. They are temple servants and to some extent mendicants of a semi-religious character, but they do not wander, and therefore their local distribution does not differ much from what it was in 1881. Now, as then, a large proportion are found in the Chandur and Amraoti taluks.

The group of genealogists comprises the Bhats and Thakurs. They are said to be almost identical, both castes following the calling of village bard and combining it not infrequently with mendicancy. The Bhats number 3,157, which shows the large increase of 25 per cent upon their number in 1881. They have decreased in the Akola and Ellichpur districts, but increased elsewhere. They are strongest in the Amraoti, Morsi, and Chandur taluks. In the last-named there are 47 who

Bhats.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

have been returned as Animistic by religion, which, with 45 Mahomedans, is somewhat curious, and instances the influence of Hinduism upon the whole social fabric of the province.

Thakurs. The Thakurs number 5,099, or 45 more than they did. They are found in every taluk, and are most numerous in Basim, Akola, Darwha, Malkapur, and Akot.

Borals and Golaks. The representatives of the writer castes in Berar are few. As may be seen from Table D, the few there are have comparatively a large proportion of literates and pupils. The numbers of the Borals (25) and Golaks (146) are doubtful; they numbered 163 and 356 respectively at the last census, and as they are illegitimate people, they may be disposed to repudiate their origin.

Kasts. The Kasts have decreased from 379 to 259, nearly one-third of whom are in the Murtazapur taluk.

Kayets. The Kayets have decreased from 1,066 to 974, the chief diminution being in the Ellichpur taluk. They are scattered in small numbers throughout the province.

Parbhus. The Parbhus have increased from 477 to 632, of whom a large proportion are found in the Amraoti taluk.

Purbhaye. The numbers of the Purbhaye have fallen from 262 to 94, of whom 40 were enumerated in Chikhli. From the Amraoti district, where there were 144, they have almost entirely disappeared.

Garpagaris. The group of astrologers comprises the Garpagari, Joshi, and Sarode castes. The Garpagaris, or hail-averters, number 3,041, and have lost 1,164 or nearly 28 per cent of their strength; but this decrease and the corresponding increase among Naths, noted above, are probably due to the same cause and show differences more apparent than real; the Garpagaris belong to the Nath sect, and it is probable that some of them returned the name of the sect for that of the caste. The aggregate of both castes, Nath and Garpagari, is 6,014 for 1891 against 5,632 in 1881.

Joshis and Sarodes. The Joshis number 424. They were not separately tabulated at the last census, but were treated as synonymous with the Sarodes, of whom there were 1,180. The Sarodes alone now number 1,330, and the two together aggregate 1,754, which shows an increase of 574 or nearly half as many again. The Joshis are mostly found in the Basim and Buldana districts, and especially in the Basim taluk; the Sarodes in the Wun district.

Gondhalis. Of the group of musicians the Gondhalis are the most numerous, but their numbers have fallen from 3,212 to 3,033. The chief decrease is in the Akola district, but a large proportion of the caste still remain there.

Boharas. Coming to the trading castes, we find that the Boharas have increased from 202 to 479. They are mostly found in the Amraoti, Khamgaon, and Akola taluks, and presumably their head-quarters are in the principal towns where their business takes them. Some, however, are said to have taken to agriculture, and this may account for the 37 enumerated in the Melghat. The male sex very largely predominates, and this indicates that the caste is not settled in the province; most of them come temporarily for trade, and the increase of trade explains the increase of Boharas.

Kachhis. The Musalman Kachhis have increased from 37 to 175, of whom nearly one-third were enumerated in the Amraoti taluk. They should not be confounded with the Hindu caste of

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

the same name, who are agriculturists from the North-West Provinces. The Khojas are new to Berar, and those enumerated in the Wun district, 27 in number, were probably wandering pedlars.

Khojas.

The Komtis have apparently largely decreased, their numbers having fallen from 5,430 to 2,750, but as they sometimes describe themselves as members of the Komti division of the Wani caste, it is probable that some of them have been entered as Wanis; but of those enumerated a very large proportion were returned, as in 1881, in the Wun district, and a large roportion of the remainder in the Basim district.

Komtis.

The Lads (or Lars) have increased from 2,520 to 2,825, or by 12 per cent. Rather more than half are Jains; a large proportion of the Hindu Lads are found in the Mehkar and Chikhli taluks, and more than half the Jain Lads in the Basim taluk.

Lads.

The Wanis, taken altogether, Hindu, Jain, and Sikh, are a large caste, numbering 63,533, or 2·19 per cent of the population of the province. The Hindu Wanis number 50,270, but an accurate comparison with the numbers in 1881 cannot be made, as on that occasion they included some of those who are now shown as separate castes. Excluding the Bhattia, Jangam, Komti, and Lar castes from the Hindu Wanis of 1881, there were 50,191, but the Gujarathis complicate the question, and possibly some of the smaller subdivisions also. There does not, however, appear to have been more than a small increase any way. The Hindu Wanis are strongest in the taluks of Amraoti, Pusad, and Basim. The Jain Wanis have more than doubled their number, the figures having risen from 6,329 to 13,260; they are most conspicuous in Murtazapur and Chandur, and in the Amraoti district generally.

Wanis.

The Perkis are a Telugu caste, and the chief representatives of the Pedlar group, but it is not probable that they follow their hereditary calling in Berar. They number 1,499, and have increased by nearly 18 per cent. As in 1881, they are almost entirely confined to the Wun district, and two-thirds of them are found in the Kelapur taluk, where seemingly many of those formerly enumerated in the neighbouring taluk of Wun have now moved on.

Perkis.

Of the carrier castes the Banjaras number 52,619 and the Labhanas 25,587, and together they aggregate 78,206. In 1881 the Labhanas were treated as a division of Banjaras, and their numbers were not shown separately, but the total amounted to 60,511. The increase has therefore been 17,695 or nearly 23 per cent. This large increment shows that the immigration of these people from Hyderabad territory, which has been going on for the last quarter of a century at least, if not longer, has been fully maintained. Since 1867 they have increased by more than 50 per cent. In the Berar Gazetteer Sir A. Lyall expressed the opinion that "neither their trade nor their tribal system can survive another generation of English predominance," but the prediction has only been partly verified. The tribal system is still flourishing, but their trade is diminishing and is confined to the south-west portion of the province which lies between the railway and the Nizam's dominions. Although they are Hindu castes, both the Banjari and the Labhani have a few followers of the Musalman and Jain creeds. Banjaras are found in every taluk, but they are especially strong in Darwha, where one-third of their number were enumerated and where they formed 11 per cent of the whole population. They are also very strong in Pusad, where they form more than 7 per cent of the population. In Mangrul, Yeotmal, Kelapur, Mehkar, and Basim, there are also considerable numbers. The Musalman Banjaras were found in

Banjaras and Labhanas.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Darwha, Kelapur, and Mangrul, and the Jains in Yeotmal. The Labhanas are strongest in Basim, Pusad, and Mehkar. Taking Labhanas and Banjaras together, they form 12·5 per cent of the population of Darwha, 10·7 per cent in Pusad, 8·9 in Mangrul, 5·3 in Kelapur, 5·0 per cent in Basim, 4·9 per cent in Mehkar, and 3·7 per cent in Yeotmal. In 1881 these were the favourite taluks, but the percentages in each case were somewhat less than they are now, so that the increase among these people has been greater than among the rest of the population in these localities. The increase among males has been slightly greater than among females.

Wanjaras.

The Wanjaras number 31,802 and have increased by 4,307, or nearly 16 per cent. The distinction between these people and the Banjaras is rather a nice point. Mr. Kitts says that to confound them with the Banjaras gives them great offence, but the names are practically identical, although different derivations may be attributed to them, and it seems probable that they are of the same stock, the difference between them being, as has been remarked in an earlier chapter, that the Wanjaras are Banjaras who have given up a nomadic existence and have settled down to a civilised life. More than two-fifths of them are found in Mehkar, where they form nearly 9 per cent of the population Their numbers are very large also in Basim and Chikhli, that is to say, their principal location is in the south-west corner of the province, and the Banjaras carry on the line across the south to the east.

Sonars.

The Sonar is the chief of the artisan castes. It numbers 29,219 members and shows an increase of 6 per cent. The Sonars are very generally distributed through the province with the exception of the Melghat, where there are very few. In Akot, Balapur, Jalgaon, and Daryapur their numbers have diminished, the decrease in Jalgaon amounting to nearly 15 per cent of their former strength.

Mhalis.

The Mhalis or barbers number 35,245, of whom 17 are Mahomedans and 3 are Jains. They have increased by only 5 per cent, and while the principal increase has taken place in Kelapur and Wun and the Balaghat generally, in most of the plain taluks, Murtazapur, Ellichpur, and Daryapur, and all those of the Akola district, there has been a decrease.

Dangare.

Of the Blacksmiths the Dangare, who are found mostly in Chandur, have diminished in number, though it is possible that some of them may have been included among the Kunbis, of whom they are sometimes regarded as a subdivision.

Ghisadis.

The Ghisadis have increased from 534 to 719. They affect the southern taluks from Chikhli to Pusad.

Jirayets.

The Jirayets number 312, slightly more than they did in 1881. They are mostly found in the Akola and Buldana districts, a fourth of them being in the Jalgaon taluk.

Lohars.

The Lohars number 15,907, and have increased more than 14 per cent. They are found everywhere, but are most numerous in Chandur and the taluks of the Wun districts; in Kelapur their numbers have risen from 680 to 1,111, and in Wun from 887 to 1,240.

Panchals.

The Panchals, who are vagrant blacksmiths, number 1,885 and have increased from 1,431, or by nearly 32 per cent. They are scattered over the province and were enumerated in every taluk but the Melghat; they are most numerous in Wun and Kelapur. A small party in Yeotmal are Mahomedans.

All use subject to https://about.jstor.org/terms

Of the carpenters, turners, and masons, there are only a few castes. The Gaondis, or Raj, are masons and number 639, of whom a large proportion belong to the Pusad taluk. They have increased by nearly 20 per cent, and in Pusad have more than doubled their number.

Gaondis.

A few masons in Jalgaon gave their castes as Gosangi. They are believed to be a Telugu caste.

Gosangi.

The Sutars number 32,491 and have increased by 7 per cent. They are most numerous in Chandur, Morsi and Amraoti; their numbers have largely increased in the two former while they have diminished in the latter, and also in Akot and Jalgaon and in the taluks of the Ellichpur district.

Sutars.

The Kasars, Otaris and Tambatkars are the brass and coppersmith castes. "The Kasars take their name from the bell-metal (kanse) in which they work," and rank high among artisans. They number 7,754, of whom 196 are Jains; the increase is 90 only, or rather more than 1 per cent. They are found in every taluk but their numbers exhibit a great deal of variation since 1881. In Mehkar and Chandur there have been the largest increments and in Malkapur, Wun, and Balapur the greatest diminution; in Wun the numbers have dropped from 103 to 17; but now, as formerly, the greatest strength is in Basim.

Kasars.

The Otaris have increased in number from 1,348 to 1,484, or by 10 per cent. They are found in all taluks except Kelapur, but are most numerous in Akot and Jalgaon, where, contrary to the general fashion, their numbers have considerably increased. In Basim one man returned himself as Mahomedan and a few in Darwha are Animistic.

Otaris.

The Tambatkars number only 590, or nearly one-third less than they did in 1881. They are chiefly found in Akola and Ellichpur, although their numbers in the latter taluk have been reduced by nearly one-half.

Tambatkars.

The Simpis (or Darzis) are the only tailor caste. They number 16,365, of whom 2,626, or 16 per cent, are Jains. The increase since 1881 has been 856, or more than 5 per cent. They are found in every taluk, but are most numerous in Jalgaon and Malkapur, although their numbers have somewhat diminished in the former.

Simpis.

The Bharadbhunjas (or Bharbhunjas) are gram-parchers, whose numbers have risen from 396 to 601, much of the increase being no doubt due to immigration from the North-West Provinces. A large proportion were enumerated in the Ellichpur taluk, as was the case at the previous census. The disparity between the sexes is remarkable, there being 413 males and only 188 females, or a proportion of 100 to 45·5; the same feature is noticeable in the figures for 1881, when the proportion was 100 to 49.

Bharadbhunjas.

The Halwais, or confectioners, number 238, of whom one woman has been returned as a Jain. The increase has been 46, mostly in the Amraoti district. They are most numerous in Chikhli.

Halwais.

The Gandhis, or perfumers, have increased from 56 to 101, of whom 38 were enumerated in the Ellichpur taluk. A few are Jains.

Gandhis.

The numbers of the Tambolis, or betel-leaf sellers, have risen from 637 to 765, or 20 per cent. A large proportion are found in Pusad, and Ellichpur and Amraoti exhibit con-

Tambolis.

All use subject to https://about.jstor.org/terms

spicuous numbers. In Ellichpur, however, they have fallen considerably, as they have also in Daryápur, whereas they have increased largely in the Amraoti taluk and district generally.

In the next group of the weavers, calenderers, and dyers, there are several castes, of which not a few are recent introductions into Berar. These are the Alkori, who are dyers probably from Madras, the Bunkars, weavers from the Central Provinces or North-West Provinces, the Chenwars, who are probably the same as the Chanwars, weavers of Hyderabad, the Inkars, of whom nothing is known, the Katiars, weavers from the Central Provinces, the Momins, who are the same as the Julahas of Upper India, and the Patuals, weavers from Gujarat. Of these the Bunkars number 99, of whom the majority are found in Ellichpur; the Chenwars number 203, who are all found in Pusad, in which taluk the Inkars also were enumerated; the Katias occur in Morsi; the Momins number 290, of whom a large majority were enumerated in Malkapur; and the Patuals, of whom there are 20, are found in Akot.

Bunkars. Chenwars. Inkars. Katias. Momins. Patuals.

The Ataris are dyers, who are mostly found in Amraoti, Murtazapur, and Basim; their numbers are small but have risen from 75 to 92, of whom two-thirds are Mahomedans.

Ataris.

One single individual in the Melghat represents the Chhipa or cloth-stamping caste.

The Halbis, who are weavers, number 2,841, and have increased by 636, or nearly 29 per cent. This increase is remarkable because the Halbi caste is peculiar to Berar; the name at least, I believe, is not to be found in the returns of other provinces for the Census of 1881, and yet so large an increase cannot be entirely due to natural growth from within. The explanation possibly lies in the fact that some of them sometimes describe themselves as Kunbis, although in the returns for 1881 only a dozen are so shown, but there may have been others who adopted other appellations. This case illustrates the absolutely indefinite character of a good deal of the caste nomenclature. The chief increase is in the Ellichpur taluk, where nearly one-half of the caste is found.

Halbis.

The numbers of the Hatgars exhibit great variation from those recorded in 1881, and as this is probably due to the inclusion of some of their number among Dhangars, the consideration of the Hatgar caste is deferred till the latter are reached.

Hatgars.

The Khatris are weavers, whose numbers have fallen; there are now 1,714 against 2,015 in 1881, the decrease amounting to nearly 15 per cent. The chief diminution is in the Amraoti taluk, where the numbers have fallen from 678 to 441, but they are still more numerous there than in any other taluk. In Ellichpur and Darwha there has been a considerable decrease, and from Mehkar and Yeotmal, though their numbers before were not large, they have almost disappeared. In Akot on the other hand, where they were unknown, there are now 111, of whom 4 were returned as of the Sikh religion.

Khatris.

The Koris have largely increased and now number 435. In 1881 there were only 68, who were nearly all in the Ellichpur district; now there are 143 in the Amraoti taluk alone, 64 in the Melghat, and small numbers scattered over most of the rest of the province.

Koris.

The Koshtis are the largest of the weaving castes; they number 14,818, which is very little more than their total in 1881. They are most numerous in Morsi and Ellichpur,

Koshtis.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

although in the latter taluk there has been some diminution. In Daryapur, Darwha, and Chandur their numbers are also considerable. In the Amraoti taluk the numbers have fallen from 1,140 to 832. Some of these people are Jains.

Patwis.

The numbers of the Patwis have decreased from 747 to 524, the chief loss being in the taluks of Ellichpur, Daryapur, and Amraoti, and throughout the Akola district. They are still most numerous in Ellichpur, Amraoti, and Chikhli.

Rangaris.

The Rangaris also exhibit a decrease, their numbers having fallen from 12,471 to 12,190. The loss has been distributed over several taluks, but is most marked in the Akola district. The chief numbers are in Malkapur, Darwha, and Ellichpur.

Salis, etc.

The Salewar, Salve, and Sali are probably all of one caste, the first being the Telugu name adopted by those enumerated in Kelapur and Wun. They are weavers from Southern India, and number 9,105 or 21 less than their total in 1881. The local distribution does not show much variation, and Chikhli and Ellichpur are, as before, the favourite taluks.

Warthis.

The Warthi, otherwise known as Dhobi and Parit, is a large caste, numbering 23,084, which shows an increase of 7 per cent on the number in 1881. As the washermen of the country they are found in every taluk, but not, as might be hoped, in every village; in the Melghat there are only 24, all told, but the Korkus possibly do their washing at home. The caste is most numerous in Amraoti, Akola, Ellichpur, Chandur, and Malkapur. In Kelapur and Wun there has been a considerable increase.

Pinjaris.

The Pinjaris show a very large increase. In 1881, there appear to have been only 149, all Mahomedans; there are now 1,085 Mahomedans and 67 Hindus. They are most numerous in the Amraoti taluk and the Wun district; elsewhere they are scarce.

Dhangars.

The Dhangars, or Shepherds, who are also sometimes blanket-weavers, are one of the largest castes in Berar. The Hatgars are sometimes regarded as a subdivision of Dhangars, and although they have been tabulated as separate castes both on this occasion and in 1881, it appears, from the figures for the Pusad and Darwha taluks at least, that the names have been indiscriminately applied. The Pusad taluk and the north bank of the Painganga river has been the home of the Hatgars since about 1600 A.D., when, according to the Ain-i-Akbari, they were driven westward across the Wardha by the Gonds, and in 1881 the number of this caste enumerated there was 5,013; on the present occasion the returns show only 733. On the other hand, the Dhangars numbered 4,747 in 1881 and as many as 9,713 in 1891. So in Darwha, while the returns show a rise among Hatgars from 59 to 1,155, they exhibit a fall among Dhangars from 4,934, to 4,253. How far the error extends it is impossible to say, and the only comparisons that can be safely made are those of the combined figures for both castes. For the whole province these amount to 87,626 or 3 per cent of the total population; for 1881, they were 83,164, and the increase is 4,462 or 5·4 per cent. Of the total 10,446, or nearly 12 per cent, are found in the Pusad taluk, where they form 7·5 per cent of the population. In Malkapur they number 5,991, in Darwha 5,308, and in Chandur 5,279. In Kelapur there has been a comparatively large increase, the numbers having risen from 1,610 to 2,213, or more than 37 per cent. In Morsi, Wun, Malkapur, Murtazapur and Chikhli, there have also been considerable increments; in Pusad it amounts to 786 or 8 per cent. In Daryapur, Akola, Jalgaon, Khamgaon, Ellichpur, and Akot, there has been some diminution.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Telis.

The Telis, or oil-pressers, are another of the large castes of Berar and number 82,095 or 2·8 per cent of the total population. In 1881 they numbered 75,552, and the increase has been 6,543, or 8·7 per cent. There has been considerable variation in the local distribution. In Kelapur the numbers have risen from 1,752 to 2,604, or by 48·6 per cent; in Darwha from 4,446 to 5,541, or by 24·6 per cent; in Chandur from 9,943 to 12,187, or by 22·6 per cent; in Morsi from 3,704 to 4,494, or by 21·3 per cent; in Yeotmal from 5,195 to 6,021, or by 15·9 per cent; and in Amraoti from 6,769 to 7,829, or by 15·7 per cent. On the other hand, they have fallen in Jalgaon from 2,832 to 2,272, or by 19·8 per cent; in Akot from 3,244 to 2,865, or by 11·7 per cent; and in Ellichpur from 4,062 to 3,825, or by 5·8 per cent. The caste is most numerous in Chandur, where it forms rather more than 6 per cent of the whole population; in Yeotmal it forms 4·8 per cent; in Amraoti 4·3 per cent; and in Darwha 3·4 per cent. It thus appears that the chief strength of the caste lies in the eastern taluks, where also the largest increments have taken place, and it may be deduced from these results that the Teli caste have formed no inconsiderable item in the immigration from the Central Provinces.

Kumbhars.

The Kumbhars are potters who number 22,465, and have increased by 2,399, or nearly 12 per cent. They are most numerous in Amraoti and Chandur, in which two taluks nearly one-fifth of their number were enumerated. In Chandur the numbers exhibit a remarkable increase, having risen from 1,294 to 2,046 or 58 per cent. There have been considerable increments in the other taluks of the Amraoti district also, in the Wun district, and in Basim and Mehkar. In Balapur and Akot there has been a diminution.

Kachars.

Lakharis.

The Kachars, or Kanchari, are glass-workers, whose numbers have risen from 436 to 564, or 29 per cent. They are most numerous in Chikhli, Darwha, Balapur and Chandur. In the Ellichpur district their numbers have dropped from 104 to 34. This caste are the makers of glass bangles. The Lakharis are the makers of bangles in lac; they number 126 against 99 in 1891, and nearly half of them are found in the Amraoti taluk.

Sonaris.

The Lonaris, or salt-workers, have increased from 888 to 1,096, or 23·4 per cent. They are most numerous in Akot, Jalgaon, Khamgaon, and Balapur; and in these taluks also the increment has been very large.

Bhois.

The Bhois, or fishermen, number 27,415, and have increased by more than 19 per cent. The increase is most marked in Chandur, Kelapur and Wun, but is very general; Ellichpur and Daryapur are the only taluks which show a diminution. "The Bhois still cleave to their hereditary caste occupations much more closely than is the case with many castes," and they are consequently to be found where rivers or tanks supply them with fishing. They are most numerous in Chandur, Kelapur, Amraoti, Ellichpur and Wun, and least so in Mangrul, Mehkar, and Basim.

Injhwars.

The Injhwar are a caste of fishermen who come from the Central Provinces and number 221. They are new to Berar, and are mostly found in Ellichpur.

Kahars.

The Kahars are represented in small numbers only, but they have risen from 247 to 359. Of these, 76 belong to Malkapur, 70 to Melghat, and 61 to Amraoti.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Kevati.

The Kevati, or probably Kewats, are new to Berar. They are a fishing caste well known in Bengal and the Central Provinces. Although they number only 76 and are apparently recent immigrants, they seem to have scattered themselves throughout most of the taluks.

Kolis.

The Kolis number 32,628, which shows an increase of 2,230, or rather more than 7 per cent. The largest increase is in Basim, where the numbers have risen from 849 to 1,503, but the caste is most numerous in Malkapur, where there are 5,812, or 18 per cent of their total; in Amraoti, where there are 15 per cent, and in Akot, where there are 11 per cent. In Jalgaon they have decreased from 2,512 to 2,269, and there has been considerable diminution in Khamgaon, Wun and Mangrul. The Kolis are classed as fishermen, but the hereditary occupation has fallen into disuse in Berar. In the Gazetteer they are referred to as having acted in former times as a sort of militia to guard the hill passes on both sides of the Berar plain, but they have practically disappeared now from the Northern hills, and comparatively few are found on the Ajanta range.

Kalals.

The Kalals have increased from 14,943 to 16,234, or by 8·6 per cent. In Chandur there has been a remarkable increase, the numbers having risen from 1,348 to 2,500; in the Akola district there has been a decrease of 13 per cent, chiefly in Akot and Jalgaon, and in the Ellichpur district a decrease of 10 per cent. The caste is now most numerous in the eastern taluks, Chandur, Yeotmal, Amraoti, Darwha, Kelapur and Morsi, which contain between them more than half its numbers.

Pasis.

The Pasis, the tari-drawers of Bengal and the North-West Provinces, have increased from 256 to 467. They are most numerous in Amraoti, Murtazapur and Ellichpur, though in the last named their numbers have fallen from 100 to 65.

Kasais and Khatiks.

The Hindu Kasais, or Khatiks, number 4,959, and show an increase of 472 or more than 10 per cent. The Musalman Kasais have increased from 20 to 384. Of the former, nearly one-half are found in the Amraoti district, and nearly one-half of these in the Amraoti taluk; they occur in considerable numbers also in Ellichpur and Daryapur. Of the latter, a large proportion are in the Buldana district, and especially in the Chikhli taluk.

Chambhar.

Of the leather-workers, the chief caste is the Chambhar, who number 29,174; they have increased by 7·5 per cent. In Mehkar the numbers have increased from 1,106 to 1,605 and in Malkapur from 2,502 to 2,892; in Akot, Balapur, and Daryapur, there has been a diminution, but the Akola district still contains the greatest number. They are, however, much more numerous in Malkapur than in any other taluk.

Dabgars.

The Dabgars, or tanners, are disappearing; in 1881 there were 105 and now there are but 56, who are all located in the Balapur taluk.

Dohors.

The Dohors number 5,082, which shows an increase of 605, or more than 13 per cent. The chief increment is in Mehkar, where the numbers have risen from 641 to 1,005; from Yeotmal, where there were 60, they have all but one disappeared. The caste is most numerous in Mehkar, Chikhli, and Ellichpur, where are found more than half its number.

Madhgis.

The Madgis, or Madhige, are a Telugu caste of leather-workers, who have increased largely since 1881, their numbers having risen from 1,595 to 2,677, or by nearly 68 per cent. With the exception of one individual, they are all found in the Wun district, and they are most numerous in the Kelapur taluk.

Zingars.

The numbers of the Zingars have fallen from 1,503, to 1,313, or nearly 13 per cent. The chief decrease is in Chikhli and Ellichpur, which were among the most favourite taluks in 1881. They are now most numerous in Akot.

Mahars.

We now come to the group of village servants, watchmen and menials, of whom the Mahars, or Dhers, are the most important. Next to the Kunbis the Mahars are the largest caste in Berar; they number 355,005 and form 12·25 per cent of the total population. Since 1881 they have increased by 47,011, or more than 15 per cent. There is now very little disparity between the sexes, the proportion being 998 females to 1,000 males; in 1881 the proportion of females was 986, so that in this caste the present census may be taken as indicating less concealment of females. The chief increments have been as follows:—in Kelapur 1,959 or 44 per cent; in Morsi 4,840 or 34 per cent; in Mehkar 4,183 or 29 per cent; in Chandur 6,771 or 28 per cent; in Darwha 3,577 or 25 per cent; in Amraoti 6,093 or 24 per cent; in Basim 4,427 or 23 per cent, and in Murtazapur 3,489 or 22 per cent. In the Akola and Ellichpur districts the increase has been very small, but Ellichpur is the only taluk in which there has been a decrease. The caste is now most numerous in Amraoti, where they form 17·1 per cent of the population of the taluk; in Chandur they form 15·8 per cent; in Murtazapur 15·7 per cent; in Akola 15·0 per cent; in Mangrul 14·8 per cent; and in Basim 13·4 per cent. In the Melghat, Kelapur, and Wun, the numbers are comparatively small.

Balahis.

The Balahis hold a position among the hill tribes analogous to that of the Mahars, but their numbers are small and they seem to be fast disappearing; at the last census there were 803, but there are now only 327, who were all enumerated in the Melghat taluk.

Bhangis.

The Bhangis are the Hindu scavenger caste: the paucity of their numbers has long been observed, but a considerable increase has taken place since 1881, the numbers having risen from 691 to 1,203. Besides these 180 have been returned as Mahomedans, but they are probably not of the Bhangi caste, but Mehtars, who have adopted the name from their occupation. The Hindu Bhangis are most numerous in the Amraoti taluk, and at some distance in Khamgaon, Akola and Akot.

Mangs.

The Mangs are the lowest of all castes in Berar. They number 52,151 and have increased by 5,785 or 12·7 per cent. This caste shows the exceptional condition of an excess of the female sex, the proportion being 1,008 females to 1,000 males. The chief increments have been—in Mehkar 26·9 per cent; in Morsi 23·8 per cent; in Basim 23·6 per cent; in Chandur 21·8 per cent; in Malkapur 18·2 per cent; and in Mangrul 18·0 per cent. In Akola, Jalgaon, Ellichpur, Melghat, and Wun, there has been some diminution. The caste is far more numerous in the Basim taluk than in any other, and they form there 3·8 per cent of the population.

Mang-Garodis.

The Mang-Garodis, who are a wandering tribe, have decreased from 218 to 161, all enumerated in Kelapur and Wun.

Tagwale.

The Tagwale, numbering 113, are new to Berar under that name; they are believed to be connected with Mangs. These people were enumerated in Chikhli and Mehkar.

Gotefods and Pathrats.

The Gotefods and Pathrats are stone-dressers; the numbers of the former are small and have diminished; those of the latter have risen from 783 to 877; they are most numerous in Balapur, Murtazapur, Darwha, and Chikhli. There seems to have been a

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

good deal of movement among these people; in 1881 there were six individuals in Murtazapur and now there are 137; and in Malkapur, where there were 100, there are only 11.

Takankars.

The Takankars, whose hereditary occupation is that of repairing stone hand-mills, articles of universal use, number 5,414, and have increased by 1,067 or 24·5 per cent. In Balapur, where none were returned in 1881, there are now 260, and besides this there have been considerable increments in Murtazapur, Chandur, and Amraoti; in Mangrul there has been a large diminution. The caste is now most numerous in Akot, Amraoti, Akola, Murtazapur, and Daryapur.

Beldars.

The numbers of the Beldars, or earth-workers, have risen from 11,494 to 12,228, or by 6·4 per cent. There has been a considerable increase in Khamgaon, Mehkar, and Basim, and a decrease in Ellichpur, Yeotmal, and Wun, but a large proportion of the caste is found now as in 1881 in Darwha and Chandur.

Gochki. Manewads. Sagurs. Silawats.

The next four names in this group, the Gochki, Manewad, Sagur and Silawat, are new to Berar as caste appellations. The Gochki were found in the Wun taluk and are probably immigrants from the east or south; they are earth-workers. Manewad is probably a corruption of Mannu Waddar, the name in use by the Waddars of Mysore. The Sagurs are earth-workers, mostly enumerated in Mehkar and a few in Morsi. The Silawats are a small caste of stone-workers, who at the last census were found in Ajmere and the Central Provinces. The few now returned were enumerated in Malkapur and have possibly come from Ajmere.

Waddars.

The Waddars show a large decrease, their numbers being fallen from 7,596 to 6,116; and their local distribution exhibits the extreme of variation from that of 1881. Little importance, however, attaches to either fact, as these people are earth-workers from Southern India, whose movements depend upon the demand for labour for roads and other public works, and it is probable that they are continually shifting their quarters.

Basods and Bansfod.

The Basods and Bansfod are sometimes said to be synonymous; both castes are bamboo-splitters and workers. The numbers of the Basods have increased from 107 to 261; they are are mostly found in Morsi and the Melghat, where their occupation finds scope and the increase in their numbers points to immigration from the Central Provinces.

Borekars.

The Borekars seem to be new. They are mat-makers, found mostly in the Akola district, but scattered in small numbers.

Buruds.

The Buruds are bamboo-workers, whose numbers have risen from 1,201 to 1,269. There has been some variation in their local distribution, but they are still, as before, most numerous in the Ellichpur taluk; Amraoti, Chandur, Khamgaon, and Kelapur all contain more than 100.

Kekadis.

The Kekadis, or Kaikaris, have largely decreased, their numbers having fallen from 3,103 to 2,024. They are a vagrant people, ostensibly basket and broom makers, but of a loose and sometimes troublesome character, and the diminution in their numbers is not a matter for regret. They are most numerous in Chikhli and Mehkar.

Thotis.

The Thotis are a small Telugu caste found in the Wun district, and have not varied much in numbers or distribution. Their classification is doubtful. Mr. Kitts describes them as scavengers.

Of the group of hunters and fowlers the Pardhis and Bedars are the most numerous. The Bedars have increased very largely, their numbers having risen from 1,273 to 3,041, nearly half of whom are found in the Akola taluk alone.

Bedars.

The Berads, who are sometimes said to be of the same caste, are mostly found in the Darwha taluk, where there are no Bedars; their numbers are small and have diminished.

Berads.

The numbers of the Pardhis have risen from 5,834 to 6,899, or by nearly 12 per cent. They are a wandering people ostensibly occupied in snaring game, and not much importance attaches to their distribution at the time of the census. Malkapur, however, seems to be a favourite taluk with them, as a large proportion of their number were enumerated there both in 1881 and in 1891; in Amraoti and Daryapur there are also considerable numbers. Wild country and jungle they evidently avoid, as there are none in the Melghat and but a few individuals in Pusad, and it is not improbable that their predatory habits find play in the haunts of man as well as in those of the beast and the bird.

Pardhis.

The Aridra and Balsanto are Telugu mendicant castes, of whom a few individuals were enumerated in Kelapur; they are new to Berar.

Aridra and Balsanto.

The Bhamtis number 1,774, which shows an increase of less than 5 per cent. They are mostly found in Yeotmal, Balapur, and Chandur, and they appear to have settled in the two first named, as their numbers there were much the same in 1881.

Bhamtis.

The Dangats are a small caste of mendicants, but their numbers have risen from 271 to 486, and this is noteworthy, as in 1881 but 440 were enumerated in all India. They are mostly found in Malkapur, where their numbers have risen from 25 to 345.

Dangats.

The people who call themselves Gujarathi number 1,445, of whom 347 are Jains. They are most numerous in Balapur, Daryapur, Chikhli, Akola, and Amraoti. No useful comparison can be made with the numbers in 1881, as the name merely desigates a country and is indiscriminately used in some cases to indicate a caste subdivision.

Gujarathis.

The same may be said of the Marathe, who number 19,038, and of the Pardeshis, who number 639. The Telanga have increased from 2,002 to 2,081, a large majority of whom are found in the Wun district; there has been a very decided movement of these people from the Kelapur to the Wun taluk, as the number in Kelapur has fallen from 1,373 to 421, while in Wun it has risen from 239 to 1,044.

Marathe.

Pardeshis.

Telanga.

The Vidurs or Krishnapakshis, a hybrid caste, number 10,695, which shows a decrease of 1,052 or 9 per cent. They are found everywhere, but are most numerous in Chandur, Amraoti, and Morsi.

Vidurs.

The Gopals are by hereditary vocation acrobats, but frequently mendicants and rascals generally in practice. Their numbers have increased from 3,076 to 3,419, or by 11 per cent. A large proportion are found in Basim and Mehkar, and as this was also the case in 1881, it is possible that they may be settling down to useful occupations.

Gopals.

The Panguls are sometimes described as a division of the Gopals. They number 2,085 and have increased by 14 per cent. Two-thirds of them are found in Darwha and Basim.

Panguls.

This content downloaded from

All use subject to https://about.jstor.org/terms

Kolhatis.

The Kolhatis have somewhat decreased and now number 1,257, of whom more than half are found in the Akola district, but they are most numerous in the Malkapur taluk.

Chitrakathis.

The numbers of the Chitrakathi have risen from 1,554 to 1,612, or nearly 4 per cent; a very large proportion were enumerated in Murtazapur, as was the case, but not to the same extent, in 1881; in Akola, Chandur, and Yeotmal, the numbers are also conspicuous.

Shekhs. Pathans. Syeds. Moghals.

Of the Mahomedan tribes which are represented in the returns, the Shekhs are the most numerous and number 124,232, or nearly 60 per cent of the total number of this community; the Pathans number 48,393, or 23 per cent; the Syeds number 15,107, or a little more than 7 per cent, and the Moghals number 4,437, or 2 per cent. The remaining 8 per cent are made up of 1,992 who have returned themselves indefinitely as Musalman, and of the various items scattered through a number of different castes, tribes and races. Omitting these miscellaneous components, the Musalman tribes taken together are most numerous in the Ellichpur taluk, where they amount to 18,194 and form 12·4 per cent of the whole population; in actual numbers Amraoti with 17,163, Malkapur with 13,562, Akot with 12,186, Akola with 11,863, and Balapur with 11,027 come next in order, but in proportion to the total population Balapur comes second, with 10·8, and Amraoti third with 9·4 per cent. In the Melghat there are only 606, or 1·3 per cent; in Wun the proportion is 2·5 per cent, and in Kelapur 2·6.

Taluk components.

Having examined the local distribution of the principal castes the subject may be considered from the opposite direction and the composition of each taluk reviewed. This is provided for in the following lists, in which is given for each taluk all castes whose numbers amount to 1 per cent or more of the taluk population. Under the designation of "Musalman tribes" are included only the Shekhs, Pathans, Syeds, Moghals and Musalmans indefinite; it does not refer to all who may be Musalman by religion.

CHAPTER XI.

OCCUPATIONS.

THE distribution of the population by occupation, or more correctly by their means of livelihood, is shown in the three parts of Table XVII. Part A gives the details by sex and certain age-periods for the whole province and for the urban and rural populations respectively; Part B shows the distribution by districts; and Part C shows the numbers and occupations of those who combine agriculture with other undertakings.

The occupations have been classified according to the scheme given below, which has been framed with the object of embracing the general distribution in India. There are first 7 main classes, to one or other of which all occupations may be assorted. These general heads comprise 24 orders which the Census Commissioner has described as follows:—

The first few explain themselves. As regards the seventh, eighth, ninth, tenth, and eleventh, the object the article or service is intended for is placed more prominently than the material dealt with. On the other hand from the twelfth to the seventeenth, the latter is regarded as more characteristic of the occupation than the object for which the prepared article is intended. The distribution is, of course, conventional only and not economic, as in both orders the makers and the sellers of an article are combined, and it is only in the eighteenth order that special mention is made of those who return themselves as exclusively engaged in distribution.

The orders are divided into 77 sub-orders, some of which are further subdivided into groups, and to the sub-orders or groups are appropriated the typical descriptions, upwards of 500 in number, which apply to the individual occupations returned.

GENERAL SCHEME OF CLASSIFICATION OF MEANS OF LIVELIHOOD.

Class.	Order.	Sub-order and group, where any.
A. GOVERNMENT	I. ADMINISTRATION	1. Service of the Imperial and Provincial Governments.
		2. Service of Local and Municipal Bodies.
		3. Village service.
	II. DEFENCE	4. Army.
		5. Navy and Marine.
	III. FOREIGN AND FEUDATORY STATE SERVICE.	6. Administrative service.
		7. Military and other service.
B. PASTURE AND AGRICULTURE.	IV. PROVISION AND CARE OF CATTLE.	8. Stock breeding and dealing. (a) *Horses and horned cattle.*
		(b) *Other draught animals.*
		(c) *Small cattle.*
		9. Subsidiary services in connection with animals. (a) *Training and care of cattle.*
		(b) *Vermin destroying.*
	V. AGRICULTURE	10. Interest in land.
		11. Agricultural labour.
		12. Growth of special produce, of trees, etc.
		13. Agricultural training and supervision.
C. PERSONAL SERVICES.	VI. PERSONAL, HOUSEHOLD, AND SANITARY SERVICES.	14. Personal and domestic services.
		15. Non-domestic entertainment.
		16. Sanitation.

As the people described their occupations in their own words it may be conceived that the variety of expressions used was very large, and as a fact more than 4,000 different designations were abstracted. A considerable proportion of these were synonymous terms, but when these were eliminated, there still remained a large number with some definite distinction between them. For the purpose of classification, however, these distinctions have not been preserved beyond the typical heads which have been adopted.

Explanatory.

To some extent the expression "occupation" is misleading. The enumerators' instructions were to enter the exact occupations or means of livelihood of all those who worked or lived on private property, etc., and, in the case of women or children who did not support themselves, the occupations of those upon whom they were dependent. In the tables no distinction has been made between the workers and the dependents, and the figures, therefore, do not represent the actual numbers of those employed in the different occupations, but of those who are supported by them. Thus in the first sub-order, 265 persons are shown against the occupation of "officers," which does not mean that there are actually 265 officers, but that the officers with their families and dependents number so many. Under these circumstances the age-periods in Part A do not seem to be of much value. Were the actual workers shown separately, it would be of some interest to know the numbers of those under 15 years of age who were engaged in any particular calling, or of those above 15 years of age who were still dependent on others, but as matters stand I am not aware what information is derivable from the age distribution. Certainly the numbers of those under 5 years of age may be regarded as all dependents and non-workers, but it cannot be assumed that all those between 5 and 14 are non-workers, or that all those of 15 years of age and over are workers. The same may be said of the distribution by sex. The tables do not show the numbers of each sex who are actually employed, and although it may be presumed that nearly all the adult males are actively engaged, for adult females only very general deductions can be arrived at. We know that more males than females have been enumerated, and therefore if more females than males are shown for any occupation it may be deduced that some independent females are actually employed in it, besides the numbers of those who are dependent on the males returned; in the same way if the number of males is largely in excess, it may be presumed that the females are not actual workers. With these remarks I may proceed to examine the figures, and it will be understood that unless the contrary is expressly stated the numbers quoted will have reference to the aggregates of workers and dependents and not to the actual workers only.

Class proportions.

The proportions of the population supported in each class are given in the following statement. To Class B, that of pasture and agriculture, belong nearly three-fourths of the population. Class D, that of the preparation and supply of material substances, claims nearly one-seventh. The Government of the province provides for 3 per cent, which is a little more than the proportion supported by commerce and the distribution of material. Personal service comes next, and the professions, learned or otherwise, come last, the class of indefinite or independent occupations accounting for a larger proportion than any but the first two. In the agricultural and indefinite classes the proportions of the females are greater than those of the males.

Statement No. 72,

Showing Percentage in each Class.

	Total.	Male.	Female.
Class A	3·05	3·61	2·47
„ B	69·76	68·43	71·18
„ C	2·50	2·60	2·38
„ D	13·88	14·34	13·39

„ F	1·38	1·64	1·10
„ G	6·59	6·07	7·14

District characteristics.

The proportions for each class in the different districts are shown in the adjoining Statement No. 73. In the class of Government the percentage on the total population varies from 3·76 in Ellichpur to 2·42 in Amraoti; as Amraoti is in most respects the first district in importance, it is curious that it should come last in the proportions of this class; the high proportion in Ellichpur is due to the presence of troops. Among males the percentage varies from 4·52 in Ellichpur to 2·91 in Wun; and among females from 3·05 in Buldana to 1·86 in Amraoti. In the second or agricultural class Wun has the highest, and Ellichpur the lowest proportions for each and both sexes. In the personal service class the proportion varies from 2·86 per cent in Ellichpur to 2·08 in Basim; Wun has the highest proportion among females, and in both Buldana and Basim the proportion of females is higher than that of males. In the class for material substances Ellichpur is first with a markedly high proportion, and Basim is last. In the commercial class Amraoti comes first closely followed by Akola where the percentage among males is highest; the proportion in Wun is distinctly below the rest. In the professional class Amraoti again comes first and Wun also the last; Ellichpur takes a slight lead of Akola, and Buldana of Basim. In the indefinite class the proportions in Buldana and Basim are very high, especially amongst females. The general features then are, that the Ellichpur District is distinguished by the numbers supported by the preparation and supply of material substances and of those engaged in Government and personal service, Amraoti by the commercial and professional classes, and Wun by the predominance of agriculture.

	Females	5·37	7·28	6·01	9·60	5·62	9·56

Urban and rural features.

The urban and rural populations are distributed in the following proportions :—

	Urban.	Rural.		Urban.	Rural.
Class A	5·48	2·71	Class E	8·95	1·97
„ B	35·66	74·61	„ F	3·55	1·07
„ C	4·86	2·16	„ G	9·30	6·20
„ D	32·20	11·28			

Three-fourths of the rural population it is seen are entirely supported by agriculture, and it is to be noted that this number does not include those who combine agriculture with some other occupation. The proportion of the urban population dependent upon agriculture is also high, but many of the smaller towns are merely overgrown villages of a distinctly rural character. In every other class the proportion in the urban population is much higher than in the rural.

No satisfactory comparison can be made with the general divisions returned in 1881, as a different method of classification has been adopted, and also because while the tables for 1881 do show the numbers of the actual workers of each sex, they do not show the numbers dependent upon the various means of livelihood, but in some cases the details of the occupations, which will now be examined in the order of their occurrence, will yield to some approximate comparison.

Order 1, Administration.—This includes those who are engaged in the service of the Provincial Government, of Local and Municipal bodies, and of village administration, but does not include those employed in the special functions of the State, such as Education, Sanitation, Medical practice, Engineering, the Postal Department, etc, which are separately shown under their appropriate designations. The order contains 86,464 persons or 2·98 per cent of the total population. Sub-order 1, the service of the Provincial Government, contains 20,594 persons or ·71 per cent; a large majority are messengers and menials, whose families comprise about two-fifths of the whole number; the Police rank and file with their families account for one-fourth. The second sub-order, the service of Local and Municipal bodies, numbers 1,559 or ·05 per cent; they are mostly menials. Sub-order 3, Village service, numbers 64,311 or 2·22 per cent, and includes patels, not being agriculturists, patwaris, and jaglias. It is probable that comparatively few of the hereditary village menials are comprised,

Sub-order 1.

Sub-order 2.

Sub-order 3.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

as unless they were specifically described as in village service they would be classed under the general designation, and as they often have other occupations to which their village offices are secondary, the latter would not, under the rules (see page cxc), be enumerated at all. It seems probable also that the number of non-agricultural village headmen or patels is incorrect; patels if not actually cultivators have generally some landed interest in their villages, and all such should have returned their agricultural connection and have been included in Order V.

It is in this sub-order and under the head of "Watchmen and other menials" that the explanation is to be found of the small proportion of Class A in the Amraoti District which was remarked above. The proportions in each district of "Watchmen, etc.," (and their dependents) is as follows: Buldana 299 in 10,000 of the district population; Basim 249; Ellichpur 230; Akola 224; Wun 191; and Amraoti 165. For each inhabited village there are in Buldana 16, in Akola 13, in Basim 12, in Amraoti 10, in Ellichpur 9, and in Wun 7. Whether there are such actual differences in the village service is a question which can if necessary be better solved by direct enquiry.

Order II, Defence, which is confined to Sub-order 4, Army, contains 1,959 persons of whom less than 900 are shown as males over 15 years of age, being officers and rank and file. They were mostly enumerated in the Ellichpur District, where Paratwada, the only military cantonment, is situated. Seven persons in 10,000 of the Province are dependent upon the Army for their support.

Order II and Sub-order 4.

Order III, Foreign and Feudatory State Service, contains but a few individuals who chanced to be in the province at the time of the enumeration. These three orders comprise Class A.

Order III.

Class B, pasture and agriculture, consists of Orders IV and V. Order IV Live-stock, contains 35,078 persons, or 1·21 per cent of the population, who are dependent upon stock-breeding and dealing or subsidiary services to stock. A very large proportion of these are herdsmen or shepherds. The numbers returned as cattle or buffalo breeders and dealers afford no indication of the extent of these occupations, as they are in general subsidiary to agriculture or any other occupation; every Berari owns a cow or a buffalo as every Irishman keeps a pig. Pig-breeding here, as a means of livelihood, has very few followers, and there are not many who depend upon horses or camels. Only 20 males over 15 years of age are returned as farriers, and 18 of these belong to the towns chiefly of the Akola and Ellichpur Districts; these figures point to the very small use made of the horse, but a horse as distinct from a pony is rarely met with and the smaller equine animal generally goes unshod. The occupation of herdsman is most largely followed in the Wun District, the grazing facilities of which have been previously noticed; those who are dependent upon this source of livelihood number 8,176 or 173 in 10,000 of the population; in Ellichpur there are 114 in 10,000, a large proportion of whom presumably belong to the Melghat; in Amraoti the proportion is 74, in Basim 65, in Buldana 61, and in Akola 59. In Buldana the number of shepherds and sheep breeders is conspicuous as it was in 1881; ass and mule-breeding find more followers in Ellichpur than any where and the only pig breeders are in Amraoti.

Order IV. Stock breeding and dealing.

Order V, agriculture, relates to the main occupation of the province. It consists of four sub-orders, those who have an interest in land, agricultural labourers, growers of special products and trees, and those engaged in agricultural training and supervision, which last is statistically of no importance. The order contains 1,986,265 persons or 68·55 per cent of the total population. In addition to these Part C

Order V.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

shows that 23,121 persons are concerned in agriculture in combination with some other occupation, so that 2,009,386 persons or 69·35 per cent of the population are more or less dependent for their livelihood upon agriculture apart from the breeding of stock.

Sub-order 10.

Sub-order 10, of those with some interest in land, contains 997,602 persons or 34·43 per cent of the population. Of these 10,967 or ·38 per cent are non-cultivating land occupants; 642,689 or 22·18 per cent are cultivating occupants, and 343,895 or 11·87 per cent are cultivating tenants or sharers. The proportion of non-cultivating occupants is seen to be comparatively very small, and this is a satisfactory indication that the land is not passing into the hands of money-lenders to any great extent, as it has in some other parts of the Deccan. The sharers in Berar are practically occupants and are not therefore properly classed with tenants, but there is no provision in the table for distinguishing between them. Taking the figures as they stand, it is seen that the occupants are to the tenants as about two to one, and allowing for the transfer of sharers from the one category to the other the proportion is greater still; in 1881 the actual numbers for the two classes were 157,146 occupants to 103,821 sharers and tenants, or about three to two, so that the proportion of occupants to sharers and tenants has largely increased, which is another satisfactory indication of the stability of the agricultural class.

Non-cultivating land occupants.

Sharers.

Proportion of occupants to tenants.

Sub-order 11, agricultural labourers, contains 986,644 persons or 34·05 per cent, which is almost identical with the number of the previous sub-order, or nearly a labourer for every land occupant or tenant. There is, however, considerable difference in the sexes of the two categories; in 10,000 persons of each sex 3,609 males and 3,267 females have an interest in land, whereas 3,042 males and 3,790 females are agricultural labourers; in other words, while probably but a few females have an interest in land independently of the males of their families, a number of females are actual and independent labourers; in fact, it may be assumed that nearly all the females as well as the males of 15 years and over shown in sub-order 11 are actual workers, and in addition many of those under 15. The sub-order has been divided into farm servants and field labourers, etc, but it is doubtful whether the distinction is of much value here as the designations were very indifferently adopted at the enumeration. The adults of both classes aggregate 624,874, and of the land occupants and cultivators as well as of the labourers (that is sub-orders 10 and 11 combined or the agriculturists proper) they number 1,219,253 of both sexes. The corresponding class of actual occupants and workers in 1881 numbered 1,142,168, but many of these were boys and girls under 15 years of age. The Report says that of all the children under 15 years of age four-fifths of the boys and seventeen-twentieths of the girls were unemployed, and of the remainder more than four-fifths were engaged in some form of agricultural pursuit. Working out the processes here indicated it will be ascertained that the number of children so engaged was (about) 141, 841, and deducting these from the total gives 1,000,327 as the number of adult working agriculturists in 1881. The increment in the number now shown is therefore 218,926 on the supposition that all the adults, male and female, are actually employed. This is, of course, not the case, but allowing for the old and infirm and for a number of women of the richer class of occupants who do not work in the fields, it will be apparent that there has a been considerable increase. As there has been no corresponding increment in the extent of cultivation, it follows that the land has to support more people than it did ten years ago.

Sub-order 11. Agricultural labourers.

Numbers of agriculturists compared with those in 1881.

Composition of district conditions.

The district conditions are compared in Statement No. 74. Buldana has a very small proportion of non-cultivating land occupants and Basim has considerably less than Akola, Ellichpur and Wun, where the proportions are very similar; Amraoti has a far higher proportion than the rest, and the fact is possibly due to a number of khatidars (or registered land occupants) finding employment in the professional or commercial business of the town. Of those who have an interest in land the proportions in Buldana and Basim are much above the average and in Amraoti much below. Buldana and Akola have the largest proportions of cultivating occupants and Wun a markedly smaller proportion than any other district, but of tenants and sharers Basim, Buldana, and Wun have the most; the difference between Basim and Amraoti in this category is striking. On the other hand Wun and Amraoti have a considerably larger proportion of agricultural labourers than the rest, and Basim and Buldana show the smallest. In the former districts the agricultural labourers largely outnumber the land occupants and tenants, while in the latter the reverse is the case, and the conditions are similarly contrasted, but to a much smaller extent in Ellichpur and Akola. These facts considered in the light of the immigration suggest that the immigrants from the Central Provinces are mostly agricultural labourers, and it is open to doubt whether they can be regarded as a permanent factor in the population; the census was taken at a time when agricultural operations were in full force, and it is possible that a large number of the immigrants in the Amraoti and Wun Districts were merely temporary visitors who returned to their homes after the crops were harvested. In 1881 also the proportion of agricultural labourers was highest in Wun and Amraoti, but there was not so much difference between these and the other districts as on this occasion. The influence of the influx of agricultural labourers upon the proportions of the agricultural population is suggested also by the comparisons shown in the following Statement No. 75, in which the distribution of the purely agricultural population is given, that is, of

Distribution of the agricultural population.

Statement No. 75,

Showing distribution by districts of the agricultural population.

	1881.	1891.
Amraoti	21·17	22·79
Akola	20·68	19·52
Ellichpur	10·70	10 06
Buldana	17·71	16·40
Wun	15·50	17.29
Basim	14·24	13·94

land occupants, tenants, and labourers, or sub-orders 10 and 11, which together represent the same class as the agriculturist category sub-order 1 in the tables of 1881 with the exception of the herdsmen whose numbers have been excluded from the comparison.

I will now attempt a comparison of the agricultural figures for each district in 1881 and 1891, but as the age-periods are not shown in the district table (Part B) I must adopt another method of procedure than that used above for obtaining a comparison between the figures for the province. In another place in the report for 1881 it is said that—

"Of field employés (males) about one quarter are boys—of those who work in fields belonging to the head of their house one-sixth of the males are boys—and of field labourers more than one-sixth of the males are boys."

For the purposes of this calculation I will, therefore, assume that one-fifth of the total agricultural males are boys in actual employment, which is possibly over the mark. Those under 5 years of age may be rejected as non-workers, and the numbers of those between 5 and 14 amount to 25 per cent of the whole, and this leaves only 5 per cent of the boys between those ages unemployed. The adults form sixty-one per cent of the whole and of these 9 per cent or 5 per cent of the whole are over 60 years of age, the majority of whom are probably past work. 61 *plus* 20 *minus* 5 gives 76, and as this is possibly too high a percentage, it may be calculated that the number of working male agriculturists is between 70 and 75 per cent of the whole number shown in the Table. On this basis the figures for 1891 work out as shown in the following statement, No. 76, where they are compared with the actuals for 1881. Although the results here obtained are based on a somewhat circuitous calculation which may be more or less faulty, and therefore cannot be accepted as positive facts, yet their value for purposes of comparison between the different districts is not affected as the error is common to all; and if they are at all approximately correct, they serve to indicate very clearly the source of the decrease in the total population of Akola and of the meagreness of the increase in Ellichpur. The Annual Administration Reports show that land in both districts has gone out of cultivation since 1881, and the agricultural population have gone with it. Whether the land has been voluntarily abandoned, or whether the agriculturists have moved elsewhere because the land has not been available, is a question which can only be answered by the Revenue authorities.

Decrease in Akola.

The number of persons returned as combining agriculture with some other occupation is 23,121 or 25 in 1,000 of the population not solely agricultural. Of these, 16,437 are land occupants, 3,435 tenants, and 3,249 farm servants or field-labourers. This number does not include patels who have been presumed to be agriculturists as a rule, and have been shown independently as patels in sub-order 3 when

Agriculture combined with other occupations.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

not agriculturists. Of those who have returned dual occupations 20 per cent are money-lenders, 10 per cent are patwaris and village menials, 8 per cent belong to the sub-order of personal and domestic service, 6 per cent to that of cotton and to that of property and alms, 5 per cent are concerned in timber and wood, and also in drink and condiments, 4 per cent in religion and the same proportion in the supply of fuel and forage, and 3 per cent in oil-pressing, in the supply of dress materials, and in gold and silver work.

Of the whole number of money-lenders, 24 per cent are connected with agriculture, the greater number being returned as owners or occupants; four individuals have been shown as farm servants and field-labourers, and as money-lenders therefore they may be presumed not to operate on an extensive scale. Of those who are dependent upon house-rent or other property not land, 20 per cent are also concerned in agriculture. Of patwaris there are 17 per cent; of wood-cutters 12 per cent; of dealers in raw cotton, of priests and of pensioners, there are 9 per cent each; of sheep dealers 6 per cent; of barbers, oil-pressers, and general merchants, 5 per cent each; and of brass and copper smiths, grindstone menders, and religious mendicants, 4 per cent each; who are engaged in agriculture in combination with their other occupations.

Of the religious mendicants, 568 are returned as land occupants and 122 as tenants, and of ordinary beggars, 738 are occupants and 96 are tenants. These figures throw some light upon the curious ethics of begging in this country.

As field-labourers 18 midwives find additional employment; so also 111 shoe-makers and 233 tailors. Others who thus supplement their means of livelihood in any numbers are village menials, herdsmen, washermen and indoor servants, fishermen, firewood-gatherers and grass-cutters, cotton-cleaners and spinners, wood-cutters, bullock-drivers, and village musicians.

The next sub-order 12, growers of special products and trees, numbers only 2,017 persons or ·07 per cent of the population. They comprise gardeners, fruit-growers, betel-vine and areca nut growers, and the employés in Government forests. Betel-vine, etc, growers are most numerous in the Amraoti District; fruit-growers in Buldana and Akola; and gardeners in Amraoti and Akola.

Sub-order 12. Gardeners, etc.

Class C, and Order VI, personal and household services, contain 72,301 persons or 2·50 per cent of the population. 2·60 p cent of the males and 2·38 of the females belong to this class and order, which comprises three sub-orders. Sub-order 14, personal and domestic services, contains 70,118 persons, of whom a large majority are indoor servants, barbers, and washermen. The male barbers number 13,233 and the females 8,050, and the latter are presumably all non-workers. Among washermen and indoor servants on the contrary females predominate. The sub-order is most numerous in Amraoti and least in Basim. The next sub-order, that of non-domestic establishments, contains only a few persons connected with lodging-houses, serais, etc. Sub-order 16 refers to sanitation and contains 2,088 persons who are mostly sweepers and scavengers, of whom nearly two-thirds belong to the towns.

Order VI.

Sub-order 14. Barbers.

Sub-order 15.

Sub-order 16.

Class D, the preparation and supply of material substances, comprises 11 orders and 37 sub-orders. Order VII, food and drink, contains 84,002 persons or 2·90 per cent of the population; of the males there are 3·10 per cent and of the females 2·68 per cent. Sub-order 17 relates to animal food, and contains 25,295 persons, of whom more than half are fishermen, one-fourth are butchers, and more

Order VII.

Sub-order 17. Fishermen, Butchers, and Dairymen.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

than one-sixth are milk and buttermen. The dairymen are most numerous in Amraoti and Ellichpur; butchers in Akola and Amraoti; and fishermen in Wun and Amraoti. Among cow-keepers and milk-sellers the females predominate.

Sub-order 18.

Grain dealers.

Sub-order 18 relates to vegetable food, and contains 19,692 persons, of whom 8,920 are grain dealers who are most numerous in Akola and Amraoti; grain parchers number 2,959, and more than one-third of these are found in Akola; pulse and flour sellers number 1,513 and are most numerous in Amraoti; bakers number only 116 and are almost confined to the urban population of Akola and Amraoti; vegetable sellers number 2,256 and are most numerous in Akola; fruit and sugarcane sellers number 1,387 and are most numerous in Ellichpur; in Wun their number is merely nominal; confectioners number 2,327, of whom a half are found in the towns and a large proportion in Amraoti and Akola. Wun and Basim are much below the average in the numbers of the sub-order generally.

Bakers.

Vegetable sellers.

Confectioners.

Sub-order 19.

Country spirits.

Sub-order 19 deals with drink, condiments, and narcotics, and contains 39,015 persons. Country spirit distillers and sellers number 6,160, of whom 3,739 are males, and 2,421 are females. A large majority are found in the country, and they are most numerous in Wun and Amraoti; 844 persons are concerned in the tapping and drawing of toddy (tari), and of these the males are to the females as two to one; a large proportion are found in Amraoti and Basim, while in Akola, Ellichpur, and Buldana the numbers are nominal. The makers and sellers of jaggery and gur number 1,410 and are much more numerous in Wun than elsewhere, while in Basim there are very few. Dealers in salt number 615 who are distributed in much the same way. Asafœtida claims 238 persons, of whom 138 are in Wun where highly flavoured articles are apparently in good demand. Of pickle makers there are but a few in Amraoti and Basim, and they present the unusual feature of being all females. General grocers naturally form a large proportion of this sub-order; they number 19,852 and are found everywhere, but in conspicuously smaller numbers in Ellichpur than elsewhere. Of betel-leaf and areca-nut sellers there are 6,285, of whom nearly two-thirds are females; of adult males there are 1,417, and of adult females 3,073, and it is evident that this is specially a feminine occupation, more particularly in the towns; they are most numerous in Amraoti and fewest in Basim. Upon the manufacture and sale of tobacco and snuff are dependent 2,626 persons, of whom the largest numbers are found in Akola, Amraoti, and Wun. Opium dealers number 886, of whom one half are adult males, and females are seemingly not much concerned in the preparation or sale of the drug; they are most numerous in Wun where are also found 22 out of 26 concerned in the manufacture of ganja, etc., and these 22 are, it is curious to note, all females. The taste for highly flavoured condiments in Wun is apparently accompanied with a partiality for strong drinks and narcotics, and judging from the numbers of those whose livelihood depends upon the supply of these articles, this district is the most indulgent in the province as Buldana is the most abstemious.

Tari.

Grocers.

Betel-leaf sellers.

Tobacconists.

Order VIII.

Sub-order 20.

Order VIII, light, fuel and forage, contains 44,691 persons, or 1·54 per cent of the population. Sub-order 20, lighting, is almost confined to oil-pressers and sellers who number 16,311. There are 169 dealers in kerosine oil, and 104 persons, of whom 89 are males, are shown as match makers and sellers, but it is probable that they are sellers only and not makers.

All use subject to https://about.jstor.org/terms

Sub-order 21. Firewood and grass sellers.

In sub-order 21 come the firewood and grass gatherers and sellers and firewood contractors and dealers between whom there is probably not much difference; the former number 19,903 and the latter 2,400, and in both categories the females largely outnumber the males. Of charcoal burners there are only 505, of whom 212 are adult males. There are 1,118 cow-dung fuel preparers, and of these 541 or nearly one half are adult females; 4,144 persons are shown as hay or grass contractors and dealers, and of these a considerable majority are females. Taking the grass-cutters and dealers and firewood and cow-dung sellers together there are 10 adult females to 7 adult males, and we find here therefore some distinctly female occupations.

Oil-pressers.

The oil-pressers are very generally distributed through the province with a larger proportion in Amraoti than elsewhere. Of the firewood and grass gatherers, contractors, and dealers, a conspicuously large proportion belong to Ellichpur owing no doubt to the Melghat forests. The charcoal burners are most numerous in Ellichpur and Akola; in Wun and Basim there is one individual each, which is remarkable having regard to the extent of forest lands in those districts. Of the hay and grass contractors, etc, Amraoti has a very large share.

Brick and tile burners. Sub-order 22. Order IX.

The next order, IX, buildings, contains 18,101 persons or ·62 per cent of the population. Sub-order 22 deals with building material. Of brick and tile burners there are 5,709, of whom three-fifths are adult males. Lime burners, etc, number 898 and thatchers only 67, of whom 27 are adult males; in 1881, 22 males were shown as actual workers in thatching, and as such small numbers as these could not possibly meet the requirements of the province, it seems that the occupation is generally combined with some other.

Sub-order 23. Masons.

Sub-order 23 relates to artificers in buildings. Of masons there are 5,839, of whom the males largely outnumber the females; the number of adult males is 2,286, and most of these are probably actual workers. In 1881 the number was 1,266 males and 55 females, and the increase points to growth in the demand for brick-built houses in lieu of the common structure of mud. The number of mud-wall builders is 4,702, and, as constructions of mud are infinitely more numerous than those of brick or stone, the fact that there are a smaller number of mud-wall builders than of masons suggests that the people to a large extent build for themselves; the mass of the population are no doubt content with the very rudest of shelter. Stone-workers, that is, cutters and dressers, number 476, of whom 149 are adult males; 263 persons, of whom 111 are adult males, have been returned as builders and joiners, and 116 as plasterers and house painters. A large proportion of the lime burners, thatchers, masons, builders, and plasterers are found in the towns and the mud-wall builders belong mostly to the country. It is to be noted that there are no plumbers and glaziers and no tilers, work of the nature indicated by these callings being no doubt carried out, when requisite, by those included under the designations of builders and masons.

Mud-wall builders.

Of the brick burners nearly one-half are found in the Amraoti District; in Buldana and Basim the numbers are small, but there the mud-wall builders are most numerous. Lime burners are most numerous in Akola and Amraoti.

Order X. Cart makers.

Order X, vehicles and vessels, contains only 292 persons of whom 151 are adult males; 101 of the adult males are cart makers, and they are nearly all found in the country and in the Amraoti district. The common country cart is apparently an article of home construction elsewhere in the province. Of boat builders, etc, there are none.

All use subject to https://about.jstor.org/terms

Order XI, supplementary requirements of a miscellaneous character, contains 10,183 persons or ·35 per cent of the population. Sub-order 27, which relates to paper, etc, is represented by 111 paper makers and sellers, and 125 stationers, most of whom belong to the towns. The paper makers and sellers are nearly all found in Akola.

Order XI.
Sub-order 27.

Sub-order 28. Sub-order 28, books and prints, contains 314 persons; of the adult males 49 are returned as book-sellers, 35 as printers, 22 as print and picture dealers, and 17 as book-binders. Three adult males are shown as newspaper proprietors and managers. A large proportion of the book-sellers and print dealers are found in the country, and half the book-sellers in the Ellichpur District. The three southern districts are very barely represented in this sub-order. The next sub-order, No. 29, that relating to watches, clocks, and scientific instruments, contains but 33 persons, who with the exception of one individual in Buldana, who calls himself a scale maker, are all watch makers and sellers and are almost all found in Amraoti. It is curious that such a large town as that of Ellichpur with its neighbouring cantonment should not possess a single watch maker; possibly such work as cleaning and repairing of watches and clocks is there done by some of those who have been returned as gold and silver workers.

Sub-order 29.

Sub-order 30. Sub-order 30, carving, engraving, etc, contains 160 persons, of whom 99 are turners and 52 granite stone workers. Wood carvers are represented by 6 persons and mica, flint, and talc workers by 3. There are no engravers. The turners are most numerous in Wun and Amraoti.

Sub-order 31. Sub-order 31, toys, curiosities, etc, claims 379 persons, who are nearly all makers of kites and of little earthen dolls. The numbers of the females preponderate in this occupation. The majority belong to Akola and Amraoti.

Sub-order 32. Sub-order 32 relating to musical instruments is almost as slenderly represented as that of watches. There are 27 dealers in music and musical instruments and 11 drum makers; 23 out of the 38 belong to Amraoti; there are none in Wun or Basim.

Sub-order 33.
Bangle makers, etc. Sub-order 33 comprises bangle makers, beads and garland makers, and the makers and sellers of imitation jewellery. In the supply of such articles as these the numbers are comparatively strong. Of bangle makers in general and fitters, there are 6,358; of these, 674 are returned as working in lac, 22 in wood and bone, and 586 in glass, and it is probable that the majority who have not specified the material deal in bangles of clay. The fitters number 305 and a large majority of these are females. Makers and sellers of imitation jewellery number 498, among whom the males predominate. Of bead makers there are only 26 who are mostly male, and of rosary and necklace makers there are 8 who are all females. Flower garland makers number 464, among the adults of whom females are slightly in excess. A few spangle makers and dealers in sacred thread complete the numbers of the sub-order. These occupations are fairly distributed between town and country and between all districts with the exception of Wun where their numbers are small.

Sub-order 34. In the next sub-order, No. 34, the numbers are very small. There are 19 furniture makers and five frame makers. The requirements of the country in these respects are very limited.

Sub-order 35. Sub-order 35 relates to harness, and contains 484 persons, the majority of whom belong to the towns; a large proportion are found in Akola.

14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Sub-order 36, relating to tools and machinery, numbers 875 persons; knife and tool makers and sellers number 66, and grinders 470; 77 adult males are returned as agricultural implement makers and 62 are shown indefinitely as mechanics. In the sub-order generally males largely predominate, and three-fifths of the total are found in Akola and Amraoti.

Sub-order 36.

Sub-order 37, arms and ammunition, contains 250 persons, of whom more than half are concerned in the manufacture and sale of gunpowder; 42 are gun sellers and menders, and the same number make fireworks. The Amraoti district claims a large proportion of the total number. This concludes Order XI.

Sub-order 37.

Order XII relates to textile fabrics and dress, and contains 112,142 persons or 3·87 per cent of the population. In sub-order 38, wool and fur, there are 5,287 persons, of whom 4,827 are blanket weavers; 65 are woollen cloth manufacturers, and 272 are woollen yarn spinners; of the last named nearly all are females. 112 persons have been returned as fur dealers, but I think that this must be a mistake; the climate of Berar is not calculated to foster any local demand for furs. A large proportion of this sub-order belong to the country and to the Buldana district; in Basim also they are numerous, and in Ellichpur conspicuously few.

Order XII.
Sub-order 38.
Blanket weavers.

Sub-order 39, silk, contains 1,891 persons, of whom 1,387 are spinners and 481 weavers. Among the spinners females predominate, and among the weavers males. These are apparently urban occupations, as two-thirds of the number are found in the towns. More than one-third belong to Amraoti.

Sub-order 39.

The next sub-order, 40, relates to cotton, the staple commodity of the province; it numbers 71,905 persons, or 248 in every 10,000 of the population; 27,212 are cotton-weavers, among whom the adult males are to the adult females in the proportion of 10 to 7; 14,103 are cleaners and ginners, etc, and among these the conditions are more than reversed, the adult females being three times more numerous than the males. Spinners and sizers number 8,342 and among these the preponderance of females is greater still, the proportion of adult females to males being nearly 11 to 1. Of dealers in raw cotton there are 7,731, and 3,102 are adult males; 7,424 persons are cotton dyers among whom the males are but slightly in excess, but they preponderate again among the undefined cotton factory hands who number 4,883. Cotton carpet and rug (dhurrie) makers number 1,900, of whom 737 are adult males. Of calenderers and cotton printers there are but a nominal number. The Amraoti district claims the largest number of cotton cleaners and ginners, of dealers in raw cotton, of spinners, and of factory hands; Akola also has a considerable proportion in the same categories; Ellichpur has the largest number of weavers, and Buldana of dyers.

Sub-order 40.
Cotton-weavers.
Ginners, etc.
Cotton dealers.
Dyers.

Sub-order 41, jute, flax, coir, etc, contains 2,485 persons. Makers of hemp-rope number 851, and are most numerous in Amraoti and Wun where the females also predominate, although they are not in excess among the total number. 1,587 persons are returned as makers of sacking, tarpaulin, and gunny; they are the makers and menders of the wonderful patchwork material in which the cotton is packed for market; a large majority are males, and it seems probable that women do not actively engage in this occupation. They are most numerous in Amraoti, and while there are considerable numbers in Basim, Akola, and Buldana, there are remarkably few in Ellichpur.

Sub-order 41.

This content downloaded from
14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Sub-order 42 is related with dress, and contains 30,574 persons; 12,139 are shown as tailors and darners and of these the female adults are slightly in excess of the male; 1,914 are out-fitters, among whom the males predominate and who mostly belong to the towns. They are conspicuously numerous in Ellichpur Embroiderers number 482 who are almost all females; even amongst children the proportion is very large, and it would seem that girls are employed in this occupation from a very early age; they are found in all districts. 15,973 persons are shown as piece-goods dealers; they are the ordinary cloth sellers found in all bazars and markets; of the adults 6,693 are males and only 3,864 females. A considerable proportion belong to the towns, but they are also very evenly distributed throughout the districts.

Sub-order 42. Tailors.

Cloth dealers.

Order XIII, metals and precious stones, contains 38,129 persons, or 1·32 per cent of the population. Of these, 21,260 belong to sub-order 43 which relates to gold, silver, and precious stones; 20,180 persons are returned as gold and silver workers; they are found in considerable numbers in both town and country and throughout all districts, but are most numerous in Amraoti and Akola. Gold and silver dealers number 394, of whom 170 are adult males; one-third of the number belong to Amraoti. There are a few electro-platers, nearly all adult males, who with one exception in Basim all belong to Amraoti. Of wire-drawers and plated-ware dealers the numbers are small and they are mostly adult males of whom a considerable proportion are found in Wun where they would not ordinarily be expected. Of pearl and precious stone dealers there are 326, of whom nearly a half belong to Amraoti. There were a few coral dealers returned in Wun who were probably travellers.

Order XIII.

Sub-order 43.

Goldsmiths, etc.

Sub-order 44, brass, copper, and bell-metal, numbers 3,099 persons. Of these 1,622 are brass and copper dealers among whom the adult males are twice as numerous as the adult females, the disparity being even more marked in the rural portion, especially in Akola where they are strongest. Brass pot makers are most numerous in Akola, and workers in bell-metal in Basim and Wun.

Sub-order 44. Brass workers.

The next sub-order contains 946 persons, of whom 849 are workers in tin; they are most numerous in Amraoti, but a considerable number belong to Wun. A few workers in zinc are found in the towns of the Amraoti and Akola Districts; 79 general workers in tin, lead and zinc have been returned in Wun.

Sub-order 45. Tin, etc.

Sub-order 46, iron and steel, contains 12,824 persons who are nearly all shown as blacksmiths. They are most numerous in Wun and Amraoti.

Sub-order 46. Blacksmiths.

Order XIV relates to glass, pottery, and stone-ware, and contains 18,884 persons or ·65 per cent of the population. Only 30 of these belong to the sub-order of glass and china-ware, and they are dealers. There are no glass-blowers or makers, and in this respect there is, I think, an opening in Berar which should be taken advantage of. Close to the town, or rather village, of Wun there is a considerable area covered with sand of an exquisite fineness and most delicate shades of colour. This is at present entirely unworked, and, although I am unable to speak with any special knowledge on the subject, I think it right to call attention here to this deposit which seems to me to consist of material admirably adapted to the manufacture of a very superior glass.

Order XIV.

All use subject to https://about.jstor.org/terms

Sub-order 48, earthen and stone-ware, numbers 18,854 persons. Of potters there are 15,921; of stone hand mill makers and menders 2,890; and of stone idol-makers and sellers 43. The potters are most numerous in Amraoti and fewest in Ellichpur; their workmanship is of the most inferior character. Of the stone mill makers a large proportion belong to Akola and considerable numbers to Buldana and Basim.

Sub-order 48.
Potters.

Order XV, relating to wood, cane, and leaves, etc, contains 48,149 persons or 1·66 per cent of the population. Sub-order 49, timber and wood, numbers 34,365, of whom 28,942 are shown as carpenters, and of these the adult males are nearly twice as numerous as the adult females. They are found in all parts but are most numerous in Amraoti and in considerably less numbers in Ellichpur than elsewhere. Their handiwork like that of the potters is of a very low standard. Timber and bamboo dealers number 2,819, and among them also the adult males largely predominate; more than three-fifths of the number are found in the Ellichpur district, and a considerable number in Akola; in Buldana, Wun, and Basim there are remarkably few. Of wood-cutters and sawers there are 2,531; the adult males number 1,302 and are more than three times as numerous as the females; a good proportion belong to the towns, and the numbers in Amraoti and Akola are much larger than elsewhere. Of coopers and box-makers there are a few who are mostly adult males and belong chiefly to Basim.

Order XV.
Sub-order 49.
Carpenters.

Sub-order 50, cane-work, etc, claims 13,784 persons. Bamboo splitters and workers number 889 among whom females preponderate; basket-weavers number 6,573, the sexes being evenly balanced; of mat-makers there are 917 and the females are slightly in excess; broom makers and sellers number 4,795 among whom there are 4 adult females to 3 adult males. In all these categories the women actively engage in the occupations. Among leaf-plate makers who number 452, females are in a minority. Besides these there are a few brush-makers and tooth stick sellers who are mostly females. Bamboo-workers, basket-makers, and mat-makers are most numerous in Akola; most of the leaf-plate makers belong to Wun, and of the brush-makers to Ellichpur; Buldana has a large proportion of the broom-makers. The sub-order generally is principally represented in Akola and Buldana. Neither the soil nor the climate of the province is congenial to the growth of the bamboo, and except in the Melghat forests it is rarely met with; the number of bamboo-workers is consequently small and most of the people occupied in the production of baskets, mats, and brooms, etc, work with the leaf of the palm.

Sub-order 50.
Broom-makers.

Order XVI relates to drugs, gums, dyes, etc, and contains 3,745 persons or ·13 per cent of the population. Sub-order 51 numbers 668, of whom the great majority are collectors of wax, honey, and minor forest produce, and these are mostly found in Basim and Buldana. In Wun there are a few females engaged in the collection of camphor and gum. Sub-order 52 contains 3,077 persons, of whom 1,356 are concerned in the preparation and sale of the red powder known as "kanku," a material used in personal adornment by Hindu married women; females engage in this occupation and their numbers are in excess. There are 772 chemists and druggists and 672 perfume preparers and sellers. The representatives of all three categories are most numerous in Amraoti where are also found 73 out of 99 workers in alum and soda. Workers in indigo, madder, and logwood and kusumb dye, and ink-makers are mostly found in Ellichpur.

Order XVI.
Sub-order 51.
Sub-order 52.

Order XVII, in which there is but one sub-order relating to leather, hides, etc, contains 23,883 persons, or ·82 per cent of the population. Shoe-makers number 20,839, among whom there is a considerable predominance of males; of the adults there are five males to three females. Hide, horns, and bone dealers number 1,113, and among these there are two adult males to one female. Leather dyers number 986, bucket-makers 679, tanners 228, and catgut preparers 38. Buldana is conspicuous for its numbers in this order.

Order XVII.
Shoe-makers.

This concludes Class D. In the report for 1881 it was observed that the industrial class had largely increased since 1867, and it would be of interest to ascertain if this progress has been continued. The industrial class of 1881 more or less corresponds with the present Class D, the preparation and supply of material substances, and eliminating the figures for the occupations now otherwise classed and adding the numbers for those now included, I find that the corresponding occupations compare thus:

Comparison of industrial class in 1881 and 1891.

	Males.		Females.
1881	118,281	and	85,395
1891	142,013	,,	117,644

The numbers for 1891 are those of the adults who are (in this class) probably in some excess of the actual workers especially amongst females, but allowing for this over statement the margin of difference is sufficient to warrant the assumption of an increase proportionately not less at least than that of the total population and possibly much greater.

I now pass to class E, of which the first order (No. XVIII) relates to commerce and contains 52,671 persons or 2·84 per cent of the population. Sub-order 54, dealers in money and securities, numbers 20,351 of whom 19,282 are money-lenders and pawn-brokers, and 1,041 are money-changers. The number of males above 14 years of age in the sub-order generally is 8,360, and it may be assumed perhaps that the number actually employed is less than 8,000. In 1881 the number of males actually working as bankers, that is to say, bankers and money-lenders, was 5,325 and of money-changers 809, so the number of dealers in money generally would seem to have considerably increased. They are most numerous in Akola and Amraoti; Buldana also shows a considerable number who probably belong for the most part to Malkapur.

Order XVIII.
Sub-order 54.
Money-lenders.

Sub-order 55, general merchandise, numbers 5,164 persons of whom 1,618 are returned as general merchants and 3,546 as their assistants, clerks, etc. Among the former females are in excess, but in the latter they are in a considerable minority; Akola and Amraoti again show the largest numbers.

Sub-order 55.

Sub-order 56 relates to dealing unspecified, and contains 21,211 persons; 624 are returned as shop-keepers' clerks, salesmen, etc; 12,910 as shop-keepers' and money-lenders' servants; 5,764 as shop-keepers unspecified; and 1,913 as pedlars. Among the general unspecified shop-keepers females are in excess, but in the other categories the males largely predominate. A large proportion of the sub-order generally belongs to Amraoti, but the unspecified shop-keepers are most numerous in Basim and Buldana, which is no doubt to be accounted for by the greater specialisation of trades in the larger towns. It is to be noted that the number of money-lenders' servants is smaller than that of the money-lenders; the designation refers only to business assistants and not to domestics, and it may be inferred that a large number of the money-lenders operate on a very small scale.

Sub-order 56.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Sub-order 57 relates to middlemen, etc, and numbers 5,945 persons, of whom 2,910 are shown as brokers and agents; 1,134 as farmers of liquor and opium; 1,667 as general contractors, and the remainder as auctioneers, farmers of tolls, lessees of markets and contractors for labour. Among the general contractors the females are largely in excess, and of 16 adult auctioneers 13 are women, but I think it is improbable that women actually engage in these occupations. Nearly half the brokers belong to Amraoti and a large proportion of the remainder to Akola; the number of general contractors is very conspicuous in Wun where also the preponderance of females is very abnormal.

Sub-order 57.

Order XIX is concerned with transport and storage and contains 29,687 persons, or 1·02 per cent of the population. Sub-order 58 relates to the railway whose employés number 3,410. Sub-order 59 relates to transport by road and contains 17,023 persons, of whom 14,738 are cart-owners and drivers who follow the occupation of carrier, and 1,917 are carriers by pack-bullocks. A large proportion of the cart owners belong to the towns, and they are most numerous in Basim where they no doubt find occupation on the high road connecting Hyderabad territory with the railway at Akola; the pack-bullock drivers are probably all Banjaras who are engaged in the same way in carrying grain from Hyderabad territory to the railway, and they are found mostly in Basim and Buldana. Within the province where roads are good and transport by carts is more convenient and economical the services of carriers by animals are not required, and as railways increase and communications improve the old trade of the Banjaras must die out.

Order XIX.
Sub-order 58.
Railway employés.
Carriers.

Sub-order 60 relating to transport by water is blank but for a few boatmen in Wun and some divers in Amraoti. The latter possibly were temporary visitors, as unless they dived down wells it would be difficult for them to exercise their calling in that district.

Sub-order 60.

Sub-order 61 relates to the postal and telegraph services, and contains 3,734 persons, of whom however 2,725, who are shown as messengers unspecified, have nothing to do with either one or the other but are private servants employed as peons.

Sub-order 61.

Sub-order 62, storage and weighing, numbers 5,508, of whom 4,094 are common porters, 786 are weighmen and measurers 180 are watchmen, and 436 are engaged in warehouse services. In these categories, as might be expected, the males predominate, and nearly nine-tenths of their number belong to Akola and Amraoti.

Sub-order 62.

We now come to class F., of which Order XX relates to learned and artistic professions, and contains 36,438 persons or 1·26 per cent of the population. Sub-order 63, religion, numbers 18,850 persons, or more than half of the order. Of these 15,077 are religious mendicants, etc; the males largely predominate, and as there are 6,771 adutl males to 3,728 adult females it seems that celibacy is practised to some extent among the men, but the existence of 1,552 children under five years of age shows that it must be the exception among the women. A large proportion are found in the Amraoti district. There are 2,504 priests, etc, of all religions and denominations, and of these 954 are adult males, so that the actual number of "workers" in this profession is probably not more than 900, as it is unlikely that the women or any of those under 15 years of age are actively employed. Of catechists, etc, there are 179, of whom 97 are adult males; this category is confined to Christians and is very indifferently represented in the Wun district where there is but one

Order XX.

Sub-order 63.

Religious mendicants.

Priests, etc.

This content downloaded from
14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

individual. Exorcists, hail-averters, etc, number 155, more than half of whom belong to Amraoti. Of miscellaneous subsidiary religious servants there are 935, of whom 424 are male adults. Taking the whole sub-order together there are 65 persons whose means of livelihood are dependent upon some religious function in every 10,000 of the population.

Sub-order 64.

Sub-order 64, education, contains 4,967 persons who are concerned in the administration, inspection, and conduct of schools and other educational institutions. The number of males above 14 years of age shown as teachers is 2,306, and as the returns of the Education Department give 1,275 as the number of existing public institutions, it seems probable that they absorb most of the available teachers, and that there is not any appreciable provision for private instruction. In 1881, 1,451 males and 2 females were returned as actual school principals and teachers.

School teachers.

Sub-order 65.

Sub-order 65, literature, contains 529 persons, of whom a large majority are clerks whose specific employment has not been described. The adult males shown under the head of authors, editors, journalists, and ballad-makers, are 14 in number. These do not include newspaper proprietors and managers who have been shown in sub-order 28.

Sub-order 66.

Pleaders, etc.

Sub-order 66, law, numbers 1,903 persons or about one in 1,500 of the total population. Of the males above 14 years of age among barristers and pleaders there are 229, but, as actual employment in this profession is not attained at so early an age the number of practitioners is probably considerably less; it must, however, have increased very largely since 1881 when there were only 102; 186 adult males are shown as stamp vendors and 182 as petition writers. Pleaders and petition writers are most numerous in Amraoti and stamp vendors in Akola. In Wun there is a large proportion of kazis, but of other dependents on law there are not many.

Sub-order 67.

Medical practitioners.

Sub-order 67 relates to medicine and contains 2,753 persons, more than half of whom are practitioners without diploma. The number of males above 14 years of age shown as practitioners by diploma is 60, and allowing for some youths and dependents among these there are probably between 40 and 50 certificated practitioners; in the same way the actual number of unqualified practitioners may be estimated at about 500. There appear to be therefore in round numbers about 1 diplomaed practitioner and 10 undiplomaed to 50,000 inhabitants which cannot be regarded as a very adequate supply of medical assistance, but there has been some improvement since 1881, if an increase in the number of unqualified practitioners may be so regarded, as there were then but 337 of these or 1 to nearly 8,000 inhabitants. The diplomaed practitioners are believed to be mostly Government servants. 869 persons are shown as dependent on midwifery, but the actual number of midwives will be found among the adult females who number 653; in 1881 there were 591 and there are probably now not many more. In a previous chapter it was calculated that the number of births in 1890 was 118,499, and if we take the number of midwives actually practising at 600, we find that for each midwife there are 197 births, a proportion which shows that a large number of births must take place without any professional assistance whatever. A large proportion of the practitioners without diploma and of midwives are found in the Amraoti District; in Basim the numbers are very small.

Midwives.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Sub-order 68, engineering and surveying, contains 458 persons, of whom the adult males number 197; the actual workers are probably mostly in Government service.

Sub-order 68.

In sub-order 69, other sciences, a few persons are shown as astrologers and genealogists; and in the next sub-order, pictorial art and sculpture, 49 persons are returned as painters and 17 as photographers.

Sub-order 69.

Sub-order 71, music, acting, and dancing, contains 6,878 persons; 5,669 are players of instruments the actual performance of which is probably confined to the adult males who number 2,579, and a third of these are found in the towns, while a large proportion belong to Amraoti. Actors, singers and dancers number 1,203.

Sub-order 71.

Order XXI relates to sport and amusements, and contains 3,490 persons or 12 in ten thousand of the population; 1,366 belong to sub-order 72, sport, and are returned as shikaris and birdcatchers; nearly two-thirds of the number were found in Wun, and none in Ellichpur. This occupation is, however, certainly understated, and there is probably some objection to confess to it. The Pardhis alone number nearly 7,000 and they are instinctive snarers of deer and game birds, but as they are also regarded, not without reason, as rogues and vagabonds, they probably assumed at the enumeration various occupations of a less suspicious character.

Order XXI.

Sub-order 72.

Shikaris.

Sub-order 73, exhibitions and games, contains 2,124 persons. Exhibitors of bears, monkeys, etc, number 474, of whom 174 are adult males; they were most numerous in Wun, but are probably from the nature of their calling but temporary residents anywhere. 263 are shown as story and ballad reciters, and among these the males largely predominate; 491 are exhibitors of puppets and pictures, and here the adult males are to the adult females in the proportion of six to one, and 839 persons, of whom 319 are adult males, are acrobats. Taking the adult males of these categories there are 918 against 568 similarly described in 1881, and as it is probable that most of the adult males are actual performers, the increase is very large and indicates the encouragement which the people give to these entertainments and the prosperity which enables them to pose as patrons. It is curious too that the rural districts, Wun, Buldana, and Basim, are the most popular with the entertaining class; in Amraoti and Akola there are considerable numbers, but in Ellichpur there are very few.

Sub-order 73.

Increase of exhibitors.

The first order in Class G, that of complex occupations, is shown blank. There is no known regular combination in this province and the instruction to the enumerators to record only the principal of two or more occupations, except in the case of agriculture, prevented all but exceptional representation of dual occupations, and in these instances there was nothing in either the nature of the occupations or of the numbers returning them to indicate any special combinations.

Order XXIII, indefinite occupations, contains 138,794 persons, or 4·79 per cent of the population. 132,632 belong to sub-order 74, unskilled labour, and of these 103,383 are shown under the head of general labour; the females largely preponderate and among the adults are in the proportion of 3 to 2 males. In 1881 the numbers of actual general labourers were 30,588 males and 36,807 females, but these probably included large numbers under 15 years of age, so that no satisfactory comparison can be made. In the present return they are most numerous in Buldana, Basim, and Akola. 17,035 are shown as road and railway labourers, and among these males predominate; their distribution is of

Order XXIII.

Sub-order 74.

General labour.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

small importance as it was dependent upon the works that chanced to be in progress at the time of the census, and is of a temporary character. 3,888 are quarrymen and stone-splitters, and among these also the males predominate; they were most numerous in Basim, Buldana, and Amraoti. 8,130 persons are shown as rice-pounders; this is a specially feminine occupation, and the adult females number 5,870, which may be compared with 7,860 returned as grain-pounders in 1881. The latter is the more correct designation in this province, as grain, and not rice, is the staple food. Not much weight, however, attaches to the comparison as the occupation is commonly carried on by the women of the poorer classes for their own domestic purposes, and has merely not been distinguished in the case of some of those shown as "dependents."

Sub-order 75.

In sub-order 75 there are 6,162 persons whose means of livelihood are shown as dependent, disreputable, or undefined. The first category is confined to those who have been returned as dependent upon others whose occupations have not been mentioned, such as "house work"; they number 1,242 and the females predominate. 2,347 have been returned as of disreputable livelihood; of these, 1,644 are adult females who are prostitutes or connected with prostitution; at the last census there were 1,582; now as then they are most numerous in Akola and Amraoti; nearly one-half are found in the towns. One noticeable feature in the distribution is with respect to the children; to 765 female adults in the towns there are 216 children of both sexes under 15 years of age, and to 879 female adults in the country there are 336 children; of the children under 5 years of age there are 122 in the country to 62 in the towns. The adult males shown in this category are attendants and professional servants.

The undefined number 2,573; this is less than 1 in 1,000 and as it comprises indefinite and unrecognizable terms as well as blank returns, the proportion is perhaps as small as can be expected.

Order XXIV.
Sub-order 76.
Beggars.

The last order relates to those whose means of livelihood are independent of work, and contains 52,123 persons or 1·80 per cent of the population. Sub-order 76, property and alms, numbers 49,286 persons, of whom 46,927 persons are ordinary beggars. Males predominate but a large number of the women and of the children take an active share in this occupation. In 1881 the ordinary beggars and the religious mendicants were classed together and numbered 30,072 males and 9,139 females. Combining the number now returned there are 36,812 males and 25,192 females. Allowing for the inclusion in the latter figures of young children who are dependents and not actually beggars it appears probable that the male beggars have decreased in number, while the females have either increased largely or are to a large extent not beggars themselves but the dependents of beggars. It has been remarked above in connection with the consideration of the occupations combined with agriculture that no inconsiderable number both of religious mendicants and of ordinary beggars are land occupants and tenants. Begging in this country by no means implies proverty; in the case of the religious mendicant it is another term for levying fees for consideration given, though the consideration may be of an unsubstantial character; the ordinary beggar is generally old, or crippled, or afflicted with some infirmity, and claims the right to tax his neighbours on the ground of his physical disability.

2,069 persons are shown as supported by house-rent and shares and other private property, not land. A few have scholarships or allowances from relatives, etc; and in connection with these the number of children is curious; the children themselves are not the recipients of these means, but are the dependents of those who are themselves thus dependant. It has, however, been noticed before that in this country want of means is but a temporary bar to marriage.

This content downloaded from

All use subject to https://about.jstor.org/terms

Sub-order 77 relates to those who are supported at the public charge. 1,943 persons are shown as pensioners and of these the adult males number 702, and the actual recipients of pensions are probably included in this and considerably less. 74 persons are returned as prisoners under trial, 5 as prisoners for debt, and 815 as convicts. The great majority of these are adult males, but the numbers include 24 adult females and a few children who have accompanied their mothers to jail. In 1881 the number of convicts was 1,323 males and 58 females. The present numbers show a large and presumably satisfactory reduction; but the causes therefor can be more appropriately and efficiently enquired into by the judicial authorities than in these pages.

Sub-order 77.

Prisoners.

This concludes the list which is summarised in the following Statement, No. 77, which shows for each district the distribution of 1,000 persons among the different occupations or groups of kindred occupations. The proportions given illustrate the economic distribution of the population generally, and mark the main distinctions which characterise the different districts:—

Economic distribution and district characteristics.

CHAPTER XII.

ADMINISTRATION OF THE CENSUS OPERATIONS.

THE results of the census having been analysed and explained, it remains to give an account of the measures adopted for making the enumeration, and for the treatment of the material obtained. The arrangements for the census of 1881 were made by the Commissioner, Hyderabad Assigned Districts, but on the present occasion it was decided to entrust the work to an officer deputed for the purpose, and towards the end of April 1890 I received instructions to undertake the operations. I was at the time holding the office of Deputy Commissioner of Amraoti, and I was not relieved of that duty until the middle of September, so that for the first five months or so the time at my disposal for census purposes was very limited. It is necessary that this should be mentioned, as it is a contingency which, in my opinion, it will be very desirable on a future occasion to avoid. Unless the Superintendent is an expert—and the circumstances of Indian service hardly permit of that—there is a great deal for him to learn, and it would certainly facilitate the progress and efficiency of the work if he is allowed sufficient leisure at the beginning to thoroughly study the subject and mature his plans. The due preparation for the taking of a census may be compared to the building of a house, the construction of which has to be completed by a fixed date. Proper plans must be prepared before a sod can be turned; foundations must be dug before the walls can be built; and the walls must be raised before the roof can be laid on. Each step in the census operations is a preliminary to another, and delay or scamped work in the earlier proceedings can only lead to jerry building and bad results.

Superintendence.

I had intended to have made an endeavour to give here a complete narrative of the operations with an accurate record of what was done and of what was omitted, so as to furnish as useful a guide as possible for a future occasion, and with this view Deputy Commissioners were asked to supply full reports upon all points connected with the arrangements in their respective districts (see Circular No. 11, page cxciv). The reports received, however, were generally somewhat meagre in detail, and I must content myself with a less complete account than I hoped to give. The Deputy Commissioner of Akola (Mr. Nicholetts) went so far as to remark that he made his report as brief as possible at my request. His words are—

"This report has been made as short as possible at the request of the Census Superintendent in his Circular No. 11, dated 10th February last."

The circular speaks for itself, and I can only suppose that this observation was intended as a satire upon the voluminous character of its requirements, but the jest was unfortunately no compensation for the omission of the particulars that I wanted.

The instructions for the preliminary organisation, and the different operations up to the final enumeration were detailed in a series of circulars, the most important of which are reproduced in an appendix to this chapter. The first circular upon the subject of the preliminary organisation was addressed to Deputy Commissioners on the 10th May. The taluk being the administrative area under a Tehsildar, Deputy Commissioners were requested to divide these areas into *Charges*,

Organisation.

All use subject to https://about.jstor.org/terms

the Charges into *Circles*, and the Circles into *Blocks*. The Block became the unit of area and was to comprise generally from 40 to 50 houses, with a maximum limit of 60; at the same time each village with its prescribed lands was to form an integral Block or number of Blocks. As the entire area of a taluk is divided into definite and demarcated Revenue village areas, the arrangement provided that each such village area should form a Census unit or combination of units, and thus that every inch of territory should be included in a separate Census area. The only exception to this was the railway, the lands and premises of which were separately organised. The number of houses in a Block would under the arrangement necessarily vary very considerably. Where a village contained not more than 60 houses, it constituted one Block, however small the number of houses might be. In larger villages and in towns the size of the Block would vary according to the convenience of the locality and the density of the population. The Block was to constitute the area, the population of which one man—the enumerator—would record, but where they were small an enumerator was entrusted with two or more. There was one misconception in connection with this subject which I may mention here. It was sometimes supposed that the size of the Block was regulated only by a consideration of the area, the population of which it was possible for one man to enumerate in one evening, and there was a tendency in many places to increase the size of the Block when the houses were closely and conveniently situated. But this was not the only consideration; when the enumerator has done his work, the results have to be abstracted item by item, and one large Block presents far more difficulties to the Abstractor than two small ones; this question must, however, be dealt with later on when considering the subject of Abstraction.

The Block.

The Circle was to consist generally of from 400 to 500 houses, or of about on the average ten Blocks, and each Circle was to constitute the charge of a supervisor. A group of Circles was to form a charge at the head of which was a Charge Superintendent. The Charges were to make up the taluk, the supervision of which was to rest with the Tehsildar, under the Deputy Commissioner, who was responsible for all the arrangements in his district.

The Circle.

The Charge.

The first thing to be done was to prepare a rough map of the taluk and to demarcate upon it the boundaries of the Charges and Circles, and then to nominate provisional Charge Superintendents and Supervisors. These officers had then to test the maps for their respective areas upon the ground and to report the names of villages the condition of which, as inhabited or not, was incorrectly entered; and the Supervisors had to split up their Circles into Blocks, and submit reports showing the number of villages in their Circles, the number of houses in each village, and the proposed divisions of Blocks. Upon the receipt of these reports Deputy Commissioners were required to examine the entire organisation for their respective districts, to correct the maps, and to check, and, where necessary, revise the general distribution. This having been done, it remained to embody the results in the subdivisional register of each taluk (see Appendix page clxxxiv). This register was to form the basis for the calculation of the subsequent requirements, the supply of schedules and of various forms, and the numbers of the enumerators it would be necessary to engage; it was also to serve as a taluk index in the Census office when the returns came to be dealt with. The next step was the preparation of the indents for schedules, which it was desirable to furnish to the Press by the first week in September. Then the houses had to be numbered and the lists of men for appointment as Enumerators to be prepared. The Supervisors then had to prepare village lists showing the names of

General plan.

All use subject to https://about.jstor.org/terms

villages in their circles, the serial numbers of the blocks in each village, the serial numbers of the houses in each block collectively, and the names of the proposed Enumerators. This form was necessary as a guide to the composition of each circle and of its staff. Then they had to prepare block lists, showing the details of each block, the serial number of each house, the description of the buildings, and the names of the principal occupants. This form was the Enumerator's guide. After this, the enumeration books had to be distributed and the Enumerators to be instructed and practised in their duties before the 15th January, when the preliminary enumeration was to commence. This was calculated to occupy about a fortnight, and while it was being carried out, and during the subsequent interval before the final census on the 26th February, the preliminary record was to be everywhere thoroughly examined and tested.

In order that the Enumerators should have time to learn their instructions and to be practised in filling up schedules, it was necessary tha t the enumeration books should be in their hands by the 1st December. A Deputy Commissioner observed at the time that this date seemed full early; he thought a week was ample time for a man to learn the work thoroughly. No doubt this might have been the case if we had had to deal only with small numbers and competent instructors; but when it is remembered that the Enumerators were numbered by thousands, that each Supervisor had to instruct some ten or a dozen Enumerators, that both Supervisors and Enumerators had other occupations to follow and could noly give a portion of their time to this instruction, that the Enumerators were scattered in different villages, and that the Supervisors had to go from place to place to teach them, that the Supervisors themselves required instruction, and that the superior officers competent to give this instruction had to travel over a large area for the purpose, it will be admitted that six weeks was not too long a period to allow. As a matter of fact in the end they did not get six weeks or anything like it, and the result was in many places inefficient instruction and bad enumeration However, in order that the books might reach the Enumerators by the 1st December, it was necessary that the Supervisors should have them by the 15th November, as they had to copy the block lists into them before their distribution. To enable this to be done it was necessary that the Tehsildars should have their full supplies by the beginning of November, and to that end it was desirable that the indent should reach the Press by the beginning of September, two months not being too much time to allow for the printing, binding, and despatch of the books. As the taluk indents were certain to require careful checking and revision, and as they could not be prepared without the information embodied in the subdivisional register, and as that register itself would also require careful examination, and probably also revision necessitating some correspondence, and, therefore, delay, it will be seen that the end of June was not too early a date to fix for the submission of the register, and that in order that this might be done, it was necessary for Deputy Commissioners to take immediate action on the receipt of the first circular. Again, the Supervisors could not prepare the enumeration books for distribution until their village and blocks lists had been approved, and these could not be prepared and submitted for consideration until the houses had been numbered, and the numbering of the houses could not be undertaken until the constitution of the blocks had been definitively settled. Thus, it will be seen how each succeeding step depended upon the one before, and how necessary it was that each proceeding should be undertaken in sufficient time for its careful consideration and possible revision before the time for the next arrived. The situation, however, was not grasped, and it soon became a continual effort to make up for lost time, and at the same moment to pick up the dropped threads. two processes which do not well admit of combination.

The above outline indicates the general scheme of operations; the different points which call for further remark will now be dealt with in detail.

Preliminary counting of houses.

The instructions given in the first circular contemplated as one of the earliest proceedings to be undertaken the counting of the houses in each village, as, without counting, the reports referred to in paragraph 13 of the circular could not be properly prepared.

This duty should have been carried out everywhere by the Supervisors, but unfortunately many of the Tehsildars contented themselves either with the numbers at the last census or some other vague calculations. This did not transpire at the time, and the result was an incorrect return, which vitiated the subsequent indents for schedules and all the calculations based upon the subdivisional register, and when the houses came to be numbered, necessitated a revision of the Blocks and correction of registers, which caused much trouble and loss of time. Had the instructions been carried out, the labour would have been slight and the subsequent steps very much facilitated. All that was required was that each Supervisor should have been directed to go round the villages in his Circle and count the houses; as the average number of houses per Circle was less than 500, this duty could have been done generally in a few hours, and at the most, where the houses were scattered, the information could have been obtained in two or three days. I lay stress upon this point, as I am sure that for a future census organisation it is of the first importance to start with a fairly correct approximation of the number of houses in each village or town, and this can only be obtained by actual counting. Some officers confused counting with numbering, but it is scarcely necessary to observe here that the two operations are distinct. Perfect accuracy is not essential for the preliminary basis; it would make no difference to the organisation whether there were 50 or 52 houses in a village, but it would make a material difference whether there were 40 or 70; and where the figures of a previous census are relied upon, such differences might well arise. In the course of ten years there are great changes in small areas, and the old numbers are no guide on which to base a calculation that can be trustowrthy. On the present occasion this was more especially the case as the definition of a house had been somewhat narrowed.

Definition of a house.

In 1881 the definition of a house included 'garhis' and enclosures, and was said to be—

"the dwelling-place of one or more persons or families with their servants, having a separate principal entrance from the public way."

As garhis and enclosures may contain several houses in entirely distinct and separate occupation, which, for census purposes, should be regarded as different buildings, the definition was modified by the substitution of the word "common" way for "public" way. The roadway inside an enclosure is not a public way, but it is a way common to the residents of the different houses within the enclosure. In the first circular the revised definition, which was framed at the Agra Conference in 1889, was given without comment, but it was unfortunately misunderstood in some parts, and notably in the districts of Akola and Buldana, and this involved serious errors in the subdivisional registers and a second numbering of the houses. As it came to my notice that the definition was not everywhere correctly comprehended (though the extent of the error was not then discovered), the definition was repeated in the manual of instructions issued early in September (*see* Appendix page clxxxvi) and further explained by the following remark:—

"The common way is not necessarily a public way; thus the servants' quarters attached to a bungalow have not generally a separate entrance giving on to the public way, but as they have separate entrances from the common way, that is, the way common to each, it follows that each is a distinct house."

This content downloaded from
14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

On this subject the Deputy Commissioner, Akola, writes—

"The definition was first understood to include any number of connected houses or rooms having one entrance on to a general road, The definition was afterwards interpreted by the Superintendent of Census to mean each house or room with a separate entrance."

The Deputy Commissioner, Buldana, also writes—

"First the numbering of houses was done according to the definition of house given in paragraph 12 (2) of the Census Circular No. 1. This numbering had, however, to be changed to make it conformable to the definition of house in its widened (*sic*) signification under paragraph 2 of the Census Manual received afterwards."

These officers misunderstood the definition, but it may be doubted if they were justified in attributing the error to the wording of the definition, instead of to their comprehension of it. Fortunately the mistake was not universal. The Deputy Commissioner of Wun writes—

"The definition of 'house' as given in Circular No. 1, and repeated with explanation in the Census Manual, was generally understood by the Officers of the Census Operations."

The Deputy Commissioner of Ellichpur says—

"The definition of house is given in the Census Circular No. 1 and is also explained in the Manual. Though the definition is very clear, there was at first some misunderstanding in some places in the Ellichpur taluk."

From what came under my own observation, I am disposed to believe that the misunderstanding, where it occurred, was due to careless adherence to the old definition of 1881 and failure to recognise the change in the instructions on the present occasion.

The application of the definition of a house was in many instances a matter of some difficulty. In the following diagram four houses are represented, and it will be seen that they are separate and distinct houses, each having a separate principal entrance—A, B, C, D—on to the public and common way. Subsidiary entrances are omitted.

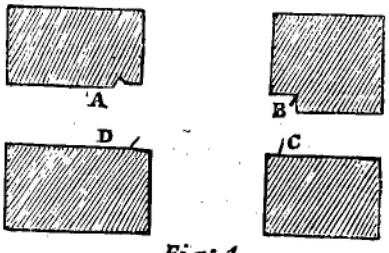

Fig: 1.

If now the outer walls be joined, an illustration of an enclosure is given with an entrance E to the public way, but a separate principal entrance—A, B, C, D— in each house to the common way as before.

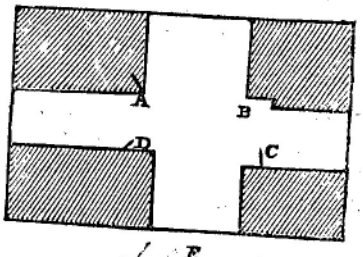

Fig: 2.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Now let other houses be built in the vacant intervals, and we have the following:—

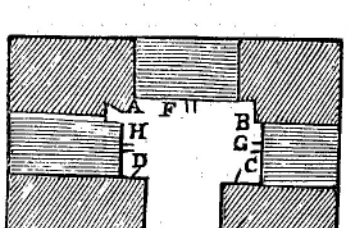

Fig: 3.

Here there are seven houses having separate principal entrances—A, B, C, D, F, G, H—to the common way, and although there may be a large gate at E that leads to the public way, they still remain with separate principal entrances on the common way, and therefore, according to the definition, distinct houses. But now we come to the following, which may be taken as not an uncommon type of a town-house, a building with seven rooms of which the inner ones open on to a court-yard.

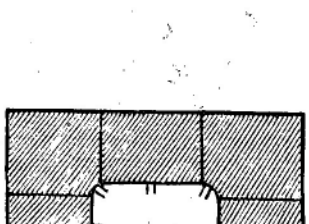

Fig: 4.

So long as this is in the occupation of one family, there is no difficulty in accepting it as one house, but if the partitions between the rooms are blocked up and the separate rooms let out to different lodgers, is it still to be regarded as one house, or as seven houses? And if as one house, where is the difference between this building and that in figure 3, which shows seven houses? The difference really is architectural, but it is difficult so to express the definition that every Supervisor should be able to apply it in every case with uniformity, and it is of course impracticable for every doubtful case to be referred to the central authority for decision. The object of a definition is not only to secure uniformity but also to ensure the enumeration of all the inmates of the house. The Enumerator obtains his information from the head of the house, but if the house in figure 4 is divided and let to different tenants, there are seven heads of houses whom the Enumerator must interrogate; and if he regards it as one house, there is danger of his omitting one or more of the separate tenants. Perhaps the best definition of a house for census purposes in this province would be the tenement in the occupation of one family of one or more persons using the same *chulha*, and of their resident servants.

Areas constituted.

Statement No. 78 shows the number of census areas as finally constituted. The areas given for "fairs, etc," were not adopted for the preliminary organisation, but were arranged as circumstances demanded for the night of the final census; they include all special areas, such as large markets or bazars, and some roads for which separate arrangements were made. Excluding these the regular organisation consisted of 170 Charges, 1,196 Circles, and 14,351 Blocks. Excluding the Melghat taluk the average number of houses in each block varied from 38 in Daryapur to 49 in Ellichpur; in Melghat it was 22. The average area of the Charges, again excluding Melghat, varied from 36 square miles in Ellichpur to 172 in Wun; and of Circles, from nearly 7 square miles in Akot to 25 in Pusad. The size of a Charge is not a matter of very great importance, and indeed in a future

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

organisation I think the Charges might be omitted with advantage, as they do not much more than form a fifth wheel to the coach. In the case of Circles it is important that the area should not be greater than the Supervisor can cover in a day's work, but the number of men available for this office is a factor in the question which has to be taken into consideration, and in such a district as Wun, for example, especially in the Wun and Kelapur taluks, there is considerable difficulty in procuring the services of suitable men not only for the post of Supervisor but for that of Enumerator also. If at the next census the Charges are abolished, there will be more men of superior intelligence and education available for the post of Supervisor; two or three officers might be selected to assist the Tehsildar and would do all that the Charge Superintendents were required to do on this occasion. If, however, they are retained, it will be desirable to carefully revise the areas of some of the Charges and Circles; on the present occasion the reports of the arrangements made were received much too late to admit of proper revision; but if the existing maps and records are preserved and forthcoming, the opportunity might be taken to adjust the areas at the beginning of the operations. In the Buldana district most of the Charges were too small and many of the Circles too large; in the original scheme for this district, and for Basim also, one Charge consisted of one Circle only, but there *was* time to revise that arrangement. In Wun and Basim many of the Circles were too large, and in the taluks of Ellichpur, Daryapur, Akot, Balapur and Khamgaon, some of the Charges were too small.

Charge Superintendents and Supervisors.

The appointment of Charge Superintendents and Supervisors was an important matter. The duties of the former consisted chiefly of inspection; but the brunt of the heavy work fell upon the Supervisors, who had to arrange the blocks, number the houses, prepare the village and block lists, and actively supervise and often assist in the actual enumeration. The Charge Superintendents belonged for the most part to the Police and Revenue Departments; whilst patwaris, schoolmasters, and ex-perganah officers formed a large majority of the Supervisors; the services of several private individuals were also secured. As, with a few exceptions, the appointments were honorary, these men deserve great credit for their work, which was almost everywhere carried out with great zeal and good will. Statements Nos. 79 and 80 show the classes from which these officers were respectively drawn. In connection with these posts it may be noted that

during the eight or nine months prior to the final census there were a large number of changes in the census staff; some men were transferred in the course of their ordinary duty, police or other, from one district or taluk to another, some went away on leave of absence, some fell sick, and others resigned from various causes. Where such changes can be obviated it would be desirable to do so; transfers in some cases might be postponed, and persons who are known to be about to take leave of absence need not be appointed.

Subdivisional register.

After the selection of these officers and the submission of their preliminary reports came the preparation of the subdivisional register. The importance of this document was hardly anywhere properly appreciated; it was not only submitted very unpunctually, as has been already remarked, but it was in many cases prepared with a want of care and precision and of attention to instructions which gave much trouble at the time, and the consequences of which have been felt throughout the preliminary operations and up to the very preparation of the census tables. This register should not only furnish information for the calculation of the requisite numbers of schedules and forms and enumeration staff, but should be an accurate index of the taluk according to which the enumeration books should be docketed and with which they can be subsequently compared and checked. The following are some of the errors which led to confusion. Inaccuracy of the revenue numbers of a village; the names of villages only are insufficient for identification as some of them are common to several places. Some registers did not show the villages which were supposed to be uninhabited, and as some of these were found to be inhabited at the census it was a difficult matter to locate them; all villages should have been shown. Many villages have offshoots, known as 'mazras,' which are adjuncts to the main village and are situated on the lands included in the same revenue number, but some of the mazras were shown as distinct villages, thereby apparently increasing the number of villages. Most towns and big villages consist of aggregations of 'khels' or quarters, formerly separate villages and mazras, bearing different names and revenue numbers; in some cases the register showed only the name of the town while the enumeration books bore the names of the khels. For instance, the town of Jalgaon consists of 12 khels with different names and numbers, but while the

town of Jalgaon alone appeared in the register the names of the khels only were entered on the enumeration books, from which it was difficult to know whether they belonged to distinct villages or, if not, to what other village or town; there was nothing to show either on the books or in the register that they belonged to Jalgaon. The preparation of Table III especially was much hindered by such mistakes as these.

House numbering.

The instructions for the numbering of houses were contained in a manual issued early in September (see Appendix, page clxxxvi), and the 15th October was prescribed as the date by which the operation should be completed. In some taluks this date was not exceeded, and in most, except where renumbering was necessary, the work was completed by the end of October. In the Melghat taluk it was not finished till the end of November. In the Akola district numbering was commenced without orders in July, and consequently when the instructions were issued it was found necessary to do the work over again. The material generally used was charcoal and oil, coal-tar, or red ochre (garu). The most efficient mode of numbering was to put a patch of white chunam upon the house wall beside the principal entrance and to paint the number in bold figures upon the white ground. In Wun and one or two other places the work was made the occasion for considerable artistic display, and appeared to afford much amusement to the village children. In some places, on the other hand, the Supervisor's object seems to have been to make it a puzzle to ascertain where and what the number was, the situation being screened, and the figures microscopic. In some of the towns of the Ellichpur district tin plates bearing painted numbers were affixed to the houses, the cost being met by local subscription, which the Deputy Commissioner states was given willingly. The cost of the ordinary numbering was generally very small, though it seems to have varied considerably; figures for the districts of Ellichpur and Basim are not forthcoming; of the rest, the cost in Wun was R10, in Buldana and Amraoti between R40 and R50, and in Akola a little more than R121. Whether the variation was actual or nominal and due to a matter of account is not known, but no doubt the renumbering in Akola and Buldana accounts to some extent for the higher cost in those districts. Taking the figures as they stand, the average cost in Wun for every thousand houses was less than two annas, in Amraoti between five and six annas, in Buldana seven annas and a half, and in Akola nearly fifteen annas; and for the aggregate of the four districts a little less than eight annas.

Indents for schedules.

In Circular No. 4 Deputy Commissioners were asked to submit their indents for enumeration books before the end of August, and with one exception the date was observed; but the indents received were found upon examination to be so irregular and apparently unreliable that it was necessary to entirely revise them upon the data supplied by the subdivisional registers, which at that time there was no reason to mistrust. These indents had been prepared for each taluk by Tehsildars, and seemed to have been framed on mere guess-work and to have been passed on by Deputy Commissioners without any scrutiny. The books, it had been mentioned, were to be bound in four standards, containing respectively 10, 30, 50, and 70 schedules. Yet one indent contained a demand for books of 20 schedules; in the same indent was a demand for 647 books of the lowest standard for one taluk, while for a larger taluk in the same district the demand was for 100 only; in another district the demands for two taluks were 28 and 402 respectively; and so on. The revision necessitated correspondence and occasioned delay, so that a precise indent for the province was not ready until the 21st October; a provisional indent was, however, despatched to the press on the 19th September, and this met the subsequently ascertained requirements with fair approximation.

All use subject to https://about.jstor.org/terms

The books were printed and bound at the Government Central Press, Bombay, and were despatched to their several destinations at the end of October and the beginning of November; and I may here record my sense of obligation to the Superintendent of the Press for the promptitude with which these indents and other printing requirements were dealt with; the work turned out by the Press was also excellent, the printing was good, the binding, with a few exceptions, was accurate and strong, and the cost extremely moderate; 18,389 books were supplied at a cost of R1,608, or less than an anna and a half each. The preparation of indents is an important matter. A sufficient supply of books is essential, and to ensure this some reserve is necessary to meet damage, waste, and unforeseen demands; but on the other hand a superfluity involves unnecessary expense. If the preliminary organisation is carried out with care, there is no reason why the requirements of each taluk should not be calculated to a nicety. On the present occasion 15,915 books were actually used for enumeration, and there was an additional expenditure of 784 books, presumably damaged, which was nearly 5 per cent. of the actual requirements. There remained unused a balance of 1,606 books, which have been since sold for R19-13-9. These figures do not quite make up the number charged for by the Press, but the latter included a small supply to some of the Contingent stations in the Hyderabad dominions, and an accurate account of the receipt and expenditure of books is perhaps not to be expected, although it is desirable; there are so many demands in the last few days for a supplemental book here or a few extra schedules there, which involve transfers from one area to another, and the tearing up of books for the distribution of the loose sheets, that it is intelligible that there may be some difficulty in keeping a check upon the receipts and issues, especially when the responsible officers have other duties independent of the census demanding their attention at the same time. The following Statement No. 81 shows the expenditure of each standard of books as reported by Deputy Commissioners, but these figures are possibly not quite accurate, and in some taluks a few manuscript books were used.

Statement No. 81.

Showing number of enumeration books reported as used.

District.	Books of 10 schedules.	Books of 30 schedules.	Books of 50 schedules.	Books of 70 schedules.	Total.	Balance unused.

Standards of books.

The different standards of enumeration books were adopted for purposes of economy. Each book was primarily intended to suffice for one block, each house having a separate page or schedule; and as the sizes of the block varied, there would have been a considerable waste of schedules if only one standard had been adopted. The books of 10 schedules were intended chiefly for supplemental purposes in cases where for any reason the original book was found insufficient; those of 30 schedules were for blocks of less than 26 houses; those of 50 schedules for blocks of from 26 to 45 houses; and those of 70 schedules for the larger blocks. I think that the margin allowed was not quite sufficient, and that each standard except the lowest might have been with advantage a little larger. Each schedule contained space for the enumeration of eight persons, which would suffice for the majority of house-

holds, but in the interval between the preliminary and final enumeration there may be changes which necessitate the use of a second schedule, and if there are not sufficient spare pages, a supplemental book is necessary, and this for the subsequent purpose of abstraction it is better to avoid as far as possible. For the 14,414 blocks (irrespective of the Railway) there were used, as has been said, 15,915 books, or about one supplemental book in every ten blocks. The number of supplemental books and those damaged or otherwise expended amounted together to 15 per cent. on the number of blocks.

Enumeration book.

The enumeration book contained first the general instructions to the Enumerators for both the preliminary and the final records; then rules in detail for filling up each column of the schedule; a sample schedule with the entries completed; a series of standard questions that the Enumerators might put to householders to obtain the requisite information for filling up each column; a form of abstract to show the number of occupied houses and the number of persons of each sex enumerated, to be filled in after the final census; then the block list, which has been already described; and finally the schedules for the enumeration. On the cover was a form of docket for the description of the block to which the book belonged. When the block list had been completed the books were distributed to the Enumerators, the numbers of whom, with the classes from which they were drawn in each district, are given in Statement No. 82. A large number of patels and patwaris, ex-pergannah

officers, village school-masters, and clerks and other subordinates of various Government offices were employed, but the majority were private persons whose services with a few exceptions were obtained gratuitously. For the Melghat taluk the Deputy Commissioner found it necessary to depute 24 men specially for the purpose from Ellichpur or elsewhere, and they were paid R12 each to cover their travelling and living expenses while so employed. In the Wun district

a number of men were paid small sums to meet the actual cost of travelling; this was necessary, as in many villages, especially in the Wun and Kelapur taluks, there were no residents qualified to act as Enumerators, and those who did the work had in some cases to make long journeys for the purpose: the whole expenditure on this account was ₹168. In Amraoti there were a few small payments, amounting to ₹3-8, on the final night for the enumeration of road travellers, voluntary agency at the last moment being wanting. The average numbers of persons recorded by each Enumerator was 211.

Instruction of the Agency.

For the general guidance of all officers a manual of instructions was issued, and a copy in Marathi was supplied to every Charge Superintendent and Supervisor. This pamphlet contained most of the instructions requisite for those officials and for Enumerators also, so that the former could learn from it what they had to do themselves and what they had to teach others to do. With the instructions were included several miscellaneous examples of schedule entries and lists of some of the principal sects of religion and subdivisions of caste that are met with in Berar. The enumeration book also, as has been described, contained the Enumerators' instructions and afforded three lights to guide him in any particular difficulty in filling a schedule: first, a suitable question or questions calculated to elicit the information required, secondly, a specific rule applicable to each column of entry, and thirdly, an example. Personal instruction was also given. I made a tour of the province from October to January, and in each taluk held a meeting of as many Charge Superintendents and Supervisors as could be got together. The meetings were generally very well attended, though very unpunctually, as might be expected from the Berari; the instructions and rules were successively read and explained, and any difficulties that were propounded were discussed and disposed of; some of the men were then practised in filling up the enumeration schedules by recording entries for others of the persons present, and the mode of proceeding and the mistakes to be guarded against were thus practically illustrated. Tehsildars, Charge Superintendents and Supervisors were enjoined to hold similar meetings of Enumerators, so that every one of the staff might have some instruction, and the Deputy Commissioners report that such meetings were held, but they give no details as to the number of meetings or who attended them, and judging from the results, I am of opinion that this duty was very insufficiently performed The best work in this respect that came under my own observation was in the Daryapur taluk, which I did not reach till late in my tour, and where I found that the Tehsildar, Mr. Shapurji Virji, had very efficiently anticipated me, and that his subordinates were fully instructed. There appears to have been no reason, however, why this duty should have been left to the Tehsildars only. Deputy Commissioners and their Assistants might have done much good work in this respect in their tours, and it was prescribed in paragraph 14 of the Manual, but it does not appear that they did anything at all. Granting that there was some delay, Enumerators were appointed in most places before the 1st of December, and between that date and the 15th of January each District Officer might have held one or two meetings every week in different parts of the districts, and every Enumerator might thus have had the benefit of superior instruction. The work turned out shows that it was very much needed.

Preliminary record.

The preliminary record was commenced on the 15th January, and in most places occupied about a fortnight. In the Chikhli taluk it was completed in five days; in some taluks it was not finished until the middle of February, and in the Pusad taluk, owing to an insufficient supply of books, not until the 23rd of that month. The advantage that should have been taken (see paragraph 15 of the Manual) in the interval before the final cen-

Checking.

All use subject to https://about.jstor.org/terms

sus of checking the preliminary record was, judging again from results, very much neglected. The Deputy Commissioners all report in general terms that the work was thoroughly examined, but they do not state what measures were adopted for the purpose, nor give any details. The most common form of error was the blank return, the omission to fill in one or more of the columns of the schedule, a defect which could have been detected at a glance. The following are a few examples of the errors of commission. In column 8, for the civil condition, a person was entered as "married and widowed;" whether this meant that he had been married and had become widowed, or that he had been widowed and had married again can only be guessed; an "unmarried widow" is a little less doubtful. In column 9 for "parent-tongue" two languages were entered, one for each parent possibly. The sex in column 6 was often opposed to the sex of the name and of the adjectival terminations in the other columns; a man's name would be coupled with the condition of "widow." Sometimes both sexes were given, as "stri-purush" or "purush-stri." The parent-tongue of an infant was given as "cannot talk," or left blank for presumably the same reason. In the case of infants also the civil condition and education was often regarded as sufficiently accounted for by the repetition of the word "infant;" the education might certainly be deduced, although in one case an infant was entered as "literate;" but as infants may be not only married, but widowed, the civil condition was left in doubt. Caste and religion were intermixed in every conceivable way; one man's religion was entered as "Marathi;" another's was given as Hindu, but his sect, caste, and subdivision of caste were stated to be "Musalman;" one whose name was "John" was entered as "Christian," sect "Mission Church," and caste "Israelite." Some Chinese in Akola were stated to be Hindus of the Smarth sect and Sutar caste, although they were born in Canton and spoke Chinese; another Chinaman was entered as a Hindu of the Chinese caste. About the most extraordinary jumble was the entry of a woman as of the Hindu religion, Jain caste, and Gond sub-caste. These are some of the most striking, but mistakes of some kind or other were not exceptional; some of the books teemed with errors, and the general record cannot be pronounced anything but bad. In the taluks of the Wun and Akola districts and in some others the preliminary record was made in rough, with the intention that after revision fair copies should be made in the enumeration books; this would have been an excellent plan if the copies had been always completed, but unfortunately in many instances they were not; for example, in one book eight persons were entered on one schedule and the first four columns completed, but the rest left blank, as if the writer had been interrupted in his work and had forgotten to finish it afterwards. Some errors were to be expected, especially in connection with sect and caste, but the great mass of mistakes were of such an obvious character that the only conclusion can be that the books were not properly examined. In the Abstraction Office it was attempted to rectify the mistakes by a local enquiry in each case, and several hundred queries were sent out with this object, but the plan had to be abandoned, as it was found that the abstraction work was impeded by the necessity of putting aside the books pending the receipt of replies.

Examples of bad enumeration.

The final census on the night of the 26th February was taken without much difficulty. The weather was fine, and there was a bright moon. The work consisted only of bringing up to date the enumeration already recorded by cancelling the entries for persons no longer present and adding fresh entries for the new-comers. It was commenced generally about an hour after sunset, and was completed in most places before midnight. There was a fair at Bhiltek in the Amraoti district, at Ooperai in the Ellichpur dis-

Final round.

Fairs.

trict, at Pathur, Malsoor, and Dhanora in the Akola district, and at Pardi, Asra, and another at Dhanora in the Basim district, and for the enumeration of the people assembled a special staff was appointed; it would have been interesting to know what arrangements were made for this enumeration, but beyond the general fact that they were 'special' no information has been furnished to me.

Travellers by road.

The enumeration of travellers on the roads was taken either by the ordinary local staff assisted by village mahars who watched the roads, or, where the traffic was heavy, by additional Enumerators. The travellers after enumeration were provided with tickets to prevent their being counted again, and the number of tickets thus issued in each district was as follows:—

Amraoti, 4,246; Ellichpur, 3,201; Akola, 2,777; Buldana, 3,355; Wun, 1,893; and Basim, 1,202—total 16,674. The largest demand for these tickets was in Malkapur, from where it appears a number of the people were starting on the census night for a fair in Khandesh. The total number with the number of railway passengers represents the travelling population of the province, though probably roughly only, as tickets may have been issued to persons who were not *bonâ fide* travellers. They amount to 59 persons in every 10,000 of the population.

Officers in camp.

In paragraph 9 of the manual officers in camp had been instructed to enumerate the parties attached to them, but in some cases they prepared their private schedules only and left their servants and followers to be enumerated by the local staff. This was a troublesome mistake, as the local Enumerators had no alternative but to include these persons as new-comers in their blocks and they thus augmented their village returns. As these persons properly belonged not to the village where they happened to be enumerated, but to the same locality as their masters, it was necessary to eliminate them subsequently from the village returns, and it was a matter of difficulty to distinguish them accurately.

Householders' schedules.

For the enumeration of Europeans and Eurasians loose sheets called "householders' schedules" were issued, and the head of each house was required to fill them up and return them the next day. The intention of these schedules was merely to facilitate the work, it being thought that a native Enumerator would be likely to make mistakes in the translation or transliteration of the details. It is doubtful, however, whether the advantage is not more than counterbalanced by the trouble which the loose sheets give afterwards, as they are very liable to be torn and misplaced. The use of them should at least be strictly circumscribed, and the idea that any privilege is conferred by the use of a private schedule should be discouraged. One native officer who was given a private schedule filled it up in the vernacular, and as he was apparently unable to read the instructions which were printed in English, he inserted sixteen persons on one page, which was intended for eight only, and the entries were confusing. There was no reason why this officer and his family should not have been enumerated in the ordinary manner. There is a danger also in the use of a private schedule of a double enumeration; at least it would seem so, as the Deputy Commissioner of Buldana was enumerated twice, on his own householder's schedule and in the Enumerator's block book, but how such a mistake could occur it is not easy to see. In connection with the returns of European officers, it may be noted that many of those having military rank entered their occupations wrongly; 'Colonel,' 'Surgeon-major,' etc, are ranks, not occupations, and the entry of such terms does not show whether the officers are in the administrative or army service. As directly the schedule is abstracted the identity of the individual is lost, it is a matter of some difficulty to trace the returns back to the schedules and

existed at places where there are large communities of Mussulmans, Rajputs, Maratha Deshmuks and others, there the Act and its provisions was really a help. Such difficulties were removed by the engagement of the opponents' co-religionists as Supervisors and enumerators, and by making known the provisions of the Act through them."

This language is somewhat general and the Deputy Commissioner mentions no facts to illustrate it, and he says further on :—

"The attitude of people was on the whole favourable omitting a few instances in which the opposition did not last long";

so that it may probably be accepted that the experience in the Akola district was much the same as elsewhere. There will probably always be some individuals who object to the inquisition of the Enumerator, but the census is now no novelty and I venture to hazard the opinion that so far as the attitude of the people is concerned no population in the world could have been enumerated with less trouble than that of Berar. As to the objection to give the names of females, it was of no importance, the entries in such cases being "wife, daughter, etc, of so and so." There were no prosecutions under the Census Act, and the only provision which there would have been any occasion to put in force was that empowering punishment to a Census Officer for refusing to act as such, but as a matter of fact the Census Act was of no practical utility in Berar, as it was not brought into force until it was too late to take any steps under it. The Act was passed on the 16th October 1890, but it was not until the 23rd January that its extension to Berar was notified in the *Gazette of India*, and it was of course some days later before the text of the Act and the intimation of its extension reached the Deputy Commissioners. Earlier in the operations several complaints were made of persons refusing to act as Enumerators, and in some places there was some difficulty in arranging for the performance of the duty. The difficulties were got over, but they were none the less real, and a single prosecution for recusancy at the beginning, had the Act been in operation, would have had useful effect.

The Census Act.

When the census was over the enumeration books of each taluk were collected and despatched by the Tehsildars to the Census Office. It has been said that no time was allowed for checking the work after the census, as in 1881, but it was intended that the main portion of it, that is, the preliminary record, should have been checked before the final census, after which it would only have remained to check the additions (entered in red ink for facility of reference), and this would not have occupied long. The instructions of the Census Commissioner for India to commence abstraction as early as possible did not, however, admit of the grant of further time for checking purposes; but, except in a few instances, the despatch of the books was not so prompt as to prevent some further examination. The books of the Murtazapur taluk were the first to arrive and were received on the 2nd March, as early a date as was possible; those for Amraoti, Balapur, Akola and Morsi came in on the 5th and 6th; between the 10th and 14th, seven more batches arrived; then there was a lapse of nine days before any more came in, and the rest were received on different dates up to the 2nd of April, with the exception of the books of the Chikhli taluk, which did not arrive until the 18th April, an altogether unnecessary delay, which was made the subject of a communication to the Commissioner, Hyderabad Assigned Districts, at the time. It is well to mention here that in some cases the books were very badly packed and were found to be perforated and torn by the nails with which the boxes had been fastened; this might have been avoided with ordinary care, and should not be allowed to happen again. As in the course of abstraction each book passes through many hands, one that starts in a ragged condition has small chance of surviving to the end.

Collection and despatch of books.

The Census Office.

The first thing to be done in the Census Office was to see that the dockets of the books were properly and legibly filled in and that the full complement of books for each taluk was received, and then to register and arrange them for subsequent distribution. This required the supervision of a capable ministerial officer, and the services of a clerk in the office of the Deputy Commissioner of Amraoti, who had been selected as Record-keeper, had been promised from the 1st March, but there was very unfortunately some delay in relieving him, and he did not report himself at the Census Office until the 11th. Meanwhile, a large number of books had arrived and there had been no one to dispose of them, and when the Record-keeper found what was before him he was so appalled that he fell sick. The circumstances were undoubtedly most trying; masses of books to be examined, sorted, registered and arranged; invoices to be compared with the packages and receipts to be given, and at the same time demands from the Abstraction Office for books to work upon, such demands necessitating further registration and compliance with the rules framed for their issue and return. The situation required a cool head and a clear brain, and it is not to be wondered at that the Record-keeper was not equal to the occasion. It was accordingly a long time before this branch of the Office settled down into proper working order, and one serious consequence was some neglect in registration, which resulted in the issue of the same books for abstraction several times over, and thus caused a waste of time and labour. I have gone into this circumstance at length, as it seems desirable to show the absolute necessity of the requisite staff being at their posts beforehand ready to dispose of the material as it arrives. With the books of each taluk, except the Melghat, came a Munserim or Karkun, whose business it was on arrival to deliver his books to the Record-keeper in good order. It was soon found, however, that the dockets of many of the books were incomplete. These dockets were very important; without a docket the contents of a book were all but valueless, as it was all that identified the book with the locality to which it related; and until the docket was complete with the name of the taluk and village and the number of the Block, Circle and Charge to which it belonged, it could not be received for abstraction. This should have been done before the census, and Tehsildars and their subordinate Census staff were particularly enjoined to be careful on this point; the matter would have been a simple one if dealt with at the right time and there was no excuse for its neglect. It was, however, not so simple a matter to make good the omissions afterwards, and many of the Munserims were engaged for days and even weeks in putting their books into order. The services of most of them were not therefore available for assistance in the abstraction office until long after the work had commenced.

Meanwhile a number of clerks had been engaged, and on the 11th March 163 men were set to work to learn how to abstract the contents of the enumeration books on to working sheets, and on the 14th the work began in real earnest. Other men were taken on from day to day, and by the end of the month the sanctioned establishment of 225 men had been entertained; there were, however, many more than this upon the books in the course of the month, as some men were dismissed from time to time for incapacity; others resigned their employment, and new candidates were taken on as vacancies arose. Yet the number of men actually at work was always below the sanctioned establishment, owing to the daily absence of some or other of them for various reasons. Those present also were not all available for abstraction work, as it was found necessary to draft several as assistants to the Record-keeper and for other miscellaneous duties. To assist in the control and management of this establishment I was afforded the services of Mr. Ardesir Dinshaji Chinoy, Extra Assistant Commissioner, Mr. Sobarayaloo Naidoo, Tehsildar, the clerk of the Deputy Commissioner's office

All use subject to https://about.jstor.org/terms

already mentioned, and the Munserims, who, as has been explained, were not available at the beginning. The petty officers, or squad inspectors, were therefore at first selected from amongst the Abstractors themselves, and thus the number of men available for actual abstraction was further reduced. The abstraction was for the most part completed early in July in 90 working days, during which there was an average of 188 Abstractors at work each day. After that most of the men were drafted to testing work, while a few small squads carried on the remaining abstraction. The testing was very troublesome work, and was not finished until early in October. Meanwhile, in the last week of July a commencement was made with the tabulation, and this proceeded until the 10th March 1892; but in October, when the abstraction and testing was completed, the number of men was largely reduced owing to their incapacity to work at tabulation, and during the last few months there were many resignations and desertions as the men saw their temporary occupation coming to an end, and took any opportunities that arose of obtaining other employment. The average daily number of Tabulators was 11 from the 25th July until the 10th August, 25 from that date till the end of the month, then 43 until the 16th September, 57 from that date until the 5th October, and 84 thence onward until the 7th March. As the tabulation of the different registers was completed, the compilation was taken in hand, and the compilation sheets for the Tables from I to XIV A were completed by the end of October; copies or summaries of these, styled "compilation slips," were supplied to the Census Commissioner for India to enable him to fill up the tables and compare results as the work progressed. The preparation of the tables was then taken in hand, and on the 12th November the first table was sent to press, and was followed by others from day to day until the 16th December, by which date all the tables up to XV A, inclusive, had been despatched. Some of the remainder occupied much time, and the last was not completed until the 31st March 1892.

Difficulties experienced.

The chief difficulty in the abstraction office was that of obtaining good material to work with. Berar, as has been already remarked, holds a backward place in education, and good writers or computators are not to be obtained in large numbers unless high salaries are offered, and possibly not then. The Census Commissioner's estimates of work upon which the strength of the office was based were common for all India, but a Bengali Babu will work very much faster and far more accurately than a Berari, and if the work in Berar is required to keep pace with that in other provinces, a proportionately larger number of men must be employed and higher salaries must be given. In respect of the rates of pay and of the number of the establishment, it is very desirable that the hands of the Superintendent should not be tied, that is to say if it is considered of importance to bring the work to an early conclusion; if he is limited to a sanctioned establishment and a fixed rate of pay, and cannot at his discretion modify the one or the other, he must be hampered; he cannot foresee all his requirements, and I think it should be considered sufficient if he keeps within the total expenditure provided on a fairly liberal estimate. This consideration leads to another point which I may mention here, though it has no connection with abstraction. At the beginning of the operations it was suggested by the Census Commissioner that the Provincial Superintendents should for facility of reference be regarded as occupying positions of the character of Under-Secretaries to Government. For Berar especially, separated as it is from the head of its administration, I think the adoption of some such plan would have much facilitated progress. The ordinary channel of communication is too slow to admit of the disposal of most of the questions arising in the census administration, which, if not dealt with at once, possibly cannot be dealt with at all. Another of the difficulties in the abstraction office was that of combining quality with quantity of work, speed with accuracy. It was attempted to adjust

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

rewards and fines for the work turned out, but the plan was not successful. Some men would work fast and show a large outturn, and until the quality could be tested would seem to be doing well; on the other hand, others whose outturn seemed comparatively very poor did their work more carefully, with more satisfactory results in the end. Until, therefore, the quality could be tested no adjustment of fine or reward could be made, but in order that the system may have any beneficial effect it is necessary that the notification of fine or reward should closely follow the work. This cannot be done unless the testing is undertaken as the work proceeds, but it was found impracticable to carry on the testing, owing to the mistakes in the schedules which it was at first attempted to rectify by local enquiry, pending which the books had to be set aside. For instance, a book was abstracted on sheet I which dealt with the sex, age, religion, and civil condition; then it was given out for abstraction on sheet II, which dealt with education, when it was found that column 12 of the schedule was blank or improperly filled in; this required correction, and until it could be made further abstraction of the book could not be proceeded with; but in order to test the work the book must be first abstracted on all the different working sheets, and if the abstraction on some sheets is stopped for any cause those sheets which have been abstracted before the stoppage cannot be tested until after some delay. If the schedules are all properly filled in, or if only such mistakes occur as can be at once corrected under general rules, the abstraction of one book on the different sheets can proceed in regular sequence, but even then the work will require careful adjustment as some sheets are worked off quicker than others and the differing capacities of the abstractors have also to be taken into consideration. Theoretically the system appears good, but I doubt if it is a practicable one when starting a new office with raw material of unknown quality.

Successful abstraction depended a good deal upon the size of the blocks, and I found that generally a population of 200 was the maximum that could be satisfactorily worked. Where this number was exceeded mistakes invariably occurred, especially in the more complicated sheets which dealt with age-periods. The ruling of some of the working sheets was bad. This is an important matter, as bad ruling leads to incorrect totalling.

The tabulation registers were in my opinion too small; each page contained space for the entries for ten blocks, and the page totals had of course to be carried on; if each page had been ruled for twenty or twenty-five blocks the amount of page totalling and 'carrying over' would have been much reduced.

Suggestions.

As regards the schedule, I think that for a future census the requirements might be curtailed with much advantage. Sect of religion and subdivision of caste might be omitted; the distinctions between sect and religion, except in the case of Christians, and between caste and subdivision are not generally understood; the returns are largely incorrect and probably of very little value. Parent-tongue would perhaps not be required again, and the information given under this head is often of doubtful accuracy. The occupation return is to some extent unreliable and the detail probably entirely incommensurate in value with the cost of obtaining it. With regard to education, I concur with the opinion expressed at the Conference at Simla, which I was unfortunately for myself unable to attend, that the enquiry should be confined to literate and illiterate.

If, however, it is possible at the next census to limit the enquiry to a few simple heads, I would advocate the system of individual cards in place of schedule books. For each person enumerated there would be a separate card, on which would be recorded the information now set down in a book. The advantage of cards is the simplification in the abstraction of the contents. To merely

All use subject to https://about.jstor.org/terms

count the cards is to arrive at the total population; to divide them into two packets and to count these gives the numbers of each sex; to deal each of these again into three heaps is to separate the married, unmarried, and widowed; to ascertain the education it is only necessary to divide these again and sum up the results; and so on. With a little practice the cards can be dealt with rapidity and accuracy, and it is easier to count the number of cards in a pack than to total up the same number of strokes on a sheet of paper. The only objection to the system is, I believe, the danger of cards being lost, but under proper precautions this might be guarded against.

Assuming, however, that the present system is again adopted, I would recommend that there should be no haste in commencing abstraction. A month or so spent at the commencement in putting the books into proper order and in teaching, examining, and finally selecting the men would be more than made up within the year. When the books are collected at the tehsili they should be thoroughly examined there and all omissions and mistakes rectified by the Supervisors and Enumerators concerned, who might be required to attend pending the inspection of their books. The Tehsildars, or other specially deputed officers, should be personally responsible for the proper performance of this duty, and should send in the books to the abstraction office with a statement showing the revenue number and name of each village, the number of the Charge (if Charges are retained), of the Circle and of the Block or Blocks which the village comprises, the number of books used for each Block, and the numbers of the males and females and of the houses recorded. The last three items would be obtained from the abstracts and would afford a useful check in the Census Office. A fortnight might be allowed for this work and another week for the despatch and carriage of the books, so that within three weeks from the census the whole of the books should be at the Census office; the dockets being complete, they could be at once registered and sorted, and by another week they would all be arranged and ready for issue. Meanwhile candidates for employment should be taught the work of abstraction in small squads, and for this purpose copies of the preliminary record of some blocks should be provided; after a few days' practice the candidates should be examined by requiring them to abstract specific books and noting the time occupied and testing the results. Those who give satisfaction would be retained and the rest dismissed, and thus by the time the books are ready to be dealt with an establishment of qualified men would be prepared to cope with them.

These recommendations have reference of course to the treatment of the census returns in a local office, but I venture to suggest that the most efficient and economical plan for the preparation and publication of census statistics would be the establishment of a permanent Census Office for all India. Much of the time and, therefore, money, spent upon the preparation of the tables under the present system is due to the inexperience of the working establishment, which entails a slow rate of work with inaccurate results and the consequent necessity of doing it over again. Remarkable rapidity and accuracy can be attained after some training and practice, but in a temporary office the work is completed by the time these qualities are acquired. In a permanent office a comparatively small number of men would work with more expedition and precision and would turn out the results from time to time with the regularity of a machine. Such an office would not be suitable for dealing with the returns of a decennial synchronous census, but there seems no necessity for any further simultaneous enumeration, and different portions of the empire could be dealt with in turns, so that the census of each would be taken at least once in ten years. The cost under this plan would not only be probably less than it is now, but it would be spread over a much longer period.

Cost of the undertaking.

It now only remains to state the cost of the undertaking and a detailed account of the expenditure is furnished on the next page. The expenditure shown for the current year is approximate only and subject to revision, but it includes all that has been incurred up to the time of writing together with some small estimated sums which may be expended before the date of closing the work; the only important item that remains to be added is the cost of the publication of this report against which must be set off the proceeds of its sale. The total expenditure has been ₹45,315, of which ₹3,586 have been incurred on account of the enumeration and the abstraction and tabulation of the records of Secunderabad, the Hyderabad Residency bazars, the stations of the Hyderabad Contingent, and the railway population within the Nizam's dominions. The total expenditure for Berar has been ₹41,728, of which nearly ₹494 has been contributed from municipal funds. Against this sum must be set off ₹351 recovered by the sale of unused schedules, furniture, and waste paper. The net cost has, therefore been ₹41,377, but as this sum includes an item of ₹484 on account of the purchase of an arithmometer, which is now to be made over to the Commissioner, Hyderabad Assigned Districts, I may take credit on paper for the odd ₹377 for this transaction, and this reduces the expenditure to ₹41,000, which amounts to a very little more than ₹1-4 per thousand of population. The cost of the actual enumeration was only ₹4,454 or ₹1-8 per thousand.

On the services rendered by the officers in the abstraction office, I have already addressed the Commissioner, Hyderabad Assigned Districts, but I may here in conclusion repeat my sense of indebtedness to Mr. Ardesir D. Chinoy for his able and indefatigable assistance.

APPENDIX.

SELECTIONS FROM GENERAL INSTRUCTIONS ISSUED TO DEPUTY COMMISSIONERS.

Circular No. 1.

Under the instructions of the Census Commissioner for India I have the honour to request that you will be so good as to take in hand at once the administrative arrangements of your district for the ensuing Census, which will be taken on the night of the 26th February 1891.

2. The operations will be based on the lines of those for the Census of 1881, and I beg to invite your attention to Mr. Kitts's Report upon that undertaking.

3. As in 1881, the Taluk will be the basis of area upon which the scheme is to be framed. Each Taluk should be divided into a number of *Charges*; each *Charge* into a number of *Circles*; and each *Circle* into a number of *Blocks*.

4. The Taluk arrangements will be in charge of the Tehsildar under your immediate control. Each *Charge* will be placed in charge of a *Charge-Superintendent*; each *Circle* in charge of a *Supervisor*; and each *Block* in charge of an *Enumerator*.

5. The Charges and Circles should be generally the same as those adopted in 1881, the record of which it is presumed is in your office. Some of them may, however, require re-adjustment, especially in the case of towns where there has been any large variation of population.

6. Should you have no record of the arrangements for the last Census it will be necessary for you to form the divisions afresh. In this case you should be guided (1) by the Police subdivisions of the Taluk, a Police Station range forming a convenient area for one or more complete Charges, and (2) by the average number of houses to a Circle adopted at the last Census, which you will find detailed in Table No. 1, page 1, of the Census Report.

7. Having formed Charges and Circles, it will be necessary to demarcate them on a map. If the maps in use for the last Census are forthcoming, they will, with some correction perhaps, serve again; if not, a map should be prepared for each Taluk on a scale of one inch to a mile, and on these the outlines of the Charges should be traced in thick lines and outlines of the Circles in dotted lines, in red ink. Each Charge should be given a serial number in the Taluk, and each Circle a serial number in the Charge, and the number should be marked upon the map, also in red ink, Roman figures being used to distinguish the Charges.

8. Having put the preparation of these maps in hand, you should proceed to appoint the Charge Superintendents and Supervisors. For these the same agency should be used as in 1881. Tables 2 and 4, pages 2 and 3 of the Census Report, show the classes from which these officials were drawn on that occasion. It is desirable that the Supervisors should, if possible, be selected from residents in the Circles to which they are appointed. The Charge-Superintendents should generally be Government Officers whose activity and intelligence can be thoroughly relied upon.

9. When the appointments are made each Charge-Superintendent should be given a copy of the map showing the extent of his Charge and a list of the villages in it; and each Supervisor should be given a list of the villages in his Circle, or where in the case of a town or large village a portion is only allotted to him, a description of the area entrusted to him.

10. It will then be the duty of each Charge-Superintendent to go over his Charge with the Supervisors of the respective Circles and test the map on the ground, and to make a report of all villages marked on it which have ceased to be inhabited and of all new villages which have been omitted. The Taluk maps should then be corrected by these reports, and a tracing of the corrected maps be supplied to this office.

11. Meanwhile it will be the duty of the Supervisors under the general direction of the Charge-Superintendents to split up their Circles into Blocks.

12. In the formation of Blocks the Supervisors should be guided by the following rules:—

(1) Each Block should contain from about 40 to 50 houses. If necessary, the number may be increased to 60, but should not exceed that limit.

(2) By the term "a house" is meant "a dwelling-place of one or more families with their resident servants, having a separate principal entrance from the common way."

(3) Stables, sheds, out-houses, etc., which are not ordinarily used as dwellings are not to be reckoned as separate houses.

(4) In forming Blocks villages must not be mixed up; that is, two villages or parts of two villages, however small, must not be thrown into the same Block.

This content downloaded from
14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

13. When the Blocks have been formed, the Supervisor should submit a report showing the number of houses in each village, or where he has only a portion of a village the number in the area, the number of Blocks in the Circle, a brief description of the area of the Block sufficient to identify it, and the number of houses in each block.

14. Upon the receipt of these reports you will be in a position to check the general distribution.

15. The above scheme refers to your district generally. Where Municipalities exist similar arrangements should be made, but their area should be excluded from that of the Taluk for administrative purposes, and the Municipal Committee should represent the controlling authority immediately subordinate to yourself.

16. These preliminary arrangements should be completed with as little delay as possible.

Dated the 10th May 1890.

Circular No. 3.

I have the honour to request that you will furnish me before the end of this month with a statement in the accompanying form, which is described as the *Subdivisional Register*, for each Taluk in your District.

The names and figures entered upon the form are given as examples of the way in which it should be filled up.

The entries in column 4 should be checked with the Tehsilwar Register so as to ensure that no villages have been omitted.

Dated the 10th June 1890.

TALUK AMRAOTI—CONSISTING OF 4 CHARGES.

SUB-DIVISIONAL REGISTER.

Charge No. 2 under Charge-Superintendent Ram Rao, Inspector of Police, consisting of 8 Circles.

1	2	3	4	5	6	7	8	9
Serial No. of Circle.	Name, occupation, and residence of Supervisor.	Names of villages in the Circle.	No. of village in Tehsilwar Register.	No. of houses in each village.	Description of limits of Circle when it does not include the whole village.	No. of Blocks in each village.	No. of Blocks in each Circle.	REMARKS.

4								

Circular No. 4.

I have the honour to request you to furnish me with an indent for the supply of Schedules that you will require for your District.

2. Each house will require a separate Schedule, and each Schedule will contain space for the enumeration of eight persons only, so that it will be necessary to have two or more Schedules for each house containing more than eight persons. It is believed, however, that there will not be many instances of such large households if the definition of a house given in Circular No. 1 has been strictly applied in the preparation of Blocks.

3. The Schedu will be bound in books, and there will be a separate book, or books, for each Block.

4. It is proposed to bind the books in numbers of 10, 30, 50 and 70 Schedules. The first size of 10 Schedules is intended for those villages which contain only a nominal number of houses, and also for the supply of subsidiary Schedules where such may be required owing to spoilage and waste. The other sizes are intended for Blocks containing, respectively, from 10 to 25 houses, from 26 to 45 houses, and from 46 to 60 houses. In each case a margin has been allowed for supplementary requirements.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

5. You will also require a certain number of separate *Householder's Schedules*. These are prepared in English only and are intended for the use of Europeans and Eurasians and such native gentlemen of position as know English and will undertake to fill them up.

6. In this connection I have to add the following instructions on the preliminary organisation.

7. All jails, hospitals, Police barracks, religious institutions, and other establishments where there are a large number of residents, should be made into separate Blocks, and a note of all such Blocks should be made in the column of remarks in the Sub-divisional Register.

8. In the case of officers' bungalows, etc., where servants reside in separate and detached houses, each such house will be reckoned separately, and the Householder's Schedule will be provided for the principal occupier of the premises and those actually resident under his own roof only.

9. Railway premises and any houses upon them are not to be included in the arrangements for the Taluk.

10. The indent you are now asked to prepare should show in tabular form how many of each class of Schedule Book and how many Householder's Schedules you will require, with full instructions as to where and how you desire them to be despatched. It should be furnished as soon as practicable and at latest by the end of August, and I have to request your particular attention to its punctual transmission.

Dated the 24th July 1890.

Circular No. 5.

I have the honour to inform you that the sum of R is allotted to your District on account of contingencies in connection with the Census. This amount is intended to meet all expenditure necessarily incurred on account of the Census, such as the preparation of maps, house numbering, lights, red ink for the final record, and petty stationery for the use of the non-official staff.

Amraoti	475
Akola	500
Ellichpur	300
Buldana	450
Wun	425
Basim	400
TOTAL	2,550

2. The expenditure should be carefully regulated, as while the items will be small individually the numbers will be large.

3. There need be little or no expenditure for lighting. On the final Census night there will be moonlight, and each householder should provide a light for the enumerator to read and write by at his visit. At the last Census the expenditure on this account was excessive while in only one other province in India was any incurred at all.

4. The expenditure should be included in your ordinary district contingent bills debited to Census, and an account should be transmitted to this office at the close of each month showing the total expenditure under each head.

5. No fixed allotment can be made to meet the cost of carriage and distribution of Schedule books, etc., but any expenditure on this account that is actually necessary may be incurred and debited in the same way.

6. No expenditure on account of payment of enumerators may be incurred without special sanction.

7. In Municipalities the expenditure should be met from municipal funds, and should not be included in the district charges.

Dated the 3rd September 1890.

Circular No. 6.

I have the honour to advise the despatch to you under another cover of copies of a Census Manual in English, and to request that you will be good enough to acknowledge their receipt.

2. The Manual is intended to cover general instructions for all officers up to the taking of the Census.

3. The present copies are for distribution to all District Gazetted Officers who know English, and to Municipal Committees.

4. Copies in Marathi are in course of preparation and will be forwarded as soon as they are ready. These are for distribution to all Charge-Superintendents and Supervisors and to such Gazetted officers as do not know English.

5. Forms of certificates of appointment for Supervisors and Enumerators will be supplied to you.

Dated the 5th September 1890.

Census Manual for Berar.

1. The following is a sketch of the general scheme of operations. Each Taluk and Municipality having been divided into Charges, Circles, and Blocks, and Charge-Superintendents and Supervisors having been appointed, the next steps to be taken will be the numbering of the houses and the preparation of lists of men for appointment as Enumerators. When this has been done, Village lists will be prepared in a prescribed form. The Schedule books will then be distributed and the Block lists prepared and entered in the books. On the 15th January the Enumerators will commence the first round or preliminary record, going from house to house and filling up the Schedules in accordance with their instructions. This will be completed by the 1st February, and during this period and the interval before the final Census night, the Enumerator's work will be checked. On the night of the 26th February they will go round their entire Blocks, correcting to date the record they will have already made. In certain special tracts of the country this will be done on the next day. After the second round the Schedules will be finally tested and the records collected.

2. House numbering will be taken in hand at once on receipt of these instructions and should be completed by the 15th October at latest.

It will be the duty of the Supervisors to number the houses. It will be done with such material (inexpensive) as Deputy Commissioners may direct. A mixture of charcoal and lamp-oil makes a good pigment; there need be no attempt at permanency, as it is only requisite that the numbers should last until the 31st March, before which their removal is forbidden under the Census Act.

A separate number must be given to every house which is used or intended for human habitation. A house has already been defined to be the "dwelling-place of one or more families with their resident servants having a separate principal entrance from the common way." The "common way" is not necessarily a public way: thus the servants' quarters attached to a bungalow have not generally a separate entrance giving on to the public way, but as they have separate entrances from the common way, that is, the way common to each, it follows that each is a distinct house. Separate numbers will not be given to stables, out-houses, etc., which are not used as dwellings. Ruined houses may be omitted, but houses in course of construction and likely to be completed before the Census night should be numbered.

If there is any difficulty in painting the number, as in the case perhaps of a grass chupper or of a house under construction, it can be written on a piece of paper, or painted on a large stone, or a board, etc., and given to the occupier to keep or to attach to the house.

The numbers must be serial for the whole village and consecutive for each Block; and the numbering of one Block must be completed before that of the next is commenced. Ordinarily the last number of the last Block will show the total number of houses in a village; thus in a village of 150 houses consisting of three Blocks of 50 houses each, the first Block will be numbered from 1 to 50 the second from 51 to 100, and the third from 101 to 150. In the case of large villages and towns consisting of two or more Circles the numbering of the first Circle must be completed before that of the next is commenced. In Municipalities divided into wards the numbers may be serial for each ward. In these cases the Charge-Superintendents will direct the process and see that there is no delay in continuing the numbering from one Circle to the next.

Supervisors must be very careful in carrying out this work. Before painting the numbers they should make a preliminary round and roughly number the houses with dry charcoal or chalk or some substance which will easily rub off; and then having carefully checked them and corrected any mistakes they should proceed to paint the numbers finally.

If, subsequently to this process, it is found that a house has been omitted, or a new house not calculated for constructed, it should be given the number next to it with a letter attached; thus a house omitted between No. 46 and No. 47 would be numbered 46 A. Such houses must not be forgotten in the abstraction; *vide* paragraph 13.

3. Having completed the house-numbering Supervisors will give a serial number to each Block in their Circles and prepare their Village Lists showing the serial numbers of the Blocks, the serial numbers of the houses in each Block, and the names of the proposed Enumerators. Where the Blocks are very small and two or more are so close together that one man can visit all the houses in them in one evening, a separate Enumerator need not be appointed to each. Jails, hospitals, and other institutions which have been treated as separate Blocks will be enumerated by the Officer or other person in charge. Such buildings will not be numbered. The Village Lists on completion should be sent in to the Deputy Commissioner without delay, and at latest by the 20th of October.

4. Supervisors will then prepare their Block Lists, putting down each house as it is numbered with its description and the name of the principal occupant. At the foot of the list they will enter any mango-topes, encamping grounds, etc., within the Block where travellers halt and may be found on the Census night. No numbers will be given to these places. They will also note in the column for remarks the houses where private or Householder's Schedules are to be left.

5. When the Village Lists have been finally approved by Deputy Commissioners, and Enumerators appointed, the Schedule books will be distributed. The distribution should be arranged so

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

that the books may reach the Supervisors by the 15th November. Tehsildars will keep an account of all books issued to each Charge-Superintendent and see that they are returned after the Census. Similarly Charge-Superintendents and Supervisors will keep an account of their receipts and issues. The most careful attention must be given to this duty. Each officer in turn will fill up the entries in the Docket on the cover of the books, so far as is applicable, as they pass through his hands.

6. On receipt of the Schedule books Supervisors will enter in them on the page provided a copy of the Block Lists they will have already prepared, and deliver the books to the Enumerators by the 1st December. The Block Lists will be a guide to the Enumerators of the houses and places they have to visit. Supervisors will direct them to go round their Blocks and satisfy themselves that the lists are complete and that no houses have been omitted; if there are any mistakes or if any alterations take place before the 26th February, it will be their duty to bring them to the notice of the Supervisors and to have their lists corrected accordingly. During the interval before the 15th January the Enumerators will be expected to learn the Instructions printed in the Schedule Books and take care to ascertain thoroughly what they have to do and how to do it. They will also be required to practise enumeration by filling up rough forms of Schedules on plain paper which the Supervisors will examine and subsequently destroy. If there are any doubtful points not provided for in the Instructions they should ask about them at once. Supervisors will convey the above directions to the Enumerators.

7. On the 15th January the preliminary record will be commenced, and Supervisors should arrange to accompany each Enumerator to a few houses and to see him fill in the entries in the Schedules, on that or the next day.

8. During the week before the 26th February the Householder's Schedules will be distributed, through the Enumerators, to such houses as Deputy Commissioners may direct.

9. Officers in camp will be required to enumerate the entire party with them, and for this purpose will obtain beforehand the requisite Schedules from the Deputy Commissioner direct, and return them completed the next day to the Supervisor of the area in which the camp is situated, taking a receipt.

10. If any fairs are being held on the 26th February, Deputy Commissioners will make special arrangements for their enumeration, treating them as separate areas the returns of which are to be kept apart from those of the ordinary residents of the locality.

11. If any troops are on the march, Deputy Commissioners will arrange for their enumeration as in the case of Officers in camp.

Final Census.

12. On the night of the 26th February Enumerators will go their final rounds in accordance with their detailed instructions. Supervisors will be expected to visit every Block in their Circles and ascertain that Enumerators are doing, or have done, their duty. Charge-Superintendents will assist Supervisors in this respect as far as possible.

Supervisors will see before hand that each Enumerator is provided with red ink for this occasion, They should also warn all householders to have lights ready at their houses to enable the Enumerators to do their work.

If at the first round any difficulty is experienced by a Hindu Enumerator in the case of Mahomedan families, or if any such difficulty is anticipated on the final night, the Supervisor should arrange for an influential Mahomedan to accompany the Enumerator to such houses.

13. Testing.

On the morning of the 27th February Enumerators will fill up their Abstracts, and join their Supervisor at a time and place to be named by him. The Supervisor will then cause each Enumerator's book or books to be separately abstracted by two other Enumerators, one after the other. Any mistakes found will then be enquired into and corrected. When they have all been tested and corrected the Supervisor will sign the certificate at foot of the Abstract and fastening all the books together take them in to the Charge-Superintendent. He in turn will check the number of books, sign the dockets, and from the Abstracts in each book compile a similar Abstract for his Charge, and then take all on again to the Tehsildar.

Further instructions on this head may be issued hereafter.

14. General instruction.

Deputy Commissioners and their Assistants and Tehsildars should hold meetings of Census Officials and go through the Instructions and Rules clause by clause, so that there may be no misunderstanding. Practical experience will be gained by filling up the Schedule entries in a rough form for any of the persons present.

15. Checking.

Many opportunities will occur to Officers of all Departments and all grades when moving in camp in the cold season to assist in the very necessary and important duty of checking the work of the Census Staff. Deputy Commissioners should give their Assistants special instructions in this respect.

In the preliminary stages it can be seen whether houses have been properly numbered or whether there are any omissions; Village and Block Lists can be examined; Supervisors and Enumerators

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

questioned. From the 15th January when the enumeration commences the work should be everywhere daily examined, by Supervisors, Charge-Superintendents, Tehsildars, Taluk Officers, Police Officers, Deputy Commissioners, and any others who can; and it should be seen that the entries in the Schedules are strictly in accordance with the instructions. Obvious errors should be at once explained and corrected, and doubtful points referred.

16. Changes.

Any changes made in the Census Staff should be entered in the lists and Registers and duly reported to offices concerned.

A reserve list should be kept of men available for any of the posts which may become vacant before the Census night. Supervisors especially should have one or two men ready at hand on the Census night in case any Enumerator should fail at the last moment.

17. Certificates of appointment will be given to all Charge-Superintendents, Supervisors, and Enumerators. Those who are not so supplied should apply for them.

18. Appended is a copy of the Instructions to Enumerators, which should be carefully perused by all Superintending Officers.

Also a specimen schedule showing a variety of entries which will serve as guide in doubtful cases.

Also lists* of the chief sects of religion and subdivisions of castes to be found in Berar.

* Omitted.

APPENDIX I.

Instructions to Enumerators.

A.—The first Round. (Preliminary record.)

1. Beginning from the 15th of January 1891, you will visit every house in your block to which a separate number has been affixed, in the order in which they are entered in the list in your book, and enter in the schedules in that book every person residing in those houses in the manner prescribed below.

2. You must use black ink, and write very clearly in the character you know best; and write between the ruled lines.

3. You must take a fresh page for each house. If there are more than eight persons in a house you should continue the entries for that house on the next page, repeating at the top of that page the number of the house in question, with the word "continued" after it in brackets. You must never begin the entries for a fresh house in the middle of a page, but should leave the unused lines blank.

4. If the entry for any person in any of the columns of the Schedule be the same as that for the person entered on the line above, you must repeat the entry and never write the word "ditto" or make dots.

5. If one of the houses on the list be found unoccupied, you should write the word "empty" after the number of that house on the top of the form.

6. You are to enter all persons who ordinarily live and take their meals from the house, even though any of them may be, at the time of your visit, absent for a short time at the bazar, town, watching crops, fishery, or even for a few days at a wedding, or on a pilgrimage, provided they are to be back at the house before the 26th February. After the residents you should enter the visitors, if any, stopping in the house, but not such as are only there for a day or two, as for a wedding, etc., and will not remain there till the 26th February. In dharmshalas, serais, or temples, you should enter on this occasion only those who usually live there and not travellers, etc., stopping only a day or a night or so in the building.

7. Before beginning to make these entries you must read carefully the rules for filling up each column which are printed on the next page and also the specimen schedule on the page opposite those rules. Read also the standard questions printed at the back of the specimen schedule. These questions indicate the main points on which enquiries are to be made, but if the answers given do not contain the information required according to the Rules additional questions must be asked.

8. You should point out to the Supervisor entries about which you are in doubt and receive his instructions. You must have completed all the entries in your block by the 1st of February 1891.

B.—The Second Round. (Final record.)

9. At nightfall on the 26th February 1891, you will take this book as already filled in and again visit every house in your block in order, taking red ink with you.

10. You must summon the chief member of each family residing in the house, and read over to him the entries made for his family in the schedule. You will strike out the entries for persons who are not present, and fill up the form for any person now in the house who was not there when the first visit was made, such as guests, infants newly born, and others. You are to consider as present all living in or taking their meals from the house, even though any of them may be out fishing or watching in the fields or at a shop, etc., for the night.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

11. If there be no room left on the schedule for the fresh entries above mentioned, you must take a fresh page at the end of your book, and enter on it the house number with the word "continued" after it, as prescribed in paragraph 3 above.

12. Before you start on your round you must see that you are yourself enumerated in the house where you are stopping.

13. You must make no alteration whatever in any entry against the name of any person unless you have to strike out the entries altogether because he or she is no longer present. When you strike out a person, you must draw the line completely through all the entries following that person's name and not merely through column 1.

14. You must use only red ink for entries and erasures made on the round on the 26th February.

15. Whilst going on this round you must visit every house marked "empty" in your book to see whether any person is now living there, and if you find any you must enumerate them.

16. After visiting as above all the dwelling houses, you must go to the dharmshalas, serais, encampments and landing places, where travellers rest for the night, and enter all particulars in the schedules for the way-farers, boatmen, pilgrims, etc., you may find there, and strike out the entries already made against persons who are not now persent. You should ascertain from the village watchmen if any wandering gang, etc,, has come to pitch in your block, and if there be any such you should go and enumerate it as above prescribed for other persons.

17. After your book has been inspected by the Supervisor you will prepare the short abstract printed on the back of the specimen schedule in it, as directed by the Supervisor, and he will not take charge of your book until he has certified it to be correct.

18. According to the Census Act every person is legally bound to furnish you with such information as is necessary for filling up the schedule; but you are forbidden to ask for any information not required for the purposes of the Census. Any Enumerator detected in extorting money on any pretext connected with the Census renders himself liable to punishment under the Census Act or the Penal Code.

C.—Rules for filling up the Schedule.

RULE 1.—Column 1 (*Serial number and name*).—Enter first the chief resident member of the family, whether male or female, then the other members of the family and their resident servants, if any, and lastly, visitors or temporary residents. If there be any objection made to giving the name of a female, write the word "female" in this column (with her relationship to some member of the household).

If an infant has not yet been named, enter the word "infant." The serial number must not be added till the final record.

RULE 2.—Column 2 (*Religion*).—Enter here the religion which each person returns:—As Hindu, Mussalman, Jain, Christian, Parsi. Forest tribes who are not Hindus, Mussalmans, etc., should have the name of their tribe entered in this column, as Bhil, Gond, Korku, etc.

RULE 3.—Column 3 (*Sect of religion*).—Enter the sect of religion followed by each person as they return it:—As Smarth, Vaishnav, Manbhao, Nath, Bairagi, Lingaiat, etc., for Hindus; Sunni Shiah, etc., for Mussalmans; and for Christians enter whether Church of England, Roman Catholic, Presbyterian, Lutheran, Baptist, etc. If the sect cannot be stated, enter "not returned" in this column, but do not leave it blank.

RULE 4.—Column 4 (*Caste, etc.*).——Enter the caste of Hindus and Jains, and the tribes of those who have not castes, and the races of Christians, Buddhists, etc,:—As Brahman, Rajput, Bania, Kunbi, for Hindus; Pathan, Moghal, etc., for Mussalmans; Eurasian or Native Christian for Christians. Do not enter vague terms, such as Hindustani, Marwari, Marathi, Panjabi, etc.

RULE 5.—Column 5 (*Subdivision of Caste, etc.*).—If the caste has been entered in column 4, enter here the subdivision, as Maharastra, Kanujia or Nagar of Brahmans, Osval of Banias, etc. If tribe, enter the clan; such as Tadwi, Pawada, etc., for Bhils; if race, enter the tribe or nationality, as English for European.

Some races or castes may not return subdivisions, and in their case the entry in column 4 should be repeated, but this column must not be left blank. Native Christians, for instance, may be returned as Portuguese, East Indian, Madrasi, or by their caste, if recognized.

RULE 6.—Column 6 (*Male or Female*).—Enter here each person as either male or female, even though you have written the word "female" in column 1 already.

RULE 7.—Column 7 (*Age*).—Enter the number of years each person has completed. For infants less than one year old, enter the word "infant."

If a person cannot state his or her age exactly, the enumerator should ask the relations, or if the person be present, make a guess at the age from the appearance. He must never insist on seeing any female who is not voluntarily produced before him.

RULE 8.— Column 8 (*Marriage, etc*).—Enter each person, whether infant, child, or grown up, as either married, unmarried, or widowed. This column must not be left blank for any one of whatever age.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Children who have been married should be entered as married, even though they may not have begun to actually live with their wives or husbands. Persons who have been married, but have no wife or husband living, should be entered as widowed.

RULE 9.— Column 9 (*Parent-tongue*).—Enter the language which each person returns as ordinarily spoken in the household of his parents.

RULE 10.—Column 10 (*Birth-place*).—Enter the district in which each person was born, and if the person be not born in Berar add the name of the province or state to the district of birth.

If the person be born out of India, enter the country, as China, Kabul, Ceylon, etc. The names of villages, tehsils, etc., are not to be given.

RULE 11.—Column 11 (*Occupation or means of subsistence*) [*Read this rule very carefully and ask the Supervisor about all cases which seem doubtful to you.*]—Enter here the exact occupation or means of livelihood of all males or females who do work or live on private property, such as house-rent, pension, etc. In the case of children and women who do no work, enter the occupation of the head of their family or of the person who supports them, adding the word "dependent," but do not leave this column unfilled for anyone, even an infant. If a person have two or more occupations, enter only the chief one, except when a person owns or cultivates land in addition to another occupation, when both should be entered.

No vague terms should be used, such as "service," "Government service," "shop-keeping," "writing," or "labour," etc.; but the exact service, the goods sold, the class of writing or labour must be stated. When a person's occupation is connected with agriculture it should be stated whether the land is cultivated in person or all let to tenants; if he be an agricultural labourer, it should be stated whether he be engaged by the month or year, or is a daily field-labourer. Women who earn money by occupations independent of their husbands, such as selling firewood, cow-dung cakes, grass, or by rice-pounding, weaving or doing house-work for wages, should be shown under those occupations. If a person makes the articles he sells, he should be entered as "maker and seller" of them. If a person lives on alms, it should be stated whether he is a religious mendicant or an ordinary beggar. When a person is in Government, Railway, or Municipal service, the special service should be entered first, and the word Government or Municipal, etc., after, as clerk-Government, sweeper-Municipal, labourer-Railway.

If a person be temporarily out of employ, enter the last or ordinary occupation.

RULE 12.—Column 12 (*Instruction*).—Enter in this column against each person, whether grown up, child, or infant, either learning, literate, or illiterate. Enter all those as learning who are under instruction either at home or at school or college. Enter as literate those who are able to both read and write any language, but are not under instruction as above. Enter as illiterate those who are not under instruction, and who do not know how to both read and write, or who can read, but not write, or can sign their own name but not read.

RULE 13.—Column 13 (*Language known by literate*).—Enter here the language which those shown as literate in column 12 can both read and write. and if a person knows how to read and write English, as well as a Vernacular, enter "English" also.

This column is to be left blank for those shown in column 12 as learning or literate, and except when English is known, only one language, that best known, should be entered.

RULE 14.—Column 14 (*Infirmities*).—If any person be blind of both eyes, or deaf and dumb from birth, or insane or suffering from corrosive leprosy, enter the name of the infirmity in this column.

Do not enter those blind of one eye only, or who have become deaf and dumb after birth, or who are suffering from white leprosy only.

Circular No. 7.

I have the honour to forward by copies of the forms of Village List and Block List referred to in paragraphs 3 and 4 of the Census Manual, for distribution to all Supervisors in your District.

2. The Village List will show the constitution of the Circle and its personnel, and will be a guide to any Inspecting Officer and to any one appointed to replace a Supervisor on an emergency. Columns 1 and 2 of this form should be filled up in your Office from the Subdivisional Register before distribution. The Supervisors will fill in columns 3 and 4 and submit the lists to you for approval, and on approval they should be returned to the Supervisors.

3. The Block List will give a detailed description of each Block. It should be prepared by the Supervisors and be submitted to such approval as you think fit.

4. Specimen copies showing how the forms should be filled up are enclosed herewith.

Dated the 7th September 1890.

VILLAGE LIST.

Vide *Section 3 of the Berar Census Manual for 1891.*

TALUKA—AMRAOTI; CHARGE NO. 2; CIRCLE NO. 1.

Supervisor—Luxman Turerao, Deshmukh of Murtazapur.

Names of villages or description of Circle as given in column 6 of the Subdivisional Register.	Serial number of Block in the Circle.	Serial numbers of the houses in each Block.	Name, occupation, and residence of the Enumerator.	REMARKS.
1	2	3	4	5
Ramapur	1	1 to 40	Krishnarao, Patwari of Ramapur.	
	2	41 to 89	Ram Chandra, Schoolmaster, Ramapur.	
	3	90 to 134	Tukaram, Stamp-vendor of Ramapur.	
	4	135 to 177	Sadashiv, Gumasta of Ramapur.	
	5	178 to 220	Chandrabhan wd. Punjaji, Agriculturist of Ramapur.	
Wadali	6	1 to 47	Bakaram, Patel of Wadali.	
	7	48 to 101	Kisan, Compounder, Amraoti Camp.	
	8	102 to 150	Narayan, Petition-writer, Amraoti.	
Ashti	9	1 to 40	Daryaji, Gumasta-Patwari of Ashti.	
	10	41 to 80	Balmukund, Shroff of Ashti.	

NOTE.—In this suppositious Circle there are three villages containing respectively 5, 3, and 2 Blocks. From columns 3 and 7 of the Subdivisional Register, columns 1 and 2 of this list can be filled up. It should be noted that the number of Blocks is serial for the whole Circle, but the numbers of the houses serial for each village. When house numbering is completed the Supervisor can fill in column 3.

BLOCK LIST.

VILLAGE OR QUARTER—WADALI, BLOCK NO. 6; BOOK NO. 1; CIRCLE 1.

Description of the Block, *e.g.*, village, pura, road, etc.	HOUSES.		FAMILIES IN EACH HOUSE.		REMARKS.
	Serial No.	Description, *i.e.*, whether a dwelling-house, shop, serai, etc.	Serial No.	The name of the head of every family.	
	1	Dwelling-house	1	Kishen Patel.	
	2	Ditto	1	...	
	3	Shop	1	...	
	4	Temple	1	...	
	5	Lodging house	1	...	
	...	...	2	...	
	...	...	3	...	
	6	Serai	1	...	
		etc., throughout the Block.			

NOTE.—The Block number above will correspond with that given in column 2 of the Village List and the Circle number will be that of the Circle in the Subdivisional Register.

Circular No. 9.

In continuation of para. 13 of the Census Manual, I have the honour to issue the following further instructions.

2. When the Supervisors reach the Charge-Superintendent with their Enumeration books they should at once prepare from the Enumerator's Abstracts a summary of the items for their respective Circles, and the Charge-Superintendent should then cause each Circle summary to be separately totalled by a second Supervisor. When the summaries have thus been tested and, if necessary corrected, the Charge-Superintendent will prepare a summary for his Charge in the following form :—

DISTRICT. TALUK. CHARGE No.

Circle.	Occupied houses.	Population.			Remarks.
		Male.	Female.	Total.	
1	2	3	4	5	6
Charge No. Total					

Tested and submitted to the Tehsildar on the _____ of _____ 1891.

(Signed) _____

Charge Superintendent.

3. On receipt of the Charge Abstracts and books the Tehsildar should prepare a summary for the Taluk in a similar form putting Taluk for Charge and Charge for Circle, and transmit it at once to you.

4. Officers in charge of the enumeration in Municipalities should submit to you similar summaries for those areas.

5. You should then prepare a District Summary in the same form showing the totals for Taluks, Municipalities, Railway Circles (which will be communicated by the Railway authorities), troops on the march, camps of officers on tour (which are to be considered as forming part of the head quarters of the District and should not be entered in the Charge Summaries), fairs, and any other special areas not included in the Taluk returns.

6. When the totals are complete you should telegraph the results to the Census Commissioner at Simla and to the Provincial Superintendent in the following concise form :—"*Houses*——. *Males* - --. *Females*——. *Total*"—. You should also transmit by post to the above officers detailed summaries showing totals for Municipalities (Cantonments) and Rural areas, and grand total.

7. It is hoped that you will be good enough to see that no delay occurs in the preparation and submission of these summaries; I would also ask your special attention to (*a*) the testing of the original addition by the enumerators, and (*b*) the inclusion of the miscellaneous schedules such as those for camps, etc., which may be overlooked.

Dated 30th October 1890.

Circular No. 10.

With reference to your letter No. , dated , I have the honour to convey the following remarks and instructions regarding the Census of travellers.

2. The arrangements already prescribed provide for the Census (1) of persons who on the night of the 26th February will be found at their homes and of their visitors, (2) of those who are temporarily absent in the fields, etc., (3) of those who as travellers halt for the night at recognised camping grounds, etc., and (4) of those who travel by railway. It remains only to provide for those who may travel by road through the night or who may halt temporarily at unknown places.

3. It appears that it may be regarded as certain that travellers on the village roads between sunset and sunrise will be only those who shortly after sunset are returning home or who shortly before sunrise are starting on a journey. Both of these classes will be found at their homes during the night and should be enumerated there. Travellers on the village roads may therefore be disregarded.

4. On the main trunk roads however through travellers will be found. Every portion of these roads lies within the boundaries of some village, and the village authorities should be directed to post

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

men an hour or so after sunset at one or more spots, as may be necessary, on the road with instructions to put to all passers by the following questions:—

First.—Have you been enumerated to-night? (The preliminary enumeration, it must be remembered, is not sufficient.)

Second—If not, do you intend to travel through the night?

Third.—If not, where do you intend to halt?

Those persons who answer the first question in the affirmative will be allowed to proceed. Those who answer the second question in the affirmative will be directed to stop where they are until they have been enumerated, and the Enumerator will be called. Those who answer the first two questions in the negative and reply to the third will be allowed to proceed to their destination and the village authorities of that place will arrange for their enumeration.

5. At the entrances to towns the municipal or other local authorities will make similar arrangements.

6. For the tracts where the final Census will be taken in the day-time on the 27th an Enumerator should be posted from sunrise for the day on the road at the boundary or limit of the tract and enumerate travellers passing *out* of the tract if they have not been already enumerated.

7. It may be necessary in some cases to appoint special Enumerators for the Census of travellers.

8. Every person who is thus enumerated on the road should be given a ticket which he can show if again questioned; and I shall be glad if you will inform me at an early date of the number of tickets that you will require.

Dated the January 1891.

Circular No. 11.

I have the honour to request that you will be good enough to furnish me before the 1st April next with a full report upon the Census Operations in your District.

2. The object of this report is to obtain for future guidance an accurate record of all the steps taken and the difficulties met with, and I would ask you therefore to favour me with a chronological narrative of the entire undertaking and to state in complete detail the action taken, with the dates in each case, upon the instructions issued from this office, the points upon which those instructions were departed from with the grounds therefor, and the difficulties experienced from time to time with your suggestions for their future avoidance

3. I append an outline of some of the subjects to be dealt with, and it will be convenient if you will treat them in the order mentioned. You will understand that the list is not intended to be exhaustive, and I shall be glad if you will touch upon every point which requires attention.

1.—Organisation:—formation of Census areas, Maps, Sub-Divisional Register, Number of Charges, Circles, and Blocks as finally revised, average number of houses per Block in towns and villages.

2.—Agency:—number of Charge-Superintendents, Supervisors and Enumerators, and classes from which drawn.

3.—House numbering:—definition of "house", how applied, mode of numbering, dates of commencement and completion, how checked. Village and Block lists.

4.—Schedules:—supply, indents how prepared, receipts, distribution. Form of Schedules, standard of books.

5.—Instruction of Agency:—mode of and extent, Manual and Circulars.

6.—Preliminary record:—time occupied in taking, extent of checking and testing, degree of accuracy of the work done.

7.—Final Census:—time occupied, extent of supervision, strength of staff, special Enumerators and reserve, traffic on road (Cir. 10), fairs and markets, marriages and festivals. Preparation of abstracts, collection of books and schedules.

8.—Special areas, municipalities, cantonments, troops on the march, tracts requiring a day Census.

9.—Legislation:—need of Census Act, and action taken under it, attitude of people.

10.—Correctness of record, opinion and reasons.

11.—Expenditure.

Dated the 10th February 1891.

EXTRACTS FROM THE INSTRUCTIONS ISSUED BY RAILWAY AUTHORITIES.

GREAT INDIAN PENINSULA RAILWAY.

Circular No. 54.

Census on the night of Thursday, the twenty-sixth of February 1891.

All concerned are advised, with reference to the instructions given in the third clause of para. two, and in the eighth para. of the Agent's Circular No. 10 of the twenty-seventh of October 1890,

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

and the last clause of para. five of the joint Circular No. 278, of the seventeenth of December 1890, as to the enumeration of Passengers and the Company's Staff who may be travelling upon this Railway on the night appointed for taking the Census, that the following instructions should be adhered to, namely :—

First.—All persons who take tickets after twelve o'clock (noon) on the twenty-sixth of February, to travel by any Train, throughout the whole line (except as hereinafter mentioned) to such places as will involve their being in the Train after twenty hours on that evening, should, as far as is practicable, be enumerated when they take their Tickets, and a Census Check Ticket should be given to each one when so enumerated.

Second.—All persons alighting from any Train throughout the whole line (except as hereinafter mentioned) after twenty hours on the night of the twenty-sixth of February, should be enumerated as they alight, provided that they have no Census Check Ticket in their possession.

Third.—Census Check Tickets should be given to each person at the time of the enumeration, except to those who are enumerated when they alight from any Train *after* six hours on the twenty-seventh of February. But a Census Check Ticket should be given to, or should be in the possession of, each one who alights *before* that time.

* * * * *

Fifth.—As far as may be possible, additional Guards and Enumerators should travel with the Trains, especially those which run for long distances, and should ride in the carriages, having with them a supply of blank returns and Check Tickets. At every convenient opportunity, that is, at the stoppages at Stations, etc., these special Enumerators should record the names, etc., of Passengers not previously enumerated, and who have no Check Ticket, and they should give a Check Ticket to each one so enumerated. By this process the numbers to be enumerated as they alight will be greatly reduced.

* * * * *

2. The following detailed instructions should be carried out in regard to passengers in the Trains that are mentioned, who may have taken their Tickets before the times named in para. one of these instructions, or who are travelling to places which they will not reach until after the time named herein, namely :—

First.—No. 33 Down Nagpur Passenger Train leaving Bombay at 7-30 o'clock on the 26th of February. Passengers booked by this train *from* stations between Bombay and Bhusawal inclusive, *to* stations between Bhusawal and Nagpur inclusive of Nagpur, but not inclusive of Bhusawal, and to stations on the Bengal-Nagpur Railway, should be enumerated at the stations at which they take their Tickets, and a Check Ticket given to each one. And they should be checked at their destinations when they alight. Any who, when they alight at their destinations, may not have the Check Ticket should then be enumerated. Passengers booked at stations between Bhusawal and Nagpur both inclusive, should, if not already enumerated, be enumerated at those stations on taking their tickets. All passengers to Nagpur, or to stations on the Bengal-Nagpur Railway, alighting from Great Indian Peninsula Trains at Nagpur, and who have not been previously enumerated, should be enumerated at Nagpur.

* * * * *

Twelfth.—No. 211 Down Nagpur Passenger Train leaving Bhusawal at 9-20 o'clock on the 26th February. Passengers booked by this train from stations between Bombay and Sindi inclusive, to stations between Sindi and Nagpur inclusive, should be enumerated at the Booking stations, and they should also be checked at their destinations when they alight, and any not enumerated should be enumerated before they leave the station. Passengers booked locally between Sindi and Nagpur should be enumerated at the time of booking, but passengers holding through tickets for the Bengal-Nagpur Railway need not be enumerated on this line.

* * * * *

Seventeenth.—No. 41 Down Transhipment Goods train, which carries Passengers leaving Bhusawal at 16-40 o'clock on the 26th of February. Passengers booked by this train from Stations between Bhusawal and Malkapur inclusive, to Stations between Malkapur and Nagpur inclusive, should be enumerated at the starting Stations, and they should be checked when they alight at their destinations. Passengers booked by this Train from Stations between Biswa and Nagpur, not inclusive of the latter Station, should, if not already enumerated, be enumerated at those Stations, and it should be seen that all who are in the train when it arrives at Nagpur have been enumerated.

* * * * *

Twenty-eighth.—No. 86 Up Transhipment Goods train which carries passengers, leaving Nagpur at 22-5 o'clock on the 26th of February. As this train will start from Nagpur within the hours when the Census will be in operation, it is likely that many of the passengers joining the train at Nagpur and at Stations up to and inclusive of Chandur, will have been enumerated, but notwithstanding this, passengers must be asked both at the Station where they join the Train up to and inclusive of Chandur, and also when they alight, if they alight at stations between Nagpur and Sheogaon. At Sheogaon the train halts for some time, and all alighting there or remaining in the train should then be enumerated on the arrival of the train.

This content downloaded from 14.194.219.90 on Tue, 13 Feb 2024 11:00:42 +00:00
All use subject to https://about.jstor.org/terms

Twenty-ninth.—All the Company's staff of all Departments who are travelling by, or are in charge of, Goods Trains, or Ballast Trains, or Light Engines, or are working on Shunting Engines between 20 o'clock on the 26th of February and 6 o'clock on the 27th, should be enumerated when they join their Train or Engine, and a Check Ticket given to them if they have not been previously enumerated, and they should be checked when they leave their Trains or Engines or at the first station at which they stop, after 6 o'clock on the 27th, and if not previously enumerated they should be enumerated then.

3. Passengers and the Company's Staff who travel by or are in charge of the following Trains, which will leave their respective starting stations and arrive at their respective destinations between 20 o'clock on the night of the 26th and 6 o'clock in the morning on the 27th February, should be enumerated before they enter the train, and should be carefully checked at their destinations, and any found not to have been previously enumerated should be enumerated before they leave the station. Except that, in the case of the Local Trains running between Bombay and Kalyan, only passengers who hold *single journey tickets* need be enumerated. Those who hold return or Periodical Tickets should not be enumerated by the Railway Staff. It should be seen that all passengers, with the foregoing exceptions, are enumerated at the destinations of these trains :—

Number and description of trains.	Station from	Time of Departure.	Station to	Time of arrival.
265 Mixed	Jalamb	4·30	Kamgaon . . .	5·15
273 do.	Badnera . . .	2·30	Amraoti . . .	2·50
270 do.	Khamgaon . . .	21·10	Jalamb . . .	21·55
280 do.	Amraoti . . .	23·55	Badnera . . .	0·15

Bombay, the 11th of February 1891.

GREAT INDIAN PENINSULA RAILWAY.

Circular No. 62.

Census on the night of Thursday, the 26th of February 1891.

All concerned are advised, with reference to the instructions given in Circular No. 54 of the 11th of February 1891, as to the enumeration of Passengers and the Company's Staff who may be travelling upon this Railway on the night appointed for the taking of the Census, that the following additional instsuctions should be carried out, namely :—

Second.—No. 84 Up Nagpur Passenger Train, leaving Nagpur at 20 o'clock on Thursday, the 26th of February. As this train will start from Nagpur within the hours when the Census will be in operation, it is likely that many of the passengers joining the Train at Nagpur and at stations up to Bhusawal, will have been enumerated. But notwithstanding this Passengers must be asked both at the stations were they join the train, and also when they alight, if they alight at stations between Nagpur and Bhusawal, and, if not already enumerated, they should be enumerated when they alight, and it should be seen that all have been enumerated before they leave Bhusawal Station.

Bombay, the 17th of February 1891.
