PAGES.

Increase of infant population; preponderance of male population in 1872, possibly not altogether due to imperfect enumeration; death rate and proportional sex mortality by age-periods 25

Proportion of sexes by age-periods compared with London and Calcutta ... 26

Proportion of sexes by Census, and ratio of male to female deaths in 1880 by age-periods; places supplying the largest numbers to the population ... 27

Classes by sex, ratio of males to 100 females by class in 1881 and 1872; proportion of males to 100 females; percentage of sex by sections... ... 28

Increase of infant population; infant population; variation of population, male and female, by age-periods... 29

Number and proportion of sexes at age-periods; proportion of sexes and the ratio of each sex at age-periods 30

Ratio of children to women within nubile periods of life in each class, and contrasted in 1881, 1872 and 1864; age statistics of classes; proportion of children in each class 31

Balance of the sexes in the total and indigenous population of each class. Percentage of each class born in Bombay. Organization of population in families. Number of families in 1864, 1872 and 1881, increase in number of families in 1881, size of families; persons to a family; sections having largest families 32

Families to a house, distribution of families by houses in sections, 15·8 to a house in 2nd Nagpada; house population, persons to a house; dense crowding, 67 persons to a house in 2nd Nagpada; minimum of house population in Bombay higher than maximum density in London; incidence of house population by areas; intense concentration of population, fearful condition in 1864 nearly equalled in 1881; density; comparison with Calcutta, much greater in Bombay, dwelling accommodation; definitions of a house and of a tenement 33

Number of buildings, classification of buildings, inhabited, uninhabited and out-houses; purposes for which buildings are used, buildings to an acre; area for each building, intense concentration of buildings, enhancement of pressure; houses by floors, number of floors in 1881 and 1872; increase in floors since 1872 34

Roof structure of buildings; number of tenements; distribution of the population in 6 sections of maximum concentration; buildings for use of opium and hemp 35

Places licensed for the sale of intoxicating drugs and some other purposes ... 36

Distribution of the population over the surface. Area of Island, area for each person; persons to an acre; pressure of population in Bombay; intense density in Bombay compared with London, population of the sections in which the human concentration is double that of the most crowded divisions of London; 12 sections having greatest density of population; persons to an acre in suburban or rural sections in 1881 and 1872. Space for each person in urban sections 37

Density of population in Bombay much greater than in Calcutta; comparison of buildings by floors and families to a house with Calcutta. Abstract showing classification of land in Bombay.... 38

Area of the Port Trust Properties. Classes and religious systems 39

Increased preponderance of Hindu population. Proportion of each class to the total population in 1881 and 1872; numerical relation of classes. Hindus, Hindu low or out-castes, Brahman, Lingaet and Bhatia; Native Christian and Goanese, Eurasian, European; the proportion of deaths in

THE CENSUS REPORT FOR 1881.

MUNICIPAL COMMISSIONER'S OFFICE,
PUBLIC HEALTH DEPARTMENT,
BOMBAY, 10*th May* 1883.

From

T. S. WEIR,
Surgeon-Major, H. M.'s Indian Medical Service,
Executive Health Officer,
Bombay Municipality,

To

E. C. K. OLLIVANT, Esq., C.S.,
Municipal Commissioner,
City of Bombay.

SIR,

I have the honour to submit the Report on the Census of 1881. I have described at some length the organization for the enumeration, and this description has been entered into with a view to leave on record information which may be of assistance at the next enumeration; the want of full information in regard to the measures adopted for the enumeration of 1872 was felt in 1881, and it is with the object and in the hope that a similar want may not be felt at the next enumeration so full a description of the measures taken in 1881 has been written. Some important subjects of general interest referred to in the Report of Dr. Hewlett on the Census of 1872 are not referred to in this Report, as their treatment would have occupied too much space, and moreover the excellent Report of 1872 can always be consulted. In the preparation of the statistical matter the lines of the system of 1872 have been, as far as possible, followed; it has, however, been thought advisable to arrange the tables on a different system, to construct many tables in a different manner, and to add new tables.

In submitting the Report on the Census of 1881, I have the honour to recommend to your favourable notice the following officers, who took an important part in the enumeration of 1881 :—

Divisions.	Officers of Police.	Officers of Municipality.		
		Health Department.	Engineer's Department.	Assessment Department.
	Superintendent of Police in charge of Census T. Mills.	Asst. Health Officer R. P. Brunton.		
A.	Superintendent J. Crummy.	Inspector T. C. Brennan.....A Ward.		
B.	„ T. G. Sweeney.	„ G. J. Kent .....B „	Inspector Pestonjee Mun-	Wheel Tax Collector
C.	„ H. J. Brewin.	„ T. Glover .....C „	cherjee.	Eduljee Rustomjee.
D.	„ J. Killen.	„ T. Forrest .....D „	„ Cowasjee By-	Office Assistant Pherozesha
E.	„ J. Brown.	„ A. Hallums .....E „	ramjee.	Rastamji.
F.	„ S. Page.	„ G. W. Thompson...F & G Wds.		
W.	„ J. Moffatt.	C. S. Pafford, License Inspector.		

I have the honor to be,
Sir,
Your most obedient servant,
T. S. WEIR.

THE CENSUS REPORT FOR 1881.

The Report is broadly divided into three portions :—

1. The organization for the enumeration.
2. The enumeration.
3. The results of enumeration.

The enumeration of the population of the British Empire having been resolved on early in 1881, the discussion of the measures for the taking of the Census of this Imperial city became necessary in the latter part of 1880; at an earlier period,—when in this city a struggle with destitution and famine disease-products had begun, and when, over the roads and mountain paths debouching from the ghauts and highlands skirting the sunken plains, thousands of destitute and famine-stricken were searching their way to this city, it was proposed to count the people; the proposal was considered and deferred till the period of the Imperial enumeration. In some respects perhaps it was well that the enumeration was deferred, for it would have been difficult to enumerate the people if an Imperial enumeration had not been simultaneously effected; in other respects it was unfortunate, for we have no exact record of the actual population at that momentous period when an appalling flood of destitution had swept into this city; for a short period the approaches to the city were guarded and the wanderers counted: in 1877, from the 15th of August to the 30th of September, 36,258 destitute entered the city, but we have in the record of the mortality left an indication of the numbers of the refugees and the intensity of their sufferings.

The general direction of this Census, as in 1872, fell to the Health Officer. The enumeration of the population was conducted by Mr. Mills, of the Bombay Police Force, under my direction. Mr. Mills was well fitted for the task; he brought to it an experience gained in 1872, and a varied knowledge and experience of this city and of its people; he had to leave India, broken in health, in 1882, before the preparation of the Census tables had been completed, and I fear his illness was in a great degree hastened through the arduous task of conducting the Census operations and organizing a system of tabulation: the organization of an effective and sure system of tabulation requires industry and care.

Believing as I did that an immense increase in the population had taken place, and that this increase could be ascertained by organization and forethought in organization, I undertook my portion of the duties most gladly. Mr. Mills was not anxious at first to take a chief part in the enumeration—his health was failing, and he wished to leave India; but he took the greatest interest in the methods proposed for ascertaining the growth of the population since 1872, and at last he remained, at my request, to conduct the enumeration. I must here acknowledge the interest that Sir Frank Souter, Commissioner of Police, took in the Census; his support was of the greatest value, and without his cordial support and the assistance of the officers of Police and Municipal officers, most cheerfully rendered, and the sympathy of the public, the enumeration of the people could not have been successfully accomplished. I believe the enumeration has been successfully accomplished. I cannot persuade myself that all the people have been enumerated, and that none have escaped counting; but I can conscientiously affirm that all have been enumerated whom it was possible to enumerate.

Mr. Mills was engaged from the 13th of September 1880. We began operations by a careful inspection of the areas or sections into which the Island had been divided for the enumerations of 1864 and 1872; except in placing boundaries where no boundaries existed,—for roads or well-defined lines now exist where none existed before.—in defining boundaries ill

defined, or in making boundaries where no boundaries were specified, or, if specified, but vaguely indicated, no important alterations have been made in the sections. The boundaries of the sections having been defined and marked, the division of each section into groups of buildings, each group containing an aggregation of buildings, began. The buildings aggregated in each group were called a block; the block was the unit of the organization of the enumeration; the enumerating staff were distributed by blocks; to each block one or more enumerators were appointed, and all enumerators were under the orders and control of the divisional officers of Police, each block was under the observation of one policeman; each section contained a certain number of blocks, and to each section one or more Municipal and special officers, to supervise the enumeration, and to visit buildings and examine schedules and report omissions, were appointed. This is the system of organization adopted for the enumeration; it is the system devised by Mr. A. Crawford, and I think it is the only system on which the population of this city can be successfully enumerated.

The blocks were defined by simple and natural boundaries—roads, lanes or gullies afforded natural boundary lines. The blocks in each section were clearly numbered consecutively, the number of the block and the police division being painted in large red characters at close intervals along the boundary line and on the most prominent points; it was felt to be of the utmost importance that the boundaries of the blocks should be clearly defined, that each enumerator under a policeman should be able easily to recognize and follow the limits of his block. The policemen were easily instructed in the blocks, the enumerators with difficulty.

In the latter part of 1880 there was some doubt whether an enumeration of the population would be made in 1881. A reference was made to Government, and it was ascertained that there was no intention of postponing the Census.

The blocks were numbered and the units of enumeration formed by December 1880, and in December 1880 advertisements were published calling for enumerators. After an inspection of the block organization in December with the Deputy Census Commissioner, Mr. Baines, it was decided to put a special Census number on each tenement having a separate entrance; the tenement numbering was of little use, but, had it been adopted simultaneously and in harmony with the block numbering, might have been of great value.

From the beginning of 1880 correspondence had been passing between the Deputy Superintendent of Census and this office in regard to the organization of the enumeration and the form of the Schedules; after long consideration the form of Householder's Schedule and of Descriptive Register for Houses, and of the Schedule and Descriptive Register for use in the Harbour, was agreed on; the Householder's Schedule and Register are excellent, the instructions were full and clear and in much greater detail than in 1872, but they are still far from being perfect—they are not simple enough.

It is only those who have had to instruct and anxiously watch the enumerators know how readily the slightest vagueness in instruction will mislead, and how difficult to make instructions understood and to cause enumerators to follow instructions. The Householder's Schedule is printed in three languages, and contains headings in English, Marathi and Gujarathi; this schedule has twelve columns, and contains two columns which did not form a portion of the schedule of 1872; one column has supplied information of great interest, "mother-tongue" of the population, and the other new column was for organization purposes, a very simple requirement,—the "serial number of each inmate",—but of great value in supervision of enumerators and in tabulation. The instructions were printed on the back in the general schedule, and in the schedule for Europeans and for the European shipping instructions were briefly given under the heading of each column, and in more detail on the back of the schedule; the shipping of Asiatic nations or of Eastern crews were enumerated either on a special schedule or on the general schedule. The instructions were printed in three languages, English, Marathi and Gujarathi, and the manner of filling and writing the schedules was illustrated by examples in three languages adapted to each class.

There were two Descriptive Registers adopted, for the City and for the Harcour. The Descriptive Register for the city is entirely different in form and in aim to the Descriptive Register of 1872; the Descriptive Register for the shipping is new—there was none in 1872. The Descriptive Register for the city was intended to serve a purpose beyond merely affording certain particulars—important, no doubt, but secondary to true population counting—of buildings; it was intended to afford an effectual means of checking the Householder's Schedule and the distribution of schedules, and to give accurate information of the number of families.

It was most fortunate that the distribution of schedules by groups of languages to cognate groups of people was not attempted; it would have caused delay and confusion in distribution, and most probably the difficulty of distribution would have caused imperfect enumeration, and moreover would have entailed a difficult selection of enumerators.

In one respect the Householder's Schedule of 1872 had possibly an advantage over the Householder's Schedule of 1881; on the whole, I think it is an advantage to have the instructions printed in each language under the heading of each column. The disadvantage of not having a heading in Urdu written in Arabic characters was felt. To show how easily the slightest vagueness or impracticability in instruction will cause trouble, an instance occurred, which I may give, in the instruction at bottom of schedule; that instruction laid down that the schedule should be signed by the householder, and it caused much trouble and difficulty, and therefore abstraction from the important work of enumeration, to the enumerators.

It was attempted in 1872 to procure through the Descriptive Register information regarding the material condition of the population and the sanitary condition of their buildings; this information would be of value to the administration of the city, but it cannot be obtained in the hurried observation of a synchronous enumeration; to attempt to obtain it is to divert the attention of the enumerators from their chief object, to confuse minds generally much perturbed and excited by novel and difficult duties, and, I would fear, to fail in enumerating the population. The Descriptive Register used in 1881 simply indicates essential information; the information sought for through the Descriptive Register may be broadly classed under two heads: 1stly, Corrective—Administrative; 2ndly, Enumerative—Interrogative, grouping of families by families,—by dwellings, density of population, grouping of buildings. The Descriptive Register contained columns, referring to the number of houses under the ordinary Assessment Registration and the number of tenements having a special Census number and a special Census definement.

I have already referred to the special Census numbering of tenements having a separate entrance or way of approach. In 1872 the building represented by the Assessment number was taken as the "house," and the Assessment number defined the "house;" the English definition was not applied. Had the special numbering been adopted earlier in 1881 it might have proved of value; adopted, however, it enables the arrangement of the population of this city by habitations—habitations defined houses for the enumeration—to be contrasted with the habitation organization in other cities. The definition of a tenement has imperfections, but it is a practical and clear instruction of easy and generally of definite application, and based on the broad lines of the collocation of the population around domestic circles. In a city, where to the largest section of the population family life is the sacred unit of organization, the grouping of the population in families is of great importance to be known. In this enumeration special organization was applied to ascertain the organization of family life; in the Descriptive Register a special column was left for the entry of the name of the head of each family, and another column for the entry of the serial number of each Schedule delivered to the head of each family. To show again the importance of the utmost simplicity of instruction, in the original Descriptive Register the word "serial" was omitted before "number of Schedules" and "each family," it was understood; but the enumerators, not understanding the object of the instructions on the columns, were observed to be entering the number of Schedules delivered to the head of each family, and not the serial number; the object of the columns would therefore have been lost; the enumerators were confused and

All use subject to https://about.jstor.org/terms

could not follow verbal instructions, and had not fresh registers been printed and distributed the object of this provision, regarded with some satisfaction, would not have been gained.

The "blocks," the enumeration units, had now been numbered, and each block defined by large red figures on conspicuous points; over every doorway and on many staircases were small red numbers surmounted by a "C," denoting "tenements" having a separate entrance.

The organization for the enumeration had now been completed; the machinery of the organization had been arranged with as much precision as possible: paid enumerators had been selected, 851 had been approved; to each block (and a policeman carefully instructed in its boundaries had been placed in charge of each block) one or more enumerators had been appointed; the State Departments had furnished lists of clerks to take a part in the enumeration, and to assist the paid enumerators in the last three days; but the success of the enumeration depended, in a great measure, on the intelligence and the zeal of the enumerators, and on the organization and the direction of that intelligence and zeal by the officers of Police and Health Department. The instruction of the Census officers began; the officers of Police, on whom the chief responsibility fell, had been assembled, and the scheme of enumeration explained; to the officers of the Health Department schedules had been delivered for the instruction of all officers of the Department capable of taking any part in the enumeration; officers of all the Municipal Departments had been enrolled and appointed to sections, and instructed to take an active part in the enumeration.

Recognizing that it was impossible to count the people without their sympathy and good will, appeals were made to all classes. The Census was regarded with much suspicion by the masses, numerous classes were agitated by doubts and even fears; while some feared that it preceded some great social disasters, others anticipated more material losses, and even vague rumours were circulated, and believed by the credulous and timid, of conscription of labour, to extend even to women, to recruit the forces beyond the Indian Frontier. I felt that unless the good will and assistance of the elements of popular influence could be secured the population would not be enumerated. The representatives of each community were invited to the Municipal Office, and meetings assembled; the utmost good feeling was displayed, and assistance generously offered was as freely rendered. Public meetings were called and spirited addresses delivered. We anticipated much difficulty in enumerating the Mussalman population; unfortunately a few days before the Census the pilgrimage and festival in honour of Bhawa Mulung Saheb was held; the tomb of the Peer is placed on a mountain peak overlooking Kalyan. Many thousand (believed to be over 20,000) Muslimin leave Bombay to attend the pilgrimage, and they remain for some days near the tomb of the saint. How many of these thousands would escape enumeration caused me anxiety; strenuous efforts were made to enumerate the pilgrims returning before the day of enumeration.

A meeting of 'Ulama' and prominent Muslimin was assembled in the Municipal Office, Mr. Mahomed Ali Rogay presided, and asked those present to use their influence in forwarding the enumeration, in dispelling prejudice, and in helping the enumerating officers. The Honourable Mr. Budrudin Tyebjee suggested that meetings of each community should be called, and the suggestion was approved of; this proposal proved of great value; the importance of direct assistance in the enumeration from those present was explained, and assistance promised; the promise was fully discharged; the co-operation of a number of citizens in each street was agreed on, and this co-operation proved of great value to the Census officers; it was resolved—

1. "That the Anjuman-i-Islam and the Majlis-Akhwan-i-Safa should hold meetings and invite all classes of the Mussalman community and as well as several Mutawalli of the different Mahallahs, and explain to the people the objects of the Census, and advise them to supply all information desired in the Census Returns and co-operate with the Census Officers."

2. "That the 'Ishtihar' published by the Municipal Commissioner should be distributed among the Mutawalli and managers of mosques with a request from the Anjuman-

All use subject to https://about.jstor.org/terms

i-Islam and the Majlis-Akhwan-i-Sufa in a letter, that the Ishtihar should be read at the mosques after evening and Juma prayers, and the objects of the Census fully explained."

3. "That the gentlemen present assist in their several Mahallahs in co-operating with and assisting the Census officers, and in explaining the objects of an enumeration of the people, and that the leading members of each community should call meetings of their respective communities and explain the object of the Census, and ask the members of their communities to co-operate with the Census officers."

4. "With the view of conforming to the wishes and feelings of the Mussalman community, Mussalman enumerators will be employed, as far as practicable, for the purpose of carrying out the Census operations among the Muslimin in Bombay."

5. "That the names of the gentlemen present at this meeting should be added to the Ishtihar, and that it should be notified that these gentlemen have approved the Ishtihar."

I publish these resolutions in order to indicate the policy to be adopted at the next Census. I wrote to the Secretaries of the Anjuman-i-Islam and Akhwan-i-Sufa asking for their hearty co-operation in support of the resolutions, and appealing to their assemblies to use their influence in support of the enumeration. I attended an important meeting of the Anjuman, and the Secretary of the Akhwan-i-Sufa wrote to me that the Mutawalli of the mosques and other influential Muslimin had been requested to read the Ishtihar, either at the mosques or to special meetings, and to take the best means they could for furthering the Census. The Ishtihar was widely distributed. In a few days a complete change was observed in the attitude of the Muslimin; where there had been indifference there was now sympathy, where there had been opposition there was now co-operation; in one day 300 schedules were given to Muslimin who had been overlooked by Census officers, and who now came of their own accord for schedules. I have no hesitation in stating that this change of attitude and the successful enumeration of Muslimin was due to the influence and help of the prominent Muslimin who attended the meeting in the Municipal Office.

By some classes of Hindoos the Census was regarded with much suspicion; the labouring classes were much in doubt as to its object. A meeting of influential Hindoos was held in the Municipal Office, and the measures to be adopted for the enumeration of the population discussed; it was suggested by Mr. Javerilál Umiáshankar Yajnik that a general Committee of influential Hindoos should be formed to explain publicly the objects of the Census, and to disarm suspicion, and that the Committee should divide itself into Sub-Committees for each ward to assist the enumerating officers. The Committee met again to exchange views, and resolved on convening a meeting of the Hindoo inhabitants at the Mádhav Bág. A notice, inviting the Hindoo inhabitants to meet at the Mádhav Bág to hear the objects of the Census explained, was circulated; a large number of people attended, Mr. Varjivandás Mádhavdás presided. The notifications issued were explained, and addresses, pointing out the advantages of a Census, and advocating the present enumeration, and urging the concurrent effort of all classes, were delivered by the chairman, Mr. Varjivandás Mádhavdás, by the Hon'ble Ráo Bahádur Gopálráv Hari Deshmukh, Mr. Raghunáth Náráyen Khote, Mr. Javerilál Umiáshankar Yájnik, Mr. Goculdás Jugmohandás, and Mr. Gangádás Kishordás. The addresses had a very great effect on the meeting, and some of the addresses, being of a spirited, popular character, had the exact effect wanted. The Hon'ble Rao Saheb Vishvanath N. Mandlik delivered an able lecture on the advantages of the Census; I am also obliged to the Rao Saheb for some valuable suggestions.

Whilst in the Parsee community no active prejudice nor resistance was anticipated, yet the influence of so active a community in either directly encouraging others, or by their attitude indirectly guiding them, had been clearly recognized. At an early date a meeting of representative members of the Parsee community was held in the Municipal Office, a Committee was formed, and at a meeting of the Committee it was proposed by Mr. Nanabhai Byramjee that the three Chief Dustoors be requested to convene meetings within their jurisdictions for the purpose of explaining the objects of the Census, and asking the co-operation

of the Parsee priests. It was proposed by Mr. Kaikhushroo N. Kabrajee that the notification issued by the Municipal Commissioner in Gujarathi be reprinted, with some alterations to be suggested by Mr. Nusserwanjee Byramjee, and distributed amongst the Parsee community; the notification was translated into Gujarathi, understood by most of the classes for whom the notification was intended; 5,000 copies of this notification were immediately distributed. Mr. Nowrozjee Furdoonjee made a useful suggestion that priests should be employed to explain to the lower classes the objects of the Census. Venerable Dustoors delivered addresses advocating the Census; I attended a lecture delivered by Dustoor Jamaspjee Minocheherjee.

The enumeration,—the objects of the Census,—were thus forced on the attention of all classes. The patriotism of the citizens being aroused, there was a friendly rivalry in friendly offices; instructions were printed for the guidance of all engaged in the enumeration, and additional instructions were issued as difficulties developed and the enumeration progressed. Special care was taken to employ a number of enumerators of low caste; it was most fortunate that this precaution was taken, otherwise the low caste would not have been fully enumerated.

The public sympathy had now been appealed to, and its aid secured. The enumerators were assembled at the section police stations with some confidence on the 1st of February; they had before this received some instruction; and schedules and registers had been given them to study, and they had been encouraged to ask questions on points they did not clearly understand; they were assembled on the 1st February, and to each enumerator, on an average, 30 Schedules and 2 Descriptive Registers were delivered, to commence distribution with. Observing how confused the enumerators were when assembled together, I would record the importance of having the schedules so prepared that their distribution to the enumerators can promptly be effected, and the attention of the enumerators not distracted from the primary duty of recording the buildings and distributing schedules, and the final duty of enumeration. Each enumerator, having received instruction, was sent under the guidance of a policeman to his block; for each police section a book of blocks and the names of the paid and official enumerators and policemen attached to each block had been prepared; the policeman took the enumerator round the block, explained to him its boundaries, and the enumerator, having become acquainted with the position of each building in his block, selected the building having the first number for enumeration; and having selected a building, he entered a description of the building in the Descriptive Register, and then delivered to the head of each family in that building a Schedule, and on each schedule he had entered a serial number, and the serial number and the name of the head of each family he entered in the Descriptive Register; through this simple precaution the schedules and the number of each schedule delivered at each building and to each family could be traced, and the Schedule and the Descriptive Register checked, and, moreover, it afforded an accurate and easy method of estimating families: to this check the accuracy and fullness of this Census is, in a great measure, due, and this provision is the distinctive feature between the organizations of 1872 and 1881.

The enumerators continued daily to collect and to collate information and distribute schedules, and to perform their duties from the 1st up to the night of the 5th February; those enumerators who had distributed schedules to each family in their blocks were allowed to cease work, those who had not reached each family and fully distributed schedules were kept to work for some days longer, and, until they had *performed fully their* duties; they were kept hard at work from 6 A.M. to 10 A.M. or later, and again in the evening from 5 P.M. till after 9 P.M. Instructions were drawn up for the guidance of the enumerators in completing their Descriptive Registers; the order to the enumerators was to insert at first information in the Descriptive Register in pencil, and then to submit the entries to the supervising officers, the Police officers examined the Registers each evening, and when the Registers had been approved of, they were copied by the enumerators in ink, and after copying were again examined by the Police officers. From the most intelligent of the enumerators thirty supervisors were selected to assist the Police and Municipal officers, in supervision, in

All use subject to https://about.jstor.org/terms

checking the distribution and testing the accuracy of information entered in the schedules. Gongs were beaten morning and evening in the streets, and notification made that information must be given before the 18th, that the Census would be taken on the night of the 17th, and the schedules collected on the 17th and 18th, and that all who had not received schedules should make the fact known.

The enumerators recommenced work on the 12th of February, and proceeded from house to house to examine the schedules and to inquire whether any had not received schedules, and to assist the uneducated in writing information. The officers appointed from the Public Departments assembled on the 16th at the section police stations; one or more official enumerators—as they are called—were appointed to each block, but to each section 5 are official enumerators were distributed, and placed under orders of the supervising officers to assist in the enumeration of the larger blocks, and in checking the schedules in a certain number of buildings in each block, and in supervision. Distinct orders had to be given, that the enumerators should not make inquisitorial inquiries regarding family life, and relations of the sexes or caste, and that they should chiefly confine their attention to enumeration and to observing that none escaped enumeration. Our anxiety to ascertain the family distribution of the population and the caste branches led the enumerators to believe that the relation of the sexes and caste identity should be carefully ascertained, and that statements made should by inquiries be confirmed; the zeal of some of the enumerators had to be controlled, and the statements of the people, as made by themselves, received. On the 16th and 17th the special aid of the police in examining each building, so as to ascertain whether any families had escaped enumeration, and whether any persons had failed in entering themselves in a schedule, was employed; even on the 16th and 17th we found persons who had eluded the enumerators, or who had not received schedules, or who had received schedules but had not made any entries regarding themselves, and we detected in families many persons omitted from schedules purposely. The supervising officers were busily engaged in following the enumerators and making inquiries. On the 17th the greatest efforts were put forth, and continuous supervision exercised from daybreak till the Census hour and late at midnight; enumerators in pairs visited every tenement, and the co-operation of the most influential in every quarter had been secured. At sunset the collection of the schedules began; enumerators proceeded from room to room to collect the schedules and to test the enumeration finally and the information in each schedule, and to correct the returns when imperfect. A large number of schedules were collected on the night of the 17th, but not all of the schedules, the collection again continued on the morning of the 18th, but not till after many days were all the schedules recovered.

Special care was taken to enumerate the houseless, and we were more fortunate than in the last Census, for we had the example of the failure in 1872 to distinguish the houseless from other classes enumerated, to warn us. The schedules were specially prepared, the word "houseless" being entered on the top of each schedule used for enumerating the houseless and homeless stranger. The houseless had been collected at certain points by the officers of Police, and they had not been enumerated till nearly dawn on the morning of the 18th. I spent the greater part of the night in watching the enumeration of the houseless. It was a sad sight—bands of timid, fear-stricken vagrants—crouching and shivering—caught and brought together to be counted, the officers of Police seated at tables questioning each homeless one by faint candle-light, and the questioning had to be patient and gentle, to soothe frightened minds to speak.

Authorities in mosques and travellers' resting-houses had been warned to collect houseless sleeping in masjid or musafirkhana on the night of the 17th for enumeration; the enumeration did not begin till after 10 P.M., and in the pause after the examination of each room the enumeration of the musafirkhana and masjids was most carefully done; I was present with Mr. Mills at the enumeration of the chief musafirkhana, for difficulties were not improbable.

The dangerous classes in Kamatcepoora were most skilfully enumerated by Superintendent Brewin, with whom I was present at certain stages of the enumeration, taking a

special interest in the enumeration of the northern portion of the city. I had many opportunities of observing the ability and fertility of organization displayed by Mr. Brewin in the placing of his forces and in measures of adaptability; animated with zeal for the Census, and enthusiasm to ascertain fully the condition of the population, it is chiefly to his ability and watchful supervision that the northern portion of the city, the large section consisting of elements of difficult enumeration extending across from Tardeo to the Parell Road, was so successfully enumerated.

The collection of schedules continued on the 18th. In some sections the approximate total population was known early on the 18th; to calculate quickly the population of each section very simple instructions conveying a very simple method had been given; the schedules of each block were arranged in serial order by each enumerator, and the population on each schedule counted and entered on the left-hand corner of the schedule, and the population was carried forward from schedule to schedule, till in the last schedule of each enumeration the total population enumerated by each enumerator and of each block was naturally shown. To ascertain approximately the population of a section it was only necessary to total up the population of each block; the population entered on the schedules having been ascertained the schedules were tied up by blocks, and on the outside of the brown paper in which the schedules were fastened was written the number of the block and the population. To ascertain the population of the Island add together the population of sections; to ascertain the population of a section total the population of blocks in a section; in some sections the population was counted by 8 A.M. on the morning of the 18th. This was the simple method devised for quickly ascertaining the total population, and had the enumerators been calm the population would have been known within two days, but they had been working all day on the 17th, and nearly all night, and, excited, were little able to arrange figures correctly.

On the night of the Census there was little excitement and no opposition; the absence of opposition was chiefly due to the influence and friendly offices of the active leaders of each race; the vague rumours circulated had excited alarms and fears in the minds of the simple, which, under mollifying advice, subsided into mere harmless vague expectation or apprehension. The operations, however, were not without humorous incidents. Some timid strangers devised a scheme for evading the Census officers; they imagined that by walking round the streets all night they could escape enumeration, but they were caught by watchful enumerators and confessed their plot. We had been prepared for plots, and special care was taken to examine all met in the streets, although some had to be given chase to.

Special attention was paid to the enumeration of families, for family life is the expression of social conditions or aspirations. A special notification was issued, informing the public that schedules would be distributed to the head of each family, and that (to remove all misunderstanding or doubt) each family of dependants should receive a separate schedule.

An attempt was made to distinguish between habitual residents and casual visitors, but it was not successful; the information would have been of great value; its loss is to be regretted although it is indicated, but imperfectly, by the place of birth and mother-tongue. The careful registering of family circles disclosed sad conditions of misery, and often degradation inevitable. One instance of overcrowding I observed in Duncan Road, in a shoemaker's chawl, there were 7 double rooms, the size of front rooms opening on to public street 10′ 4″ in length, 9′ 3″ in breadth, back rooms opening on to yard 18′ 3″ in length, 9′ 3″ in breadth; only three of the rooms were occupied on the night of the Census; in and outside one room we found 25 souls—men, women and children; in a second room 23, and in a third room 19.

An excellent suggestion was made that the official enumerators should spend an hour every morning from the 5th to the 17th in learning their duties; Government did not approve of the suggestion. After the distribution of the enumerators, a large number of official enumerators were transferred or granted leave of absence from Bombay, and their appointments had been cancelled; this caused very great confusion, and a protest was sent in to Government.

The Railway authorities enumerated the population of the Railway premises; their vigilance was not allowed to slumber.

The Harbour enumeration was ably carried out by the Harbour authorities; the Collector of Customs, Mr. A. C. Trevor, afforded me freely the very valuable assistance of his establishment. Captain Morland gave me his cordial support. I would especially mention the service rendered by the Superintendent of the Preventive Service, Mr. Stewart, who willingly and readily took charge, at the last moment, of the enumeration of the country craft, and of duties which had been allotted to an official, who it was believed would perform them, but who had not the organization, as was discovered, at a very late period, to conduct them. The Water Police rendered excellent service.

The enumeration of the population had now been completed; the tabulation of the enumeration remained. The schedules having been collected in the Central Office at Girgaum, the arrangement for tabulation began. I have before mentioned, that the population of each block having been ascertained, the schedules of each block were fastened together and the total population of the block written on the outside of the wrapper enclosing the schedules, and the schedules of all the blocks, having been dealt with on this system, were forwarded to the Girgaum Office. As the schedules were received in the Girgaum Office they were placed by sections; having been arranged in sections the schedules of each section were separated into classes according to an arbitrary classification of the population, and having been arranged in classes the schedules of each class were divided into bundles of 100. There are 14 classes, into which the population has been divided, the tabulation was therefore by classes of sections; to tabulate each class 11 men were employed, 1 to read the schedules and 10 to write down the information extracted and read out; the occupation column required 2 tabulators. When 100 schedules had been tabulated the tabulation was checked; the "ages" form was used for checking. Total of all the forms should correspond: if the total of each column on each working sheet was alike, the tabulation was correct; if the total did not agree, the error was easily detected. Great care was necessary to prevent mingling of divided papers in a confined space such as that of the Central Office in Girgaum.

The system on which the tabulation was conducted has now been shown: 851 paid enumerators were employed for 12 days, and 1,074 Government clerks or official enumerators were appointed, and assisted the paid enumerators on the 16th, 17th and 18th of February; of the 1,074 official enumerators 231 were Municipal Officers, and of the Municipal Officers 119 were Officers of the Health Department, and 14 were clerks of the Health Office. On the last three days there were therefore 1,925 enumerators, paid and unpaid. Each block contained on an average 39·24 houses, excluding total outhouses, and 193·16 families consisting of 984·61 persons. On the last three days each enumerator, paid and official, had to collect the schedules of 76·27 families of 388·73 persons occupying 15·49 houses.

There were 149,890 Schedules and 5,609 Descriptive Registers used. In this table is shown the "blocks" in each section.

It will be interesting to review the enumerations of the population attempted previous to 1872.

The population in 1667 was estimated to be 10,000.

A Census is mentioned as having been taken in the year 1716, giving only sixteen thousand persons, "but it probably embraced only the Fort and a portion of the Island."

"A Census, taken in the year 1814-15, of which the record is imperfect, gave 11,000 as the population of the Fort, and 221,550 as that of the whole Island, and 20,786 as the number of houses. The British, Military, Marine, and Civil were stated to be 4,300 persons, the resident Native Christians and Jews 12,300, the Moosulmans 28,000, the Hindoos 103,800, and the Parsees 13,150. The floating portion of the population was given as 60,000. This Census is quoted in Hamilton's Gazetteer.

"In the year 1833-34 another numbering of the people was undertaken; but after it had continued nearly twelve months the only result reported was, that during that time 117,016 adults had been counted. The Senior Magistrate of Police, under whose direction the Census was taken, added to the number of adults an equal number for the children, and reported 234,032 as the probable total population.

"Between the years 1844 and 1848, Government had several times under consideration how to obtain an accurate return of the population, and in 1849 accepted the offer of the Superintendent of Police to furnish it. The money and establishment at the disposal of that officer were altogether inadequate, and his attempt ended in failure; the tables were however published in the *Government Gazette* of 10th January 1850. Two more attempts were made in the year 1851, but with no better success; the results of these were not printed."

The want of accurate information in regard to the population became more and more felt "as the schemes for water-supply, drainage, and gas-lighting were brought forward, and especially as the Death Returns showed a rapid and large increase in the mortality, but left it doubtful how much of this was due to increase of population, how much to removeable causes of insalubrity."

"On Sir Bartle Frere's entering on the Government of this Presidency, His Excellency caused a Census Act to be brought before the Local Legislative Council. This Act, rendering it obligatory on householders to give correctly the required information, was approved of and sanctioned by the Government of India. The educated part of the Native community warmly supported the measure, and advocated it in their various spheres of influence among their countrymen; and, to increase the intelligent co-operation of the heads of the community, the Governor assembled the Native Justices of the Peace, and explained how the knowledge of the people, that is sought for in a Census, conduces to good government and to sanitary and social improvement. The leading members of the different sections of the community had meetings, and after having conferred together, they issued explanatory circulars in their different languages, and called on all to give their active aid to the Enumerators. Mr. Dosabhoy Framjee Kadaka circulated, at his own expense, two thousand copies of a pamphlet, in which he explained the objects and uses of a Census, and the methods of taking it that have been followed in different countries."

"Instructions having been given by the Government to the Commissioner of Police, he was left to carry out the appointed measures. He was to be allowed the aid of such Clerks as could be spared from the Government Offices for the day of the Census, and the rest of the Enumerators were to be hired for the work."

"A few men were at first engaged to ascertain the probable number of Schedules that would be required in the various languages in use, and also to estimate how many lists would probably be filled in by the Householders, and how many would be left to the Enumerators to fill in. When this inquiry had proceeded for some days it was found that the work was of greater magnitude than had been anticipated. The numbers engaged in this preliminary inquiry had repeatedly to be added to, and serious inconvenience was experienced in methodizing the work, from many of the streets and lanes being unnamed, and nearly all the houses being unnumbered, as the Assessment numbers are few and irregular, and they are nearly useless for registration purposes."

"On the eve of the intended distribution, a communication was received to the purport that the Act had been disallowed by Her Majesty's Government in England. The Governor of Bombay" (and this is most interesting), "having met with cordial support from the Native community, and having every assurance that the people were not only willing, but that the leading and educated part of them was very desirous to have a Census taken, the work was allowed to proceed without the sanction of penalties."

"There were altogether 921 persons engaged in the enumeration on land; of these, 148 were employed as Superintendents of Districts, and 773 as Visitors and Enumerators. Of the whole number, 331 wrote in English, 147 in Goozurathee, 423 in Murathee, and 20 in Hindoostanee. Besides these, there were other 70 Enumerators employed in the Harbour. Thus, for a registered population of 816,562, there were 843 Enumerators, or one for every 968 individuals, concerning each of whom there were seven points of information to note, after questioning and perhaps cross-questioning the unwilling and stupid, to elicit the truth."

"Owing to so many of the Enumerators being lent or engaged for one day only, instead of all having to perform, each in his own district, the distribution, the collecting, and the scrutiny of the Householders' lists, great trouble and delay was experienced in gathering in the Schedules and correcting them. Had it not been for the note on the back of each Return showing the number of the families in the house to whom Census papers were given, many lists would have been lost, as some houses here are inhabited by many families, as in Edinburgh and in Paris. In one instance fifty Schedules had been left in

one tenement, and only twenty-six were spontaneously returned; but on making the scrutiny the deficiency was detected through the note on the back of those received, and the remainder were recovered."

Two enumerations have been taken since this was written; still Mr. Dosabhoy Framjee took an active interest in the Census of 1881, and with a wide experience and knowledge of the people of this city his assistance must always prove of great value.

I am indebted to Dr. Gerson daCunha for the following interesting notes about old Bombay: there is a certain historical appositeness in the notes being written by a *savant* of the ancient name of DaCunha:—

"To form a correct idea of the development and growth of Bombay one must study its condition from the earliest historical times, which may be divided into three periods, viz., Hindû, Muhammadan, and Portuguese, followed by the modern one, which is British.

"The Hindû period—from the early dawn of history to the conquest of this part of the Western Coast, including Bombay, by the Muhamadans—is mostly made up of legends, tales and traditions founded on more or less authentic sources. This is a history of the gods, temples and villages, each bearing its own name, which names by process of time have in some instances been rendered meaningless, while in others they can be traced back to their original sense. These Hindû chronicles do not give us any indication of the trade or population of Bombay, but it is presumable that a place with so many and important temples having their own *Mahâtmyas*, or panegyrics, written either in Sanskrit or in Prakrit, such as Walkeshwar, Mumbadevi, Kalbadevi, Mahalaksmi, and so on, may have had a fair amount of population, and a state of civilization generally met with in towns resorted to by pilgrims from distant parts to perform religious rites at their shrines.

"In the early centuries of our era it appears that Bombay, with the adjacent country, belonged to the Rashtrakuta kings of the Deccan. Later on it belonged to local chieftains or naiks, tributary to more powerful princes of the Deccan, who were also masters of the North Konkan.

"Of the Muhammadan period Bombay has retained still fewer monuments than of the Hindû period. At the close of the 13th century Bombay and Mahim were under Bhimdeo, from whom it was taken by the Muhammadans. These latter have left the vestiges of their rule more at Mahim than at Bombay. They are probably the forts of Mahim and of Bombay,—this at the place where the Arsenal or Castle is now,—and the mosques and tombs of *pirs* at Mahim.

"Although it cannot be said, as some suppose, that Bombay really had no history before the Portuguese occupation, the annals of the latter are fuller in details than those of both the Hindûs and Muhammadans.

"To pass on, then, to the Portuguese period of the Bombay history, the first fact recorded by the chroniclers of that nation is the occupation of the place as early as 1527, after the defeat of the fleet, in the Bombay harbour, belonging to the King of Cambay, during the Governorship of Lopo Vas de Sampaio. In January 1531 the Viceroy Nuno da Cunha selected the island of Bombay for the rendezvous of his formidable expedition to Diu, holding there a grand review of his troops.

"It seems that the island of Bombay was not such a rocky, barren place as it is generally represented to have been then. Soon after the acquisition of the island the Portuguese, the soldiers of Heitor da Silveira, gave it the name of *A ilha da boa vida*, or 'the island of the good life,' from the pleasant days they spent there, which designation was correct till the middle of the sixteenth century, as stated by D. João de Castro in his *Roteiro de Goa a Diu*, p. 81. At last the native name of Mumbae, ultimately changed into Bombay, after passing through the Portuguese stages of Mumbaim and Bombaim, prevailed. About the middle of the sixteenth century the island of Bombay was granted in perpetuity, paying a yearly quit-rent, to Dr. Garcia d'Orta, author of a work on Indian drugs printed for the first time at a missionary press in Goa in 1563.

"On the conquest of Bassein and the districts around by the Viceroy Nuno da Cunha

This content downloaded from

All use subject to https://about.jstor.org/terms

in 1533 Bombay formed one of the eight divisions into which the province of Bassein was divided.

"Bombay was divided, for a better land administration, like other districts, into several villages, the name of Bombay being confined to that narrow part of the island which extends from the Apollo Bunder to Mahalaksmi and from Girgaum to Oomerkadi. The other villages were Mazagon, Mahim, Parel, Warlee, and so on.

"The early documents from the time of the conquest in 1533 to 1550 refer to Bombay in this narrow sense. This Bombay proper was rented to certain individuals for an annual rent, varying from year to year, excluding the revenue derived from the Walkeshwar custom-house, which was farmed to a Hindu by name Posagy.

"In 1548 Bombay was rented to one Mestee Diogo for 1,432½ pardaos, which arrangement probably lasted till 1550. It was the system of the Viceroy D. João de Castro and of his immediate successors to reward the services of distinguished Portuguese officers by granting them lands in perpetuity on the payment of a yearly quit-rent.

"From 1550 it seems that the island of Bombay was granted to Dr. Garcia d'Orta on the condition of his paying the abovementioned quit-rent. What those pardaos are now equivalent to is rather difficult to say. The value of this coin has varied considerably from the earliest times of the Portuguese rule in India. In old times by *pardao* was meant a gold *pratapa* or *hún*, equivalent to a gold pagoda of 3½ rupees; while the modern pardao is worth only half a rupee. The Bombay rent in pardaos was most probably in gold coins. Dr. Garcia d'Orta lived in India from 1534 to 1572. He was granted the island of Bombay in 1550 and was its proprietor up to 1572. He mentions Bombay three times in his work under the name of Bombaim and Mombaim, as well as his tenant Simão Toscano, who sent him mangoes from a tree which had fallen into the habit of flowering and fruiting twice yearly. There is no record of Dr. Garcia having left any descendant in India, although Cardinal Saraiva mentions the names of both Garcia d'Orta and of Nicholau d'Orta without saying a word about their relation to each other. The latter is said to have gone from Goa overland to Madrid in 1606 and returned to India by the command of King D. Filippe II. of Portugal and III. of Spain. From want of succession the island then appears to have relapsed.

"In 1634 we are told that behind the Fort, where now the Arsenal or Castle is, was a small thickly populated village under the lordship of the grantee, whose name, however, is not mentioned, and who had to provide for its defence. The proprietor of Bombay is called *vazador*. Its population (of the Castle) consisted of 11 Europeans, all married, and 59 natives able to carry arms. The Captain lived in the Fort, while a little behind it was a chapel and a house belonging to the order of the Augustinians. When the island was ceded to the British, the tradition current is, the Governors lived in the same castle, while the chapel was converted in course of time into what is now called the Old Secretariat, the Augustinians going to the island of Coles or Colaba, which was not then included in the territory cession of Bombay. In that Old Secretariat there began to live the Governors of Bombay until the beginning of this century, when they repaired the old church and convent of Franciscans (not Jesuits, as it is generally supposed) at Parel, where they changed their residence. Between the Castle village, where the lord of the island was living, and the old village of Cavel, where the native converts of the Portuguese missionaries were settled, was a vast cocoanut plantation, now the Esplanade, in the middle of which was a church, now represented by a cross, and on the opposite side, close to the modern Elphinstone School, was its cemetery.

"The village of Cavel is of great antiquity; it was there that a considerable amount of the *Rashtrakuta silver coins were found.*

"At the time of the cession of the island to the English in 1661 the island of Bombay was owned by Donna Ignez de Miranda, widow of D. Rodrigo de Mancanto. She lost, through the cession, dominion or the rights of a grantee she had over the island, but not the revenue she used to derive from her estates, which were eventually bought from her and her

descendants by the East India Company, just as the village of Mazagon was bought from the Tavora family, and so on, at a later date.

"I need not mention the conditions of growth of Bombay after the cession. But an important Portuguese document of a later date, viz., 1727, gives an accurate idea of what Bombay was then, and its value as land property. This inquiry about the value of the island was made with the view to buy it back by the Portuguese, owing to the repeated quarrels of the Bandora Jesuits with the Bombay English. This is the document:—Bombay had two towns, Bombay and Mahim, and eight villages, Mazagon, Warlee, Parel, Vadala, Naigaon, Matunga, Daravi and Colaba. It had 7 hamlets—2 under Vadala, 2 under Daravi, and 3 under Parel. It had 5 Koli quarters—in Bombay, Mazagon, Warlee, Parel and Sion. There were 3 salt-pans—Kaim near Matunga, Sewree and Vadala. The estimated produce and revenue of the different parts of the island were: of the towns, Bombay 40,000 cocoa-palms, some rice lands and old rice lands now built on, and Mahim 70,000 cocoa palms and 592 *mudas* of rice."

In 1661 the Island of Bombay (including Salsette and Tanna) was ceded by the King of Portugal to England. The cession arose out of the marriage of the King of England, Charles II., or the marriage was made the occasion of the cession; the Portuguese authorities in India were not willing to accept the treaty; with possibly a keener instinct of the value of the Islands than those at a greater distance and in a far-off land, they were slow to allow them to pass out of their hands; negotiations were prolonged, and it was not till 1664 or 1665 that the English took possession of Bombay. In 1668 the King of England handed over the Island to the Governor and Company of Merchants of London trading into the East Indies, for an annual rent of £10,—the expenditure by the Municipality of Bombay in 1881 was Rs. 37,98,872-3-8; but there is one condition in the Charter by which the East India Company obtained possession of this Island, of great interest in connection with the development of the civic privileges and the liberties of the citizens, and that condition is that 'all persons born in Bombay were to be accounted natural subjects of England'; freedom of religion and of conscience was proclaimed, and a city founded by adventurous spirits became a refuge to adventurous fugitives. In liberty this city has grown, may the spirit of freemen ever animate its citizens!

This, according to Fryer, was the condition of the English settlement in Bombay on the landing of the first Governor in 1664:—"They found a pretty well-seated but ill-fortified house, four brass guns being the whole defence of the island, unless a few chambers housed in small towers, convenient places to scour the Malabars, who heretofore have been more insolent than of late, adventuring not only to seize cattle, but depopulate whole villages by their outrages" * * About the house was a delicate garden, voiced to be the pleasantest in India." This is how Fryer found the Town:—"It is a full mile in length, the houses are low and "thatched with oleas of the cocoa trees, all but a few the Portugals left, and some few the "Company have built. The custom house and warehouses are tiled or plastered, and instead "of glass use panes of oyster shells for their windows;" and we are further told "the English "have only a burying-place called Mendam's Point, from the first man's name therein interred, "where are some few tombs that make a pretty show at entering the Haven, but neither Church "or Hospital, both which are mightily to be desired." The learned and adventurous traveller's description of the Island in 1675 is very clear, and much of the description will apply even in 1883; there are still "woods of cocoas" in Mahim, and although there are no breaches through which the sea rushes, salt water passes up the open channel which flows where the sea rushed in—the main drain—and overflows hollow ground which will be good land. "On the back side of the towns of Bombaim and Maijm (Mahim) are woods of cocoas, "under which inhabit the Bhandrines, these hortoes being the greatest purchase and estates "on the Island for some miles together, till the sea breaks in between them, over against "which, up the bay, a mile, lies Massegoung (Mazagon), a great fishing town, peculiarly notable "for a fish called Bumbalo—the sustenance of the poorer sort, who live on them * * * * "In the middle, between Parell, Maijm (Mahim), Sion and Bombay, is a hollow wherein is

All use subject to https://about.jstor.org/terms

"received a breach, running at three several places, which drowns 40,000 acres of good land, "yielding nothing else but samphire, athwart which, from Parell to Mahim, are the ruins of "a stone causeway made by Pennanees. At Maijm (Mahim) the Portuguese have another "complete church and house, the English a pretty custom house and guard house; the Moors, "also, a tomb in great veneration for a peer or prophet." Dr. Fryer had evidently not a clear idea of the nature of a "Peer"; the "Peer" is evidently Fakheh Alli Makhdum Saheb, whose tomb in Mahim is still a place of pilgrimage, but I fear the time may come when that tomb shall be no more and the sea shall wash over it.

An illustration of how old times are changed:—In those days the Hubshee of Jinjeera, who held the office of Admiral to the Emperor Aurungzeb, was a powerful foe of the English colony, and Bombay had been overawed by the forces of the Jinjeera sea-king: it is said that he held all Bombay outside the Castle for a year. He landed at Sewree in 1689, and the invasion caused the greatest consternation in the Island. Hostilities appear to have arisen through the English making war on the Mogul ships, and adventurous Englishmen roaming the seas plundering Indian commerce, and also partly through the prohibition at that early date to sell slaves in Bombay. This is what I read:—"The Sidi landed at Sewree on the night of the "14th February 1689 with 20,000 men, marched to Mazagon, took the Fort with all its "ammunition and treasure (said to have been about £10,000), hoisted his flag there and "made it his head-quarters."

It was not till 1716 that Mr. Boone, the Governor, demanded the cession of the customs dues collected at Bandora, and the opening of the Tanna river to English trade, from the Portuguese. The two great English Companies were united in 1702; but there were other bands of adventurous traders, or "interlopers" as they were then called, who bravely dared monopolists and sought to trade free; the account of one of these is too interesting to be omitted. We read—"An Association of Scotchmen had engaged in an effort to gain a share "of the trade in India, but without that prudence and discretion for which their nation "has been in other instances distinguished. They seem never to have had more than one "ship, called the 'Speedwell,' the Captain of which was a notorious polygamist, who, "having been brought up as a Highland drover, was little acquainted with the practice, and "still less with the science, of navigation. At Batavia he permitted his ship to be driven on "the rocks, where she became a total wreck, a small portion only of the cargo being saved." A good deal of the cargo saved consisted of curious glassware, we are informed. This Company soon disappeared and passed the way of other adventures.

Although there is no record of any one having suffered death for religion in Bombay, poor witches—I suppose they were generally witches of malevolent disposition—were tortured. The following curious instance of the conviction of a European witch is referred to in an article in the "Bombay Quarterly Review." Near the Cathedral appears to have been considered the safest place to exorcise the "devil;" this is the description of it:—"The records of the Court of Justice show that an ignorant woman, "named Bastok, was more than once whipped for what was called 'diabolical practices.' "Like too many Europeans of past days in India, this infatuated creature had imbibed super-"stitions, and professed to cure sick persons by the use of charmed rice. Convicted of this "offence on the 5th of July 1724, she was admitted by the Court to have been guilty of "witchcraft, not from evil intention, but from ignorance, and so they enlighten her dark "mind in this wise:—The Court orders that 'she receive eleven lashes at the Church-door, "'and afterwards she and all persons that are found guilty of the like do such penance in the "'Church as customary.'"

A difficulty and source of unpleasant odours which existed more than 200 years ago still exists. Fish manure is a valuable but unsavoury product, and 200 years ago it was as much objected to, by those who did not use it, as it is now; epidemics were ascribed to the putrid smell from the fish manure, or "koot" as it was then written, "so that the practice was repeatedly "prohibited and as often, on the petition of the cultivators, again permitted." In 1733, the

Koonbees who cultivated the rice fields fled to Salsette because they were restricted from using fish manure. On the 22nd February 1742 the Fazendars or free-holders offered Rs. 10,000 to Government, on condition that the prohibition against fish manure was removed; they represented that unless the prohibition was withdrawn they would be ruined; Government were not, however, to be persuaded then. Fish manure was, however, used afterwards, and it is still used.

If Bombay in developing into an imperial city has changed much in appearance and in condition, in deathly reputation it has also changed; it is now one of the wholesomest of the great cities of the world; 200 years ago it had a deadly reputation; Mr. Ovington in 1689 thus describes Bombay:—"As the ancients gave the epithet of Fortunate to some islands "in the West, because of their delightfulness and health, so the moderns may, in opposition "to them, denominate Bombay the Unfortunate one in the East, because of the antipathy it "bears to these two qualities."

Fryer had a very unfavourable opinion of the climate, for he writes, after describing the "power and state of the President"—"I reckon they walk but in charnel houses, the "climate being extremely unhealthy, at first thought to be caused by Bubssbo—rotten fish, "but though that be prohibited yet it continues as mortal"; he estimated the population of the Island at about 60,000; in fact most of the Island at that time might, according to this traveller, be described as a number of rocks above water.

Having now surveyed the growth of the city of Bombay, we may examine the places in which rest the generations that have lived in this city and have passed away. I am indebted to the research of Mr. Barrow, Secretary, Town Council, and Clerk of the Municipal Corporation, for some interesting information on the places for the disposal of the dead that have existed in Bombay. While Mr. Barrow has had exceptional opportunities of studying the civic records, he has devoted an unusual amount of time and brought exceptional knowledge to their examination and study, and to the elucidation of remote but most interesting points of civic history.

"Among the first reference to places for the disposal of the dead, met with in the old books relating to Bombay, we find that of the English burying-ground at Mendham's Point, the site of which was probably part of the vacant ground fronting the Municipal Office. Thomas Mendham was the first Englishman who died in Bombay, and the cemetery opened for his interment continued to be used until 1760 or 1763, when, for military purposes, it was closed, and the tombs broken down and the surface levelled. One of the first sights that cheered the sailor arriving in the harbour up to that time had been these tombs. As to the burning-grounds, Mr. J. Douglas, in his *Book of Bombay*, says that in March 1677, Governor Aungier agreed with the Banians who came from Diu to settle here, that they "should be allowed to burn their dead"; Dr. Fryer, who first visited Bombay in 1673, states in his delightful old book, that "on the other side of the great inlet to the sea is a great point abutting against Old Woman's Island" (Colaba) "and is called Malabar Hill, a rocky wooden mountain yet sends forth long grass. Atop of the hill is a Parsee tomb lately raised." When the cemetery at Mendham's Point was closed, the English burying-ground at Sonapore was opened, and when, in its turn, that was shut up on the last day of 1868, about 17,000 bodies had been interred within its narrow limits. A scurrilous writer who resided in Bombay in the days of Governor Duncan, or Sir Evan Nepean, and about the year 1814, published an amusing book in London called *Quy Hai*, gives an illustration of the cemetery, which he called "Padre" Burrows' "Godown." Adjoining this cemetery is the Mahomedan burying-place, which appears to have been in use from time immemorial, and is still the chief place of sepulture for Mussalmans. So far as I am aware, however, it was only in 1812, that this burial ground was formally recognized as such. Countless thousands of bodies have been buried here, but as this community do not follow the European method of confining a body in an air-tight coffin, but simply place the dead in immediate contact with the earth, the decomposition of the remains is marvellously rapid. The neighbouring Portuguese cemeteries had also been in use for centuries, but in 1868, Mr. Crawford, the Municipal

Commissioner, succeeded in getting them closed, together with all the other (except one) places of intramural interment for Christians."

"Long before that time, however, the difficulty of providing for the disposal of the dead occupied the attention of Government, and in September 1845, the Grand Jury made a presentment at the Sessions to the effect that the Board of Conservancy should take into consideration the necessary measures for abating the abominable nuisance resulting from the burying of the bodies of low-caste Hindoos, and of dead cattle and other carrion in Back Bay. But although this nuisance was complained of as intolerable; it had to be tolerated for many years longer. The proposal to provide a substitute on the salt morass or Flats was discussed for the next seven years following, and when in July 1852, Government sanctioned the formation of the burying-place on the Flats—on Mr. Conybeare's plan and estimate—at a cost of Rs. 5,146, it was 'on the clear understanding, that should the nuisance anticipated by Government be experienced, the Board' would be required to remove the same. There was a very general practice, too, in those days among Brahmins, Sonars and the higher caste Hindoos of burying the bodies of still-borns and newly born infants dying before the ceremony of name-giving, in the immediate vicinity of the parents' houses, in the courtyard, and in the more crowded parts of the city, even under the bathing place. This very dangerous practice was brought to light by Dr. Leith in his Mortuary Report for 1850, wherein he added that this practice is not enjoined by the Shastras. The Senior Magistrate of Police, Mr. Spens, was written to by Government for opinion and report on this statement; and in reply Mr. Spens expressed his concurrence with Dr. Leith as to the necessity for stopping such a practice. Mr. Spens stated that he had consulted a Shastree Mr. Govind Narayen, of the Suddur Adawlut, who, in replying as to whether the practice was a merely local one or is one enjoined by the Shastras, wrote:—"In this way it is the practice to bury the dead bodies of little children. The Shastra enjoins, however, that their dead bodies should be buried in unpolluted ground, outside the town, different from the usual burying-grounds, and containing no dead bones; and owing to the difficulties offered to burying in such ground, belonging to others, the practice of burying near dwelling-houses has obtained. The above is the custom of the country, and if it be prevented, and if unpolluted ground containing no dead bones be allotted for the burial of deceased children, it will be an excellent measure in my opinion, and accordant with the Shastras."

"The most important result of these investigations was the report to Government written by Dr. Leith in 1855 (in his Mortuary Report) for 1854—a year, in which it may be remarked in passing, that the deaths from cholera numbered 3,353. Therein he wrote:—

"'The disposal of the dead ought to have more attention than has yet been given to it, for as it is now practised, there is much in it that is very objectionable; and in considering this matter, it has to be borne in mind, that the clandestine domiciliary interment of infants, which was first noticed in the Report for 1850, still remains unchecked, affording facilities for the undetected commission of infanticide, and contributing to the pollution of the air of dwelling-houses, through the decomposition of the bodies interred in or near them.

"'The state of several of the burial-grounds, both Musulman and Hindu, is such as to require immediate amendment, as the foul gases that taint the air in their neighbourhood are detrimental to health. The burial-ground on the north side of Grant Road may be mentioned as one of these. There is a burial-ground, however, which is so horrible and shameful, that it seems only to require to be brought to the notice of Government to have it suppressed, it is that for Hindoos at Sonapur. The exact size of the ground is not, I think, clearly defined; the Policemen on the spot said there was an order that no grave should be dug below high-water mark; but the tides vary in height, and there was nothing to indicate the limit towards the sea. I had the breadth of the ground measured from the outside of the outmost grave, where it was still wet from the retiring tide, to the wall of the Musulman cemetery, and also its length north and south, as pointed out by the men on

duty; the area was found to be 10,581 superficial feet. Knowing that during the last seven months 2,711 bodies had been interred there, it may be concluded that in the course of a year the number will be nearly 4,649; and reckoning the due proportion of these as children, it is calculated that were the year's number of bodies laid at the same time, shoulder close to shoulder, without intervening space, they would not only completely cover the whole area, but they would have to be laid in two tiers, the second equally closely packed as the first, and there would still be more to form part of a third tier of corpses.

"'The rapidity with which the bodies decompose is marvellous; and yet the short time that is actually required for the process is liable to be cut still shorter at Sonapur, for the man in charge of the place said that eight days was the time under which it was prohibited to reopen a grave for a new burial. He pointed out a grave just then dug, from which the remains of one who had been buried a month before were being taken up, to make room for another occupant. Were decomposition in this sandy soil not so rapid, it would of course be impossible that so many dead could be deposited there; yet as in putrefaction the soft solids of the body are changed into poisonous gases, the greater rapidity of the process does but the more intensely pollute the air, by giving a larger quantity of those gases in a given time. The moral effect of such a scene on those who resort to this place to deposit their dead must be bad, and on those also who become habituated to its horrors, which are sometimes even aggravated in the monsoon, by the surf washing the newly interred from their graves.

"'Along the shore of Back Bay there are several other graveyards, and also a depository for dead cattle, the stench from which also is most disgusting, and overpoweringly offensive; and all these are to the windward of the Native Town, which has its sea breeze, that would otherwise be healthgiving, thus poisoned. It is likely that the unwholesome emanations are one of the causes why Girgam has what is thought to be a proportionately high mortality when cholera is epidemic.'"

"At that time (1855) the more thickly populated parts of the city were liberally provided with centres of air contamination, as will be observed from the fact that the official list of places for the disposal of the dead, recognized by the Police, numbered nearly seventy, as follows:—

"For Christians: Upper Colaba (1); Fort, St. Thomas's Cathedral; Roman Catholic Chapel, Medows Street; the Armenian Chapel in the same thoroughfare; Esplanade, Marine Lines, Presbyterian; Sonapur, English, Portuguese; Mungulwady, Portuguese, Armenian; Grant Road, "Missionary;" Mazagon, Portuguese (2), Church N. S. de Salvaçao, Portuguese; Matoonga, ditto; St. Michael's Church, ditto; Mahim, ditto; Dadur, ditto.—Mahomedan: Upper Colaba; Bengalpoora; Jail Road (2); Sonapur (4); Mungulwady (5); Nesbit Lane, Byculla; Grant Road; Parell Tank (2); Moira Durga; Worlee:—Hindoo Upper Colaba; Sonapur, Back Bay; Mount Road, Mazagon; John Road; Golowree Road. Sewree Road; Dharavie; Sion; Cooliwady; Bhandarwady; Matoonga (2); Wadalla Bhoiwada; Naigaum; Worlee; First Pakhadee; Second Pakhadee.—Jewish: Grant Road (3); Race Course Road.—Chinese: Grant Road. And there were also cemeteries at Bunmolee Thacoordwarra (near Naigaum), Worlee, and Worlee Sluices. The Jail Road grounds were on the verge of tanks, the water of which could hardly have escaped contamination.

"In the previous year (1854) the Board of Conservancy requested the Senior Magistrate of Police to draft a Bill for the removal of the abuses and evils resulting from burials in the crowded parts of the town. Under the provisions of the Bill as drafted, that Board was empowered, with the sanction of Government, to prohibit the burial, burning or exposure of the dead at any particular place; domiciliary interments were forbidden, and persons committing misdemeanours against the provisions of the Bill were to be made liable to a fine of Rs. 1,000 for each offence and to imprisonment extending to one year.

"There was naturally a good deal of opposition to the Bill, and especially in regard to a suggestion that had been made by Dr. Leith to the effect that the new cemeteries should be

confined to the Northern Extremity of Bombay, and that railway trains should be run daily for the conveyance of funeral parties. On this point a Hindu wrote as follows :—

"I conceive that when Dr. Leith made the proposal to carry the dead by railway, he could not have been acquainted with the prejudices of the Hindoos ; they can never adopt the plan, the near relatives and friends of the deceased will never allow other castes to touch the body, which they are obliged to carry on their own shoulders until it is laid on the pile. Dr. Leith's proposal is, therefore, not in consonance with the religion of the governed ; and supposing, for argument sake, they are prevailed upon to do so, still with regard to time, how can the plan succeed, for one may die in the morning, the other at noon, and the third in the evening, and it is impossible they can be kept over until the time of the train ? Besides they cannot be carried together, for their religious prejudices cannot admit of it ; it is a religious custom with them, that those that attend the funeral never take any food until the dead body is either burnt or buried, and they have returned home and washed ; and the people in the house, and near relatives also cannot eat anything until the body is removed from the house, and burnt or buried. The Parsees' religious custom can never admit their bodies being removed in railway carriages, and they will likewise have a great objection to the power being allowed to any one to close any of their cemeteries at any time, on some of which they have spent upwards of a lakh of rupees."

"The draft underwent considerable modification, in the mean time Government Resolution, dated 5th October 1855, directed the Senior Magistrate of Police to issue orders for the total and immediate discontinuance of all burials in the sands of Back Bay, and as the order was vigilantly carried out, the nuisance was at length put an end to.

" In 1863 a 'Burial Commission' was appointed by Government, and on the 11th February 1865 the Commission recommended a scheme for the concentration of the cemeteries at or near Matoonga, and the setting apart of 252 acres of land for that purpose, at a cost estimated by one Engineer at Rs. 11,89,350. A Committee of Engineers, appointed by the Municipality to report on the scheme, came to the conclusion that more than one-third of the 252 acres was a foot and a half below the level of high-water mark ; and that the total amount of the estimate should be Rs. 22,89,130, including 10 lakhs for raising all the ground above high-water mark. The Committee were further of opinion that the complete project, including building Towers of Silence, Railway communication, &c., could not be carried to completion under Rs. 47,30,416.

" This great scheme fell through, and the question of shutting up the old cemeteries and providing new ones was one of the first questions that engaged the attention of Mr. Arthur Crawford when he became Municipal Commissioner in 1865, but it was not until the close of 1868 that the new cemetery for the Christian dead at Sewree was formally handed over for burial purposes. This ground was formerly the Horticultural Gardens, and was given to the Municipality by Government. As soon as this new cemetery was ready for use, the old Christian cemeteries at Sonapore, Marine Lines, and Girgaum were closed. The one in Marine Lines had been open since the 7th May 1826. For the Christians under the jurisdiction of the Archbishop of Goa, however, a separate burying-ground was provided at Matoonga. It was not until near the end of 1870 that Colaba cemetery—which, opened in the year 1816, had, like all the other old burying-grounds become horribly overcrowded, for more than 4,000 corpses were interred there—was shut up. An American cemetery (opened in 1813) was also closed about the same time, a new ground, near Antop Hill being given to the American Mission Church in place of the place which was closed, and new cemeteries were opened, on land granted for the purpose by Government at Matoonga, for the Prarthana Somaj, the Armenians, Low-caste Hindoos, and for a section of the Jewish community. At this spot, too, the Chinese have their last resting-place on earth. Close by there is an old disused burying-ground formerly used as a cemetery for the European Artillery men stationed at Matoonga. A village notoriously fatal to the troops kept in garrison there, whilst those who did not die off were pretty sure to be attacked

by guinea-worm. The cemetery has not been buried in for more than half a century past, but some of the tombs are still in fair repair.

"Until the year 1870, Mr. Crawford was unable to induce the Trustees of the burning-ground at Sonapore to do anything to improve the very discreditable condition of the walling round the ghat, but after threats of closing the place, the new Committee of Management consented to do what was necessary, built up the existing boundary wall, and levelled and improved the ground. The Committee also stopped several abuses at the yard, and by its wise action reduced the cost of cremation by nearly 50 per cent.

"In the year 1871 Mr. Crawford found that although cremation is the proper Hindoo mode of disposing of the dead, as it is certainly the most cleanly of all modes, yet poverty obliged the relatives to bury nearly 6,000 corpses per annum, out of a total Hindoo mortality of 10,500 persons. Believing that this fact was not known to the leaders of the various castes, he addressed a letter to all Hindoo Justices, and convened a meeting at which various resolutions were adopted, not merely to remedy this state of affairs, but to improve the general condition of Hindoo cemeteries and burning-ghats.

"A somewhat similar course was at the same time adopted by the Mahomedans in regard to improving their cemetery at Back-Bay, for under pressure from the same authority they walled in the cemetery."

I may offer the following remarks :—The provision of places for the disposal of the dead is not yet complete. The space for burying Hindoos on the Flats has been much increased since 1873. Fresh ground at Arthur Road, in area 56,000 square yards, near the old burying-ground on the Flats for the burial of Hindoos, has been set apart, and even this fresh ground has been more than once buried over since 1875. A piece of ground in area 62,000 square yards has been enclosed for a Mussulman burying-ground, it has not yet been used. But all these burying-grounds are within an area within which burials are not recommended by the Committee appointed by Government in 1882 to consider the disposal of the Flats. The disposal of the dead has been discussed, I fear, from a frigid-zone point of view, so to speak, the removal of the dead to a long distance from the homes of the people is not altogether free from purely sanitary objections ; it involves a complete change in the views of the people—Musulman and Hindoo ; it involves delay, and the dangers arising from delay, in the disposal of the dead ; and it involves, what has apparently never occurred to any one, the expense and danger of enclosing the dead in cases. I am not quite sure whether the disposal of the dead in the sandy soil on the Mody Bay foreshore is so great a sanitary danger as has been apprehended ; it appears to me to be open to doubt. I have recommended that the low-lying vacant ground on the Flats should be reserved for a cemetery ; this ground may now be procured at a nominal price, hereafter it may only be procured at a great sacrifice ; it is an excellent position—open ground in an open country—to form a Necropolis.

Up to 1875 the burying of the dead in the Hindoo burying-ground on the Flats was let by contract. In 1874 Rs. 800 were paid for the right of burying the dead ; this was not a system calculated to secure a correct return of the number of deaths, and it was therefore abandoned.

There are now within the island 19 places registered for the burning of the dead, and 40 places registered for the burying of the dead ; in 1880, of the dead, 5,569 bodies were burnt and 15,826 buried.

The interesting notes which follow, drawn up by Mr. Javerilál Umiáshankar Yajnik, indicate the opinions come to by the people concerning the Census and the views of the masses on the simple instructions prepared for their enlightenment, and I think these notes will be found of value at the next enumeration ; instructions may be clear to those who write them, but they may not be equally clear to those for whom they are intended. The chief fact to be remembered is that instructions must be intelligible to ordinary people and understandable by ordinary minds ; they may be intelligible to the enumerating officer, but not intelligible to those whom they are intended to be intelligible to and to instruct.

"You will remember that on the 31st January last some of the leaders of the

Hindoo community, in response to your invitation, met at the Municipal Hall to consider what steps might be taken to ensure a correct enumeration of the people. In the course of the discussion which took place there it was made evident that among the higher and educated classes of the Hindoo and other sections of the native community no difficulty need be experienced in the way of obtaining correct returns. It was in the case of the large numbers of the working and illiterate population that the Municipal authorities needed the help of the leaders of the people to explain to them the real objects of the Census, and disabuse their minds of certain wrong impressions as to the use to which the returns were likely to be put. It was then suggested that the best course to adopt under the circumstances would be in the case of the Hindoos to call a public meeting of all the different classes of that community on a convenient day, when the objects of the Census might be explained to them. Accordingly a meeting of the Hindoo community was called at the Mádhav Bág in February, notices for the same having been given in the newspapers, and by means of handbills in Gujarati and Marathi circulated among the people. The gathering numbered from four to five thousand persons—representatives of almost all the different sections of the Hindoo population. Mr. Varjivandás Mádhavdás explained the purposes for which the meeting was called. He also had the printed notices in English, Gujarati and Marathi read to the meeting. These notices were issued by the Municipal Commissioner. On the Chairman inquiring if there were any among those present who wished to have their doubts cleared up, numerous questions were put to the meeting. They were all answered by the Chairman, the Honourable Ráo Bahádur Gopálráv Hari Deshmukh, Mr. Gangádás Kishordás, Mr. Raghunáth Náráyen Khote, myself and others. The work of answering many of the queries was much facilitated by your presence and presence of Mr. Mills on the occasion. As some of the questions put there and then bore pertinently on the notions entertained by the people regarding the use and objects of the Census, it may serve some useful purpose to make a brief reference to them in this place.

"Prominent expression was given at the meeting by some to the notion that one of the objects of the Census was believed to be the ascertaining how much more money was likely to be collected by Government by means of additional taxation. Other queries bordered on the ridiculous. It was, for instance, inquired what the object of the Census Commissioner could be in trying to ascertain how many male members of a household were bachelors, married or widowers, and how many females were unmarried, married, or widows. It was explained to them that taxation was not the object of the Census, since if Government thought of levying a tax they could do it without having recourse to a census enumeration; that the main object was to ascertain the social and economic condition of the people, and the changes which had taken place in that condition at stated intervals, and to provide for schools, dispensaries, sanitation, and in a period of famine for increased supplies of food-grain, should the actual addition to the population be ascertained by means of the Census.

"Another point which had to be made clear was that the day appointed for taking the Census was the same throughout India, and that the names of those members only of each household that were present in the house on the night of the 17th February were to be entered in the Form. Those among the working population and the lower classes who could not themselves write out the Forms had them written up in advance of the due date, and were puzzled to know what to do when they saw that one or two of those whose names were put down in the Form had left before, or were about to leave on, the 17th February. They had to be told that such names should be struck off by a line drawn over them.

"Then came the question as to the mode in which each of the twelve columns in the Census Form was to be filled up. I was called upon to clear up doubts and answer queries by those who desired to know what information was to be supplied and what to be omitted. With respect to column I, it was puzzling to many to know whether strangers who had put up for the night only were to be included in the enumeration and entered. This was answered in the affirmative, with the caution that their names were to be distinguished

from those of the regular inmates by means of a line drawn between. With regard to servants, and especially domestic servants who, though residing the whole of the day at their master's house, slept at another place, or in the verandah of a house at night, it was necessary to tell them that they should get enumerated in the schedule which their masters filled up. The option to leave out the names of females in the second column, but to give their number only, gave general satisfaction, as being more in accordance with current usage among Hindoos for the husband or wife not to mention each other's names. Column 3 required no remark. The statement of age last birthday in column 4 was not felt to be a difficult matter in the majority of cases, at least among the higher classes of Hindoos, who have almost invariably their horoscopes by them. Among the lower and illiterate classes, however, who seldom possess such guides, no exact age could be given, and I should not be surprised if it was found that in their cases the number put down was a pure guess.

"The demand for particulars as to marriage in column 5 was not viewed with satisfaction. Hindoo married life, it should be noted, differs widely from European married life. A Hindoo girl, although married, continues to live under the roof and protection of her father long before and even after she joins her husband and separates from her family. A Hindoo boy lives a married life in his father's house. This is one of the marked features of the Hindoo joint family system. But these and other points, although of small importance intrinsically, are yet such as a Hindoo is not disposed to give out. Again, a "widower" is one of those epithets so disagreeable to a Hindoo that he would not like to be known socially, though it may be quite a fact.

"In connection with column 7 under the head of caste, the written instructions gave those who were Brahmans to understand that for special information regarding their *vedas*, *shakhas* and *gotras* an additional Form should be supplied to them. Their desire to give the information was ascertained, so far as the Gujarati Brahmans were concerned, at a meeting of the leading members of the Gujarati Brahmans held at the house of Mr. Bháishankar Nánábhái about a week before the Census day, when all present expressed their readiness to give the particulars asked for. I cannot help thinking that Native and European scholars will consider it a pity that an excellent opportunity was missed of obtaining the information which possessed the highest interest for them.

"Columns 8 and 9 need no remarks. With respect to column 10 some delicacy was felt, especially by Hindoo women of superior castes, in stating their occupations, which, though perfectly honest and lawful in themselves, indicated stinted means or impoverished circumstances on the part of those who carried them on. Under such circumstances many of them omitted to give their occupations. With regard to column 11 many nice points were raised as to who should be properly called 'educated and 'illiterate.' For practical purposes, however, it was thought desirable to avoid going into the niceties of the question. The same may be said of information called for in column No. 12.

"In conclusion I may be permitted to remark that any complaint as to the present Census Form being more of a complicated nature than its predecessor of 1872 would be well founded if the information it called for was such as a person of ordinary intelligence could not well supply. That, however, was, I believe, not the case. Again, the value of the information sought for under the twelve heads cannot be held to be too great, when it is considered that it will furnish the best means of ascertaining the changes in the social and economic condition of the people, that have resulted from the operation of active forces at work in a population representing a mixture of races from different quarters of the globe, and subject to all the civilizing influences of modern times."

In finishing this portion of the Report dealing with the enumeration I have only to acknowledge the valuable assistance I always received (and most readily) from the Deputy Superintendent of Census. Mr. Baines took the greatest interest in the organization proposed for the Census, and in the preparation of the Forms he took a great deal of trouble, and I may say that the form of the excellent Schedules and Registers is chiefly due to his suggestion.

The Population enumerated at the Census of 1881.

I now come to the results of the Census, and they are, I believe I may state without any hesitation, most satisfactory; a population of 773,196 has been enumerated—19·98 per cent. more than by the Census of 1872; the population of this city has increased by 128,791 since February 1872; it is chiefly due to immigration. The increase of 19·98 per cent. analysed is made up of 17·80 per cent. due to persons not born in Bombay and 2·18 per cent. to persons born in Bombay.

	1864.	1872.		1881.	
	Males and Females.	Males.	Females.	Males.	Females.
Born in Bombay	174,039	107,828	92,785	114,060	100,625
Not born in Bombay	642,523	291,888	151,904	350,703	207,808

An enumeration at the period at which the Census is taken, the season of annual industrial immigration, maximum inflowing of labourers and strangers, must result in a preponderance of males, and the preponderance must be estimated by comparative Census figures; although the excess male population is less than in 1872, there is an excess of males, and yet the increase of the male population, prosperous and vigorous as this city has been, has not been in proportion and in rapidity equal to the increase of the female population: for instance, the male population has increased 16·27 per cent. and the female 26·05 since 1872; the percentage of males to the total population is 60·11 in 1881 to 62·03 in 1872, and the percentage of females to the total population is 39·89 in 1881 to 37·97 in 1872; but the most curious fact is that the proportion of females born in Bombay to total females in 1881 is only 32·62 to 37·92 per cent. in 1872; and I may now mention that the percentage of males in 1881 born in Bombay is 24·54 to 26·98 in 1872; this fact throws some light on the extraordinary increase of the infant population, and shows that the immigration—chief disturbing cause in the sex proportion and in other conditions—is not solely an adult male immigration,—it indicates the elements now amalgamating into the population; and an annual female immigration is of obvious social and sanitary import,—it is a result which might be expected from easy and quick communication by land and sea; in 1872 in the indigenous population there were 860 females to each 1,000 males, and in 1881 there are 882 females to 1,000 males, and amongst the immigrants 520 females to 1,000 males in 1872, but in 1881 there are 592 to 1,000 males. A few of the broad facts of the enumeration are exhibited in this table:—

	1881.	1872.
Males to 100 females	150·68	163·35
Increase per cent. of males in 1881 over males in 1872	16·27	.....
Increase per cent. of females in 1881 over females in 1872.....	26·05	.....
Percentage of males on total population	60·11	62·03
Percentage of females on total population.....	39·89	37·97

The infant population has increased enormously,—increased 11,124 since 1872, an increase of 96·6 per cent.; it is one of the most remarkable facts disclosed by this Census.

Population under 1 year of age.

1881.	1872.
22,636	11,512

The preponderance of the male population is less than in 1864 and 1872; excluding the harbour population there are 143·04 males to 100 females. It has been assumed that the preponderance of males in the population of Bombay was due in a great degree to imperfect enumeration. No doubt there is a reluctance on the part of some portions of the population to give information regarding females, and we are prepared to find that some females have escaped enumeration; it was estimated that some 48,000 more females ought to have been enumerated in 1872; this opinion was mainly based on the proportion of male to female deaths: the preponderance of male mortality is less than the excess male population shown by the Census, and hence the inference that the female population has not been fully enumerated. During the 1st quarter of the nine years from 1872 to 1880 inclusive the proportion of male to female deaths was as 116·9 males to 100 females; deducting 1872 the ratio is 117·5 males to 100 females; including the harbour the proportion of males to females we have seen to be 150·68 to 100, and excluding the harbour 143·04 to 100; it may be well at this opportunity to offer some remarks on the difference between the proportion of males to females shown by the Census, and the proportion of the sexes registered in the mortuary tables of the first quarter; the proportion of the sexes in the mortuary statistics can only be accepted, even as a rough test of the accuracy of the enumeration, and of the balance of the sexes in the population, with considerable reservation. Before accepting the mortuary statistics as an approximate test of the distribution of the sexes in the population, accurate data of the flow of immigration and emigration must be collected, and further the relative care bestowed on male and female children must be investigated, for if unequal care was bestowed mortuary results abnormal to the enumeration would follow. The relative chances of life of the male and female adult population would have to be appraised before accepting the mortuary statistics as a guide to the distribution of the sexes in the population. The mortuary statistics show that adult females between 4 and 40 are exposed to greater perils and more mortal than adult males at the same life-periods. I am therefore inclined to think that the error in the Census enumeration of 1872 was not so great as has been believed. In 1881 the mortality of males at all ages was 8·33 per 1000 less than the mortality of females. In this table is shown the mortality of males and females between 6 and 40:—

Return showing the Death-rate at different periods of life in 1881.

1881. Ages.	Males. Rate of Mortality. Per 1,000 of Population.	Females. Rate of Mortality. Per 1,000 of Population.	Male to 100 Female deaths.
6 to 12 years	6·38	9·39	86·55
12 to 20 „	7·54	14·87	69·66
20 to 30 „	12·66	20·46	114·21
30 to 40 „	17·26	20·86	171·23

And, moreover, the proportion of females at each period of life does not indicate a reluctance to give information of females at ages when reluctance to give information might be expected. I find, for instance, that the proportion of females under 20 years of age to the total population

All use subject to https://about.jstor.org/terms

of females is greater than even in London by 8·3 per cent., and 16 per cent. greater than in Calcutta. At the period of life approaching maturity there is apparently a higher proportion of the female population in relation to total females than in London, and from 5 to 20 about 12·4 per cent. greater than in Calcutta. It is at the periods of life when perils of womanhood have been encountered and other perils have to be passed, when those who have worked and toiled their day return to the village home that the female population of Bombay as shown by the enumeration thins off.

In this table is shown the percentage of males and females to total males and females at different periods of life in London, Calcutta and Bombay.

Percentage of Population at each Period of Life to Population of each Sex.

BOTH SEXES.

	Under 1 year.	1-5	5-20	0-20	20-40	40-60	60 and upwards.
London	3·0	10·0	29·7	42·7	33·4	17·7	6·2
Calcutta	1·6	5·5	21·0	28·1	46·6	20·2	5·1
Bombay	2·9	7·7	33·1	43·7	41·4	12·8	2·1

MALES.

	Under 1 year.	1-5	5-20	0-20	20-40	40-60	60 and upwards.
London	3·2	10·6	30·8	44·6	32·5	17·5	5·4
Calcutta	1·3	4·4	19·6	25·3	50·7	20·1	3·9
Bombay	2·4	6·3	31·3	40·0	45·3	12·9	1·8

FEMALES.

	Under 1 year.	1-5	5-20	0-20	20-40	40-60	60 and upwards.
London	2·8	9·4	28·7	40·9	34·2	18·0	6·9
Calcutta	2·1	7·5	23·5	33·1	39·2	20·5	7·2
Bombay	3·7	9·6	35·9	49·2	35·4	12·7	2·7

Contrasted with the preponderance of females under 20 years of age, we find that the proportion of males under 20 is less than in London, but more than in Calcutta: this does not suggest an error in female enumeration; between 5 and 20 the proportion of males is nearly the same as in London, but much higher than in Calcutta; the higher ratio of males under 20 in Bombay as contrasted with Calcutta is very nearly in the same proportion as the preponderance of females in Bombay over Calcutta. The highest proportion of females is at the period of life when most reluctance would be expected in giving information of females, and most difficulty expected in obtaining information; under 20 of the female population 49·2 per cent. were enumerated; at no one of the age-periods is there so large a proportion of males. The falling off in the population at advanced periods of life is an indication of the migratory elements and nature of the population. The excess of males in the population begins after the 9th year, when youth immigrate to seek employment or education.

The proportion of males to females at each age-period tends to establish the comparative correctness of the numbering of females at each period of life, while indicating the migratory character of the population; and some further light is thrown on the sex-

proportion by the proportion of male to female deaths; to show the proportion of males to females, which can be contrasted with the previous table, this table, exhibiting the relation of the sexes by the Census and in death, has been prepared :—

Ages.	Population by Census of 1881.			Deaths in 1880.		
	Males.	Females.	Males to 100 Females.	Males.	Females.	Males to 100 Females.
1 to 30 days	889	873	101·83	1,300	1,029	126·33
1 to 6 months	4,159	4,330	96·05	998	860	116·04
7 to 12 months	6,084	6,301	96·55	1,078	904	119·24
Total under 1 year...	11,132	11,504	96·76	3,376	2,793	120·87
1 to 5 years	29,508	29,609	99·65	1,684	1,782	94·50
5 to 20 years	145,394	110 814	131·20	1,027	1,393	73·72
Total under 20 years...	186,034	151,927	122·44	6,087	5,968	101·99
20 to 40 years	210,478	109,273	192·61	2,660	2,099	126·72
40 to 60 years	59,806	39,054	153·13	1,661	1,063	156·25
60 years and upwards	8,445	8,179	103·25	772	836	81·23
Total...	464,763	308,433	150·68	11,180	9,966	112·18

The total proportion of males to females may mislead unless that it is remembered how this proportion is arrived at, and that the ratio is inflated by abnormal male preponderances amongst small sections of immigrants; for instance, the proportion of males to females in the population born in Bombay is only 113·35 males to 100 females, and very nearly approaches the proportion of male to female deaths in 1880, which was 112·18; the proportion of the sexes in the population born in that country from which the flow of immigration is greatest—Ratnágiri—is 168·8 males to 100 females; in some small sections the preponderance of males is very great: the population from Manilla is only 129, but the ratio of males to females is 4,200 to 100; the population born in Marwar and Rajputána is 9,381, but this population has 802·88 males to 100 females. The proportion of males to females by birthplace (12 localities, in order of population, selected) is shown in the table following :—

		Proportion of males to 100 females.
1.	Bombay City	113·35
2.	Ratnágiri	168·82
3.	Poona	123·14
4.	Satára	162·86
5.	Cutch	154·18
6.	Surat	174·39
7.	Káthiawár	179·76
8.	Goa, Damán, Diu	234·47
9.	Thána	150·19
10.	Other States (Gujarát)	226·24
11.	Kolába	150·40
12.	Márwár and Rajputána	802·88

The proportion of males to females by class is shown in the table following; of the large sections of the population the male preponderance is least amongst the Parsee race, there being 108·73 males to 100 females in 1881, in 1872 the ratio was 110·15 to 100. Amongst some races of Hindus in the population fewer males than females are found: for instance, notwithstanding the preponderance of males amongst Brahmins as a class, of Kanara and Telinga Brahmins there are 88·6 males to 100 females. There is manifestly a reluctance on the part of the migratory classes to bring their females to brave the uncertainty of a strange city.

One of the most remarkable results (a result of great sanitary import) of this Census is the enormous increase of the infant population; children under 1 year of age have increased from 11,512 by the Census of 1872 to 22,636 in 1881, or an increase of 96·62 per cent. Between 6 and 12 the population has increased 62·96 per cent., and between 12 and 20 years 48·91 per cent. The number of infants under one month must be very nearly correct, 1,762 were enumerated, and on referring to the birth returns I have ascertained that between the 16th January and the 17th February 1,311 births were reported and registered.

At 5 years of age and under, the population in 1881 amounts to 95,373 against 69,005 in 1872, and is equal to 12·33 per cent. of the total population, while in 1872 the population at this period of life was equal to 10·71 per cent. of the total population; of the 95,373 children, 5 years of age and under, 47,501 are males and 47,872 females. It will be observed that at periods of life over 40 the population has decreased as compared with 1872; many explanations may be offered of this; it is, however, clear that a great adolescent augmentation of the population has taken place.

Under 5 years of age 81,753 children, equal to 10·57 per cent. of the population, were enumerated, to 57,311 children of this age enumerated at the Census of 1872. The facts regarding children 5 years of age and under are shown in this table :—

CHILDREN.

	Children.	Boys.	Girls.	Percentage to Total Population.		
				Children.	Boys.	Girls.
5 years of age and under	95,373	47,501	47,872	12·33	6·14	6·19
Total under 5 years	81,753	40,640	41,113	10·57	5·26	5·31

Between the ages of 6 and 12 years 12·81 per cent. of the total population were enumerated,—99,014 children between these periods of life were found, I may state that the proportion of children between the same ages to the total population was 9·43 per cent. in 1872; it is curious and suggestive looking at the results of this Census, in regard to the balance of the sexes, showing a higher ratio of females in the population, that between these age-periods the proportion of males to females is higher than in 1872, there being 127·40 males to 100 females in 1881 against 116·37 to 100 females in 1872, whereas in the next life-period, between 12 and 20 years of age, the excess of males is less than 1872. 18·57 per cent. of the population were enumerated between 12 and 20; and between the ages of 20 and 30 25·68 per cent., the proportion of males to females being 184·55 to 100 against 199·82 to each 100 females in 1872; and in the next period of life, between 30 and 40, 15·68 per cent. of the population were enumerated, the proportion of males to 100 females being 206·85 against 233·61 in 1872.

It is interesting to observe the number of children to full-grown women in the population at the time of each of the three enumerations; in 1881 there were 23·57 children under 2 years of age to each 100 women between 15 and 45. In this table is contrasted the proportion of children to women within the nubile period of life in 1864, 1872 and 1881:—

	1864.	1872.		1881.
	Percentage of children under 2 years of age to women of the ages between 14 and 44.	Percentage of children under 2 years of age to women of the ages between 12 and 40.	Percentage of children under 2 years of age to women of the ages between 20 and 50.	Percentage of children under 2 years of age to women of the ages between 15 and 45.
Hindoo of other Castes	9·8	16·20	18·14	22·24
Hindoo Low-Castes	9·6	17·93	20·65	24·60
Musulman	10·7	18·36	19·65	24·90
Parsee	15·6	24·87	26·89	30·27

European	15·7	29·34	33·53	33·69
Total...	10·7	17·53	19·47	23·57

The highest proportion of children under 1 year of age is found in the Parsee community; the large proportion of infants and the small death-rate are evidences of the vitality of the Parsee race. Eurasians have the next greatest number of infants to Parsees, but at from 1 to 5 years their ratio falls below Parsees ·7 per cent.; from 5 to 20 the number of Eurasian children and youth far surpass the number in any other community; between 20 and 40 the proportion of Eurasians falls to the lowest of any of the communities, 23·97; between this ratio and the proportion (30·36) of Parsees between 20 and 40 years lies the true proportion of adults between 20 and 40 in the population born in this city. It is probable that, in a great degree, the large proportion of Eurasians between 5 and 20 is due to immigration, and that the small number between 40 and 60 arises from emigration; it is, however, possible that with greater preservation of infant life there is greater preservation of susceptible elements to be cut off at later periods of life. The statistics that follow appear to indicate that the Eurasian population possess more vitality than they are represented to have, and I am inclined to believe that the Eurasian population are physically a finer race than they are supposed to be.

50·30 per cent. of the European population are between 20 and 40.

The percentage at Age-Periods of each class to the total population of each Class.

I now come to the arrangement of the population in families. The precautions taken to approach all families, and to prevent any family circle escaping enumeration, have resulted in an increase of 29,804 in the number of families over the Census of 1872; excluding the Harbour the families in 1881 are 29,367 more than in 1872, and 44,931 more than in 1864. These results are shown in the next table:—

	Number of Families.		
	1881.	1872.	1864.
Including Harbour	149,890	120,086	Not given.
Excluding Harbour	146,821	117,454	101,890

Notwithstanding the total increase in the number of families, the average family as represented in the number of persons to a family is very nearly the same as in 1872; this clearly indicates that the increase in the number of families is not one of enumeration but of actual increase; excluding the Harbour there are 5·09 persons to a family to 5·29 in 1872, including the Harbour the number is 5·15, to 5·36 in 1872. In 1881 the largest families were in the Fort South, 7·21 persons, and in Upper Colaba 6·51, and in Mandvee 6·26 persons to a family.

* Includes Musulman and Christian Negro African.

The number of families to a house has increased from 3·95, by the Census of 1872, to 4·92; deducting the houseless and distributing the population over the occupied buildings there are 5·1 families to each house; the scale of distribution of families by houses varies from 2·6 in Sion to 15·8 in 2nd Nagpada, and the highest average of persons to each house is observed in that section having the largest families to each building; the largest number of families to a house is found in 2nd Nagpada, 15·80, and we find also the largest number of persons to a house in the large and squalor-crowded dwellings of 2nd Nagpada—as many as 67·18 persons collected in 15·8 families to each house. The minimum of house-population by districts or sections as called in Bombay is apparently higher than the maximum in London; Mr. Baines informs me that the highest average to a house in any of the smaller towns of the Presidency is about 7 persons,—how fearful the compression in Bombay! the number of persons to a house varies from 12 in Sion to 67 in 2nd Nagpada; the incidence of the house population exhibited by the Census greatly depends on the class and form of building; in the Esplanade, Military and Municipal rows of single or double rooms, each room having a separate entrance and being a separate tenement, and schools and hospitals, raise the average in each house; and in Tarwady the high average of house population is chiefly due to the organization and form of the buildings; in Tarwady there are schools, hospital and large private mansions with numerous retainers, and both the Esplanade and Tarwady having small populations, the average is rapidly inflated by groups of house concentration.

The average per house does not fully represent the concentration of population in a portion of this city; it must be remembered that in small buildings, although the total population may be small, there may be intense crowding; the small house population found in the Fort South is due to many of the buildings being used for business during the day and only thinly occupied at night. The number of persons to a house has increased from 20·93 in 1872 to 25·09 in 1881, and this is of infinite seriousness and danger. The distribution of the population by houses shows how nearly the city has come in house-crowding to its crowded condition in 1864, and how greatly the city has changed since 1872, and this house-crowding notwithstanding the extension of building-space and increase in the dwelling-space and buildings since 1872. The density of the population is very much greater than in Calcutta, although the size of the families is little less; Bombay is therefore in a very much more crowded state, and its population in a very much more unfavourable position than in Calcutta. In the report on the Census of Calcutta of 1881 I read—"The average number of souls "to an inhabited house was thus in the town 11·6 and in the suburbs 6·6; the average "number of souls to a family was in the town 5·2 and in the suburbs 4·8." But the crowded life of this city is within frail and porous buildings and protected by a benign climate.

Before referring further to the distribution of the population by dwellings, it will be well to analyse the extent of the dwelling accommodation of the population found in 1881. The first definition of a house applied was nearly the same as the definition adopted in 1872; a house was considered to comprise "the dwelling-place of one or more families with servants having "a separate entrance from the public way"; at a later stage a further definition was considered necessary with a view to ascertain more fully the collocation of the population; this definition was necessarily arbitrary, but still it was capable of practical application and easily understood; a house—or, as I shall speak of it hereafter, with a view to distinguish the house of the first definition,—"a tenement"—was defined to be "a building used for any purpose, or a dwelling-"place of one or more families, with tenants, occupants or servants having a separate entrance "from a public road or thoroughfare or yard or open space."

I have already referred to the numbering of tenements. It is difficult, however, to draw any comparison between the total number of houses by the Census of 1881 and the number enumerated in 1872; although a comparison can be instituted in another respect. Opinions as to the distinction between a house and an outhouse would differ; enumerators in different portions of the city might hold different opinions as to what constituted a house, and what an outhouse, and even in regard to the definition of a "house"

there was room for a perverse difference of opinion and interpretation; there could, however, be little room for misunderstanding as to the number of stories or floors in a building, and as to whether a building was inhabited or uninhabited: therefore it is possible that the number of houses by floors at each enumeration afford the most accurate data for ascertaining and contrasting the dwelling accommodation of the population at each period. The "house" of the Census of 1872 was virtually the "house" of the Assessment Register; the house of 1881 had a definite Census conception; an analysis of the dwelling accommodation at each period gives the following results:—By the Census of 1881 there are 28,315 inhabited "houses" and 1,508 uninhabited, and 1,722 outhouses; in all 29,823 buildings, out of which 5·06 per cent. are uninhabited; the 28,315 inhabited "houses" include 4,139 chalis, a class of lodging-house now enumerated for the first time; including inhabited and uninhabited 74·45 per cent. are used as dwellings, 13·88 per cent. as chalis, 4·58 as shops and 2·21 as warehouses, and the remaining 5 per cent. are used as offices, temples, &c. The average number of buildings to each acre is only about 2, and the average area for each building is therefore 0·48 per acre, and for each dwelling 0·50; but this average sparse distribution of buildings arises from the recent growth of the city and the rural character still of its suburban districts, and it suggests the caution that must be exercised in drawing inferences from averages; in the six most crowded sections there are 21 houses to an acre, but in five suburban only 0·59—what a contrast! the highest concentration of buildings is in Kharatalao Section, 35 houses to an acre; this is a most intense crowding, and be it remembered that in London the greatest number of buildings to an acre is about 22. By the Census of 1872 there were 22,214 inhabited houses and 1,668 uninhabited, and 7,565 outhouses,—of which be it stated 5,809 were inhabited; the number of inhabited houses, rejecting outhouses for comparative purposes for reasons hereafter to be explained, found in 1881 was therefore 6,101 more than in 1872, and the number of uninhabited 160 less; the outhouses were, however, more numerous in 1872. I have already referred to the difficulty of enumerating outhouses, and returns of outhouses cannot be accepted unreservedly and safely; the number of inhabited outhouses in 1864 and of outhouses in 1881 is nearly the same.

The following facts will indicate in what degree buildings have grown and pressure has increased since 1872. The number of houses by stories at each Census affords an indication, not very cheerful taking existing densities into remembrance, of the condition of and the change in the dwelling accommodation of the population during these years, and taken in connection with the general information about buildings is probably the safest test of the variation in pressure; to 10,009 buildings with ground-floors in 1872 there are 11,935 in 1881, to 6,633 with two floors in 1872 there are 7,877 in 1881, to 3,973 with three floors there are 5,406, to 2,113 with four floors 2,878, to 927 with five floors 1,299, and to 227 buildings having six or more than six floors in 1872 there are 428 in 1881; the greatest increase, in actual number of buildings adopting this classification, in that class consisting of a ground-floor, which amounts to 1,926, and in buildings having three floors 1,433; the greatest proportional increase, adopting a percentage classification, according to floors is in buildings having six and more floors, equal to 88 per cent., according to other floors it falls to 40 per cent. in buildings having five floors, 36·20 per cent. four floors, 36·07 per cent. three floors, 18·75 per cent. two floors, and 19 per cent. ground-floors. The pressure has been seriously enhanced, the floors in number have increased about 25 per cent.; is there any clearer evidence of the necessity of the measures adopted to diminish this concentration and pressure of population—open spaces around buildings—in dimension according to purpose for which building is used and height of structure?

Deducting uninhabited buildings, harbour population and houseless, the average population of each house is about 5 more than in 1872.

It will be seen that the greatest proportion of buildings are ground-floor, and that the proportion of ground-floors is less than in 1872; the greatest number of houses consisting of a ground-floor are found in Sion—section of groups of villages—1,203 out of 1,317 dwellings—in all 89 per cent. The greatest proportional number of buildings having six floors are found

All use subject to https://about.jstor.org/terms

in the Fort North, and more than six floors in section of greatest house-crowding, in the Fort North the largest number of large buildings are found.

	Total inhabited and uninhabited Houses	Ground-floor only.	2 floors.	3 floors.	4 floors.	5 floors.	6 floors and upwards.	Total.
1881	29,823	40·02	26·41	18·13	9·65	4·35	1·44	100·00
1872	23,862	41·91	27·77	16·64	8·85	3·88	·95	100·00

Examining again the purposes to which buildings are put, we find many developments since 1872. The number of buildings used as shops is 1,365 to 239 in 1872, and warehouses 658 in 1881 to 553 in 1872. Spinning and weaving mills have increased from 10 in 1872 to 30 in 1881. Turning to places of adoration we find there are 17 buildings used as churches to 13 in 1872. The number of mosques is 76 to 93 in 1872; this is probably due to a more careful distinguishing of buildings solely used as Musjids and Jamis from tombs. The number of temples has increased from 176 in 1872 to 209 in 1881.

In the roof structure of buildings many changes are to be noticed; there are only 2,169 buildings with thatched roofs in 1881, to 6,676 in 1864 and 3,735 in 1872.

Although the number of tenements indicates the dwelling concentration and life agglomeration, the number of persons to a tenement does not represent so vividly the house concentration of population as the number of persons to a whole building; in a building containing the most intense human concentration but in which each room had a separate entrance there would be fewer persons to each tenement (but the number of persons to each tenement would represent the number in each room) than in a large building having large rooms occupied by few people and having only one common entrance to the rooms. The total number of tenements is 73,033; the largest number of tenements are found in the Camateepoora Sub-Section, as many as 5,099; Bhooleshwur has the second highest number of tenements, 4,150. In this table is exhibited the family organization and distribution of the population by dwellings in the six sections of maximum concentration under 5 heads:—

Sections.	Families to a House.	Sections.	Persons to a Family.	Sections.	Persons to a House.	Sections.	Persons to a Floor.	Sections.	Persons to a Tenement.

It is of interest to know the number of places licensed for the indulgence of opium and hemp; there are 10 opium shops for the indulgence of opium only; 9 set apart for chandool, and 10 to muddat; and the table following shows the number of places devoted to the exhilarating use of hemp and its numerous fascinating preparations:—

	Shops.
Opium	10
Chandool	9
Muddat	10
Total	29

22 square miles, 165 acres, 4,568 square yards; it may be noted that the calculations of 1872 were based on an area of 18 square miles; if the shore population, of 748,309, in 1881 were equally distributed, there would be 92·14 square yards to each person, and 52·52 persons to each acre; in 1872 it was estimated that there were 92·82 square yards to each person, and 52·14 persons to each acre; but, for practical comparative purposes, assuming an equal area there are about 10 persons to an acre more than in 1872. If we compare the number of persons to the area of Bombay with the density of the population in London, we find the general pressure of population greater in this city, and fearfully more intense in the districts of most intense human concentration; the density of population in the most dense section of London is less than the density in any of the 12 most densely populated sections of Bombay representing a population of 429,566 and which have 458·57 persons to each acre; in London the average is about 49 persons to each acre, in Bombay 52; but the extreme pressure in London is 222, whereas in Bombay it rises to 759 persons to an acre; we may well exclaim alas! when we think of the chances of life of the tender young amidst this population.

The population of the sections in which the crowding is double that of the most crowded divisions of London is equal to more than 37 per cent. of the total population, but the area of these sections is only 3½ per cent. of the area of the Island; a broad statement such as this suggests a more vivid idea of the unequal distribution and intense compression of the population,—37 per cent. of the population over 3½ per cent. of the surface. Did we not know the open air, bodily unrestrained, and—shall I say? for I think so—the temperate lives the people live in more open if more frail buildings, the most malignant developments of foul contaminations might be apprehended.

The density of the population varies from 4 persons to an acre in Sion to 759 persons to an acre in Koombarwara. The most crowded section is Koombarwara, in this section there are 759·66 persons to an acre, and only an area of 6·37 square yards to each person; the next section of extreme density is Chukla, having 6·74 square yards to each person. In this table is shown the concentration of population in the twelve sections having the greatest density of population:—

	Houses to an Acre.	Persons to an Acre.	Mean Area for each person in Square Yards.
Koombarwara	20·86	759·66	6·37
Chukla	21·48	718·26	6·74
Kharatalao	35·80	689·02	7·02
Market	23·28	550·11	8·80

1st Nagpada	18·31	316·32	15 29
Mandvee	7·18	257·30	18·81
Fort Northern	8·36	254·31	19·03

Let us take four of the suburban sections which are more or less rural still as a whole; they are Parell, Seoree, Sion and Wurlee; and as in these sections there has been a great increase in population since 1872, there has been a corresponding augmentation of the density of this population around inhabited centres—village clusters.

	1872 Persons to an Acre.	1881 Persons to an Acre.
Parell	9·74	16·74
Sewree	7·95	12·99
Sion	3·78	4·06
Wurlee	8·01	9·88

Deducting the extent of the four sections above, the area left for the urban sections—the

town—is 6,981·64 square acres, to a population of 692,336, that is, 99 persons to each acre, and to each person in the urban sections there are, including all open public spaces, only 48·80 square yards; the minimum space in the urban sections to each person is 6·37 square yards. In the urban sections are included sections having parade or open recreation grounds, and hence the average of space to each person conveys an indistinct and faint idea of the concentration of population within the town.

The density of the population in portions of Bombay, it is important and indeed alarming, looking to disease developments, to know, is very much greater than in Calcutta; on referring to the Calcutta report I find that the maximum density in any one section is 208 persons to an acre, whereas in Bombay the maximum density is 759. In Calcutta, including suburbs, the average is 33 persons to each acre, in Bombay 52·52; the greater concentration of the population in Bombay necessitates more building structure, and is indicated in increased house-piling. Of 23,751 buildings in Calcutta, only 6 per cent. have more than 2 stories against 33·5 per cent. in Bombay (and the buildings in Bombay having more than 2 stories are 3 per cent. greater than in 1872); a further instance of the greater density of the population in Bombay, I may point out, is this; the average number of families to each house is only 1·7 in Calcutta to 5·1 in Bombay, and a further illustration of the greater compression (and of other things also) in Bombay, the proportion of unoccupied to occupied houses in Calcutta is nearly double the ratio in Bombay. The author of the Census Report writes—"It will be seen that, as in 1876, the most densely populated part of the Town is the "Colootola Ward, where there are no less than 208 persons to the acre, next in point of "density come Bow Bazaar 150, Jorabagan 148, Moocheepara 147." Contrast these densities with the concentration of population exhibited in the most densely crowded portions of Bombay.

ABSTRACT showing the Tenures or the Classification of Land in the Town and Island of Bombay, and the Total Area of the Island of Bombay.

Name of Tenure.	Area in square yards by actual measurement.	Remarks.
1.—Pension and Tax	14,070,338	Including Bombay, Mahim and Worli.
2.—Quit and Ground Rent	1,317,860	Do. Fort, Old Town, Colaba, Mazagon, Malabar Hill and Mahim.
3.—Government resumed Land	693,058	New Town.
4.—Leasehold Land	3,252,369	Including Bombay and Mahim.
5.—Sufferance Lease	618,230	Do. do. do.
6.—Government Tocca land and Foras Tocca	6,818,071	Mahim.
7.—Old and New Salt Batty or Foras Land	12,668,675	Including Bombay and Mahim.
8.—Government Land in occupation of the different Departments.	4,898,519	Such as land made over to the Bombay Port Trust, Municipality, land under Public buildings and offices, Imperial properties, Markets, Police chowkees, Public gardens, &c.
9.—Inam Land	2,072,022	Mahim.
10.—Government Waste Lands	9,301,488	Vacant, swamp, hills, esplanades, &c., within Bombay and Mahim.
11.—Charitable	880,313	Such as mosques, burial-grounds, durgas, temples, churches, fire-temples, inns and schools, &c.
12.—Railways	2,146,559	Including G. I. P. and B. B. & C. I. Railway lines, goods stations, workshops and stores, &c.
13.—Private Salt-pans	3,238,420	Matoonga and Sion, in Mahim District.
14.—Government ditto	2,272,982	Do. do. do.
15.—Miscellaneous	4,482,497	Sundry items such as roads, tanks, wells, watercourses, public passages, gowans, dhurbands, ditches, quarries, &c., &c., &c.
16.—Sea-land reclaimed	218,967	Such as land under Prince's Dock, &c.
Total...	68,950,368	Square yards or

	Square miles.	Acres.	Square yards.	
Total Area.....	22	165	4,568	of Bombay.

The classes into which the population have been divided and the religious systems or faiths of the population are closely related, and were it not to make easy statistical and comparative calculations the classes would have been reduced to simpler components, more directly in relation to the broad lines of the religious beliefs swaying the population; systems of human organization being based on common principles or on common utility and arising from a common necessity, the words of Bentham may be recalled, for they are a useful corrective to exalted enthusiasm—"Nature has placed man under the empire of "pleasure and of pain. We owe to them all our ideas; we refer to them all our judgments, and "all the determinations of our life. He who pretends to withdraw himself from this subjection "knows not what he says. His only object is to seek pleasure and to shun pain, even at the "very instant that he rejects the greatest pleasures, or embraces pains the most acute."

The population have been divided into 14 classes, based on broad religious, social or race distinctions.

The next step is to examine the proportion which each class bears to the total population, and to compare that proportion with the results of the Census of 1872, and to ascertain whether there has been any change in the numerical relation of the classes since 1872, and having done this to briefly inquire whether the mortality of each class is in proportion to the number of the class. The first point ascertained, is, the increased preponderance in 1881 of the population following Hindoo systems. Hindoos and Hindoo low- or out-castes (it does not much practically matter which term, whether out-caste or low-caste, is used, so long as what is intended by either term is understood) form now 65·03 per cent. of the population, whereas in 1872 they only formed 63·42 per cent.; the increased preponderance of the Hindoo population is due chiefly to the augmentation of the low- or out-castes; the low- or out-castes are enumerated in 7 classes or tribes, and whereas in 1872 they formed 4·86 per cent. of the population, in 1881 they had increased 56·70 per cent., and risen to be 6·35 per cent. of the total population. Amongst Hindoos relatively to the total population (for except Lingaet and Bhatia there is an increase in the number of each class of the Hindoo population since 1872) there is only an augmentation of the Brahmin population, which in 1872 formed 4·00 per cent. and in 1881 forms 4·58 per cent. of the total population, and which in 1872 forming 6·32 per cent. had in 1881 increased to 7·05 per cent. of the Hindoo population.

The Native Christian population has increased relatively from 3·90 to 3·97 per cent.

The European population has relatively risen from 1·13 to 1·35 per cent.; this may possibly be due in some measure to the enumeration of Eurasians amongst Europeans,—for there is such a tendency,—and an oblivion of race origin and distinction.

The proportion of deaths in each class to the total mortality exhibits an excess ratio of mortality in certain classes. Amongst classes consisting chiefly of immigrant elements numerous reasons may be assigned for an excess mortality; for instance, of the small Jain population of 17,218, only 8·59 per cent. were born in Bombay, and therefore easily the rate of mortality of this small class may be raised or lowered.

There is reason to believe that in proportion to their numbers and to other classes there is a high mortality amongst the Musulman population, but in arriving at any conclusion as to the causes of this fatality we have to estimate not only the mortality arising from the pilgrim immigrants, but also amongst those returning from pilgrimage; we have not sufficiently exact information to make this estimate; I may, however, state that the percentage of deaths of Musulmans to the total deaths is in 1880 less than in 1871, being 24·37 per cent. in the former year to 25·3 per cent. in 1871.

The table following shows the proportion of each Race or Class to the Population as ascertained by Census of 1872 *and of* 1881, *and the proportion of Deaths in* 1880 *by Class or Race to total Deaths:—*

Classes.	Census of 1872.		Census of 1881.		Number of Deaths, &c., in 1880.	
	Persons.	Percentage of each class to the total Population.	Persons.	Percentage of each class to the total Population.	Number of Deaths in each class.	Percentage to the total Number of Deaths.
Jain	15,121	2·35	17,218	2·23	891	4·21
Brahmin	25,757	4·00	35,428	4·58	711	3·36

The next step is to examine the information collected through the Census regarding each class; each class will be referred to in the order of its numerical importance. The largest class of the population are those following Hindoo systems of faith—Hindoos.

Hindu.—Hindus are enumerated in 78 castes, and the outcaste or low-caste population in 7 classes; the population following Hindu systems of faith, and consisting of 502,851, are therefore arranged in 85 classes, they form 65·03 per cent. of the population; dividing the Hindu people into five broad divisions, we find that each division occupies the place in the total population, numerically speaking, shown in the table below :—

Percentage on total population.

	1872	1881
Brahmin	4·00	4·03
Lingaet	·19	·15
Bhatia	1·47	1·22
Hindu of other castes	52·90	52·73
Hindu low or outcaste	4·86	6·35

In this calculation, 4,229 Sonárs, enumerated as Daivadnya Brahmins, are not included amongst Brahmins; but, including Sonárs, the relative strength of Brahmins to the Hindu population is 7·05 per cent. The number enumerated as Hindus, simply, in 1881, is only 10,712, and is much fewer than in 1872; for in that census 39,711 persons were returned as Hindus without any caste being specified; those Hindus whose caste was not ascertained are included amongst Hindus of other castes. Examining the returns of caste (and I may here state that a rapid census enumeration of caste is necessarily imperfect) we find that 23·90 per cent. of the Hindu population, (29·47 per cent. of "Hindus of other castes" division) are enumerated as Maráthás, and 11·25 per cent. as Maráthá Kunbis; the Maráthá family form therefore the largest distinct class of the Hindu population, and they are a strong element in the population of Bombay—forming 22·86 per cent. of the total population. There has been an enormous expansion of the Maráthá population since 1872, and this expansion is chiefly due to wider fields of employment and the expansion of the trade of the city; whether in the prolonged labour of the factory or in the severe toil of the dock, the frugal and brave-hearted Maráthá is the chief toiler.

Brahmins are enumerated in four orders in this census; the proportion each order bears, to the Hindu population, is shown in this table :—

	Per cent. to Hindu population.
Brahmin Gujaráti	2·52
„ Maharáshtra	2·55
„ Kanára and Telingá	·17
„ Gaud and Bengáli	·07

While this able and powerful class are more numerous than in 1872, they are, (excluding Sonárs—Daivadnya Brahmin), relatively to the total Hindu people, weaker in numbers. There is only one point to mention, amongst Kanára and Telingá Brahmins the females were more numerous in proportion than the males. It may be mentioned, that all Brahmins are divided into Panch Dravids and Panch Gauds.

The number of ascetics or devotees enumerated is larger than in 1872; perhaps, in a city solely devoted to wealth-production the existence of a class of men or women who, as a class, have torn themselves away, from world—pleasure and ambition,—is not altogether an evil or a bad influence; to 1,333 devotees in 1872, 1,947 are enumerated in 1881.

I have already referred to the great, and perhaps ominous, increase in the outcaste population. Of the outcaste tribes the Dheds and Mhárs have increased most. The Dheds are twice as numerous as in 1872, being 5,385 to 2,555 in 1872, and the Mhár population is now 27,320 to 17,136, Mhár and Parvari, in 1872. The class engaged in handling leather have increased from 2,557 Chámbhárs in 1872 to 6,182 in 1881.

In the table, following, is shown the distribution of the outcaste population in each

section of the city; the preponderance of the outcaste races in any section is a danger; whether, owing to neglect of the noble abstinence and sanitary rites, constituting religious or caste rites, (for most religious rites are sanitary rites), and precautions of the high caste, or to poverty and the degraded conditions under which they live, they are a formidable danger to the public health. I cannot but regard, from a sanitary point, any relaxation of caste discipline—without some equally binding discipline being imposed in its place—as a most serious danger to the vitality of the population; with the removal of the restrictions, religious or caste rites place on the desires, the existence of the population would be difficult.

Proportion of Hindu Low-Castes, by Sections, to Total Population of each Section in 1881 *and* 1872.

I need not refer to the hereditary occupations of each caste, for, owing to the pressure of life, there are only a few occupations that will not be followed by any caste, so far as may be observed in this city. Hindus have a very great capacity for adapting themselves to circumstances and necessities.

Mussalman.—Although the people of Islam are not the most numerous nor the wealthiest, they are a most powerful element in the population; they form 20·53 per cent. of the population; the classification of Muslimin is imperfect; it is the classification of 1872; had it not been to establish a comparison with figures of 1872, it would have been abandoned. Muslimin are divided in the Census classification into the following 10 classes:—Arab, Irâni, Pathân, Memon, Konkani, Khoja, Borah, African, Saiad and Shekh; it may, readily, be seen how easily errors would arise under this classification, and, in fact, it would be difficult to avoid errors; to avoid many errors, laborious care has been necessary; a Mussalman might be an Arab and a Saiad or an Irani and a Saiad; and even in the Report of 1872 there appears to have been some misconception, for I read (at page 39 of the Census Report) that, "In Bombay the Arabs, Memons, Konkani Mussulmans, Pat'thâns, Shekhs, and Sayeds are Sunis, whilst the Boras, Khojahs, and Moghuls are Shiahs"; the inference to be drawn from this sentence, if it implies anything, is obviously this, that there are no Saiads amongst Shi'ahs; I need scarcely say, there are amongst Shi'ahs numerous Saiads or Sadat of illustrious descent. Yearly, from Persia, numerous adventurous Saiad youth and aged men pass through this city, and to them the hospitality of the Persian population is ever profuse.

Of the Muslimin 81·58 per cent. are Sunni, and 17 per cent. Shi'ah. In this table is shown the Mussalman population—under the two broad divisions of Sunnite and Shiite:—

MUSSALMAN.

Population of Bombay.	Mussalman Population.	Sects.	Number in each Sect.	Percentage of Sect to total Population.	Percentage of Sect to Population of Religion.
773,196	158,696	Sunni	129,459	16·75	81·58
		Shi'ah	28,213	3·65	17·78
		Unspecified	1,024	·13	·64
		Total	1,58,693	20·53	100·00

For all political and social purposes, there has been, latterly, a gradual drawing together of Sunnite and Shiite; this may be due to the weight of external pressure, or to the necessity of union to preserve common interests; and moreover, in estimating the causes of antagonisms that have existed between Sunni and Shi'ah in this city, a careful distinction has not been drawn, by writers, between antagonisms of class or family growth and of dogmatic origin; whenever a class of Muslimin, for political or social reasons, adopt a line of forcible action, there is an unfortunate tendency, on the part of the public, to attribute their action solely to religious motives and faith-inspiration. Muslimin may well complain of the inaccuracy of the judgments passed on them; to take, for example, an instance historical in Bombay: in the judgment of Sir Joseph Arnould, in the case between the family of Aga Khan and some Khojahs, who seceded, there are the following passages, quoted in the Census Report of 1872:—

"This tragic event stirred the heart of Islam to its very depths, and even now separates the Mahomedan world into the two great and hostile divisions of the Sunis and Shias,—of the Sunis, who bless the memory and are zealous in the cause of Ayesha and Abubeker and Omar and Osman—and of the Shias, who execrate the memory of the first three Caliphs, and, hardly in a less degree, that of Ayesha herself; who by degrees have come to regard Ali as something more than mortal, as not only the Vicar, but, in some mystic sense, an incarnation, of God, who venerate Fatima as the first among women, and yearly celebrate the martyrdom of Hoosein, not only with the outward signs, but with the inward reality of lamentation and mourning and woe."

"The Suni, in India at least, celebrates the Mohurrum with ribald buffoonery, the Shia with heartfelt lamentation. In a word, agreeing in reverencing Mahomet as the Apostle, and the Koran as the word, of God, the Sunis and Shias agree in little else except hating each other with the most cordial and bitter hatred."

This description, poised in figurative language, is intended to emphasize the broad distinctions between Sunnite and Shiite; but in this passage not only is there, apparently, an inaccuracy, but there is oblivion of an important fact; I need scarcely say, that Sunnite and Shiite alike reverence the memory of the noble 'Ali; this vital fact the learned Judge overlooked or omitted, and, had it been told, it would have very much affected the import of the description, although lessened its picturesqueness. Speaking generally, the Sunnite accepts all the Shiite accepts, although the Shiite does not accept all the Sunnite accepts. As to the second statement, that the "Suni, in India at least, celebrates the Mohurrum with ribald buffoonery," this statement is inaccurate; to Sunnite and Shiite alike, the Mohurrum is a sacred month, and the anniversary of the death of the Imam Hoosein, an occasion of mourning and sorrowful memories; and further, both to religious Sunnite and Shiite, the Taboot processions, or in Sir Joseph Arnould's figurative language "ribald buffoonery," are not agreeable, and, the processions are also the cause of dissensions amongst Sunnites.

If statements inaccurate or vague, are found in a judicial statement, we are not surprised on finding, in a well known guide-book, an imaginative correspondent writing of Shiites, during a period of disturbance, thirsting to "drink their blood (of Sunnites) from the hollow of our hand and wash the place they stood upon." It is only natural that writing of this wild description causes very great irritation and is remembered with bitterness.

In this table is shown the distribution of Muslimin by classes; each class is affected by an annual immigration, and hence a male preponderance; it will be seen that of the distinct communities the Memon are the most numerous:—

Mussulman.	Number enumerated on the 17th of February 1881.	Ratio per cent. to total Population of Bombay.	Ratio per cent. to total Mussulman Population.	Proportion of Males to 100 Females.

There are, however, amongst Muslimin in Bombay other sects; there are small bodies who hold peculiar opinions; there is one sect, of Hyderabad prominence, who have a burying-ground in Mazagon, and who call themselves Ghair Mohdia, and who proclaim that the Mohdi has come—(Amada Guzashta); when I first mentioned the existence of this sect to some well-known citizens, they doubted, till they had made inquiries, that such a sect existed; this sect was enumerated but not tabulated.

It is difficult to enumerate those who are popularly called Wahabee; there are, however many stern Unitarians.

The important community of Borahs, are only briefly alluded to in the extract from Dr. Wilson's description, published in the Report of 1872, and therefore, for information regarding the community, I naturally referred to the Hon'ble Mr. Budroodin Tayebjee,

an accomplished Mussalman, who not only took an interest in the Census, but gave me help during the enumeration, and I requested him to give me a note on the growth of the Borah community. Mr. Budroodin has, at some trouble, prepared for me the information—following; these notes, drawn up in a concise, clear form, will be of interest and indeed of value:—

"The Borahs are a section of the Musulman community with active mercantile "tendencies. They are mostly settled in the different cities of Guzerat and Kattiwar. Most of "them carry on commercial dealings, on a smaller or a larger scale. In shrewdness and "business instincts they are not unlike the Khojas and the Memons. In pursuit of commerce "they have spread themselves over almost every country of Asia, and are largely to be found "on the coasts of Arabia and Africa, to say nothing of China, Siam, &c.

"The Borahs appear to be the descendants of very early converts to Islam in India, and "can trace direct connection with the missionaries sent out by the Fatimite Califs of Egypt "in the 4th and 5th centuries of the Mahomedan era.

"The names of these pioneers of Islam in India were Abdullah Akber, Abdullah Asghar "Ahmed and Yakoob, who originally started from Yemen, and settled for some time at Cam-"bay, where they made a considerable number of converts. They then proceeded to Pattan "and Aurangabad and other places in the interior of India, where their doctrines appear to "have steadily gained ground.

"There are four principal divisions amongst the Borah community, *viz.*, Sunni, Aliya, "Dawoodi and Sulemani. The Dawoodi division, which is probably the largest, separated "from the Sulemani section, which is numerically the smallest, about 300 years ago, owing "to a dispute as to who was the rightful Dai—one section of the community preferring "Dawood, while the other followed Suleman.

"The present head of the Dawoodi Borahs is Mulla Sahib Najmudin, whose head-quarters "are at Surat, while the chief of the Sulemani community is in Yemen, in Arabia.

"A very large portion of the Sulemani community, numbering many thousands of "people, is settled on the western coast of Arabia, where their spiritual head exercises inde-"pendent authority over a considerable tract of territory, having for his subjects not merely his "own religious followers, but a large number of other people belonging to other distinct sects of "Mahomedans.

"The Sulemani community, though so small, that it scarcely numbers 1,000 souls in all "India, is interesting from the high social and intellectual eminence which some of its members "have attained. The late Mr. Tyabji Bhoymiya, the father of the Hon'ble B. Tyabji and "Mr. C. Tyabji, was the first Indian gentleman who ventured to send his sons to England for "education. It is remarkable that the first Mahomedan barrister, the first Mahomedan solicitor, "the first Mahomedan doctor, and the first Mahomedan civil engineer all belong to this "enterprising little community.

"The Sulemani community has mostly settled in Bombay, Surat, Baroda, Cambay, "Ahmedabad, and Hyderabad in the Deccan, though its religious head and the largest numbers "of its followers are to be found in Yemen, in Arabia."

In the Census of 1872, the important community of Konkani were not enumerated separately, and are not referred to in the Report of 1872; I have asked Mr. Mahomed Ali Rogay, who has been an advocate and supporter of liberal Mussalman interests, to give me a few notes on the Konkani community, and he has written for me an interesting account, from which I have made the following extracts:—

"*Konkani Mussalman.*—The popular notion among themselves is that their ancestors "came in a body to this part of India from Kufa to escape from the tyranny of Hjaz Ibn Yusuf—"that is, about 800 years ago. But that belief is not sustained on a close examination of the "names, manners, and customs of the people; if they came it is only very few of them, as "few families up to this day have Arabic surnames and can trace their genealogy. The most "probable view one can safely take, is, that a very few Arabs came from Kufa and intermarried

"with the people of the Konkan, and thus in course of years their descendants multiplied into a "large number; as some of the surnames of the Konkanis, up to this day, correspond with those "of Hindus. These people traded largely, and as soon as Bombay was populated came and "settled here, and carried on great trade as shipowners, &c., and amassed wealth. But now "they have declined in affluence owing to circumstances, extravagance in litigation and "marriages. Most of the Konkanis are Shafias, and therefore it is most probable that the "Arabs who came from Kufa were Shafias, as they are up to this day. They populated "the coast, like the Malabaris of Malabar, who also claim to be Arabs."

"The physiognomy of some Konkani Mahomedans is Arabian, both of men and women, "but such are the exceptions; generally they do not differ much from the Hindu population "in appearance. Konkani Mahomedans as a rule have surnames, some of which are professional "and denote the names of villages they belonged to, while others are meaningless. All surnames "end in Indian *e* or *y*. The principal towns in which Konkanis are to be found are Bombay, "Tanna, Kalva, Callian, Bhewundy, Panwell, Taloja, Bancot, Chiploon, Chawool, Nagotna, "Oorun, Penn, Bandora, Rutnagherry, Alibaug, &c. They generally marry within their own "circles, and are very particular about blood, but the rich can make their way as in all other "classes of the human race."

Parsee.—The followers of the Mazdiasnian religion now number 48,597, to 44,091 in 1872, equal to an increase of 10 per cent. in the Parsee population since the last Census. This enumeration, has dispelled a delusion—that the Zoroastrian population were dying out; the mortality of the people indicated, what this Census has demonstrated, that the Parsee population possess a high vitality; the energy of this people, is displayed equally in the keen contest of commerce and pursuits of gain, and in enthusiasm for the cause of civic advancement. Although, no Zoroastrian is now so pure that he can attract fire, as it is said holy Mobeds once could in ancient times, from the ethereal void (although ancient times have passed away and ancient faiths have changed, ancient human credulities and heart-yearnings have not passed away), still, the energy of the people is manifested in this practical age in every occupation. I have here referred to an incident (worthy of as much credit as many other ancient incidents more readily believed) in the wanderings of the Zoroastrian people, described in a clever lecture by a Theosophist, on the spirit of the Zoroastrian religion, in language so glowing, that the animated description would be worth giving a place to in any other volume than the Census Report.

Of the Zoroastrian people, 89·08 per cent. belong to the division of Shahenshahis and 10·92 per cent. are Kudmis. The Parsee population is made up of, 25,315 males and 23,282 females, 108 males to 100 females; by the Census of 1872 the proportion of the sexes was 110 males to 100 females. The Zoroastrian population, in the two divisions, is exhibited in the following table:—

	Persons.	Percentage to Population of Island.	Percentage to Zoroastrian Population.
Shahenshahi.....	43,292	5·60	89·08
Kudmi	5,305	·69	10·92
Total	48,597	6·29	100·00

Mr. Dosabhoy Framjee thus describes the cause of the division of the Zoroastrian population:—"They do not differ on any point of faith; their form of worship and religious "ceremonies are the same in every respect. They freely mingle in society and in every relation "of life, and the dispute is solely confined to a quarrel as to the correct chronological date for "the computation of the era of Yezdezird, the last king of the ancient Persian monarchy. The "chief importance of the matter arises from the fact that a Parsee when he prays has to repeat "the year, month, and day on which he offers his petition: therefore the mention of the date "is the only distinction between the prayer of a Kudmi and that of a Shenshoy, and the same "difference exists in the keeping of the festivals, which are common to both sects."

Buddhism.—The necessity, of treating religion and class together, becomes apparent when we come to examine the enumeration of Buddhists. Buddhism is rather a noble philosophical system than a religion. It has in it, according to one able authority, "the proudest assertion ever made of human freedom;" a Buddhist is a follower of the Lord Buddha; Buddha, it must be remembered, is the expression of a condition of mind or perfection, and applied to the Prince of Kapilavastu, Gautama, on account of his perfection, his knowledge—the supreme knowledge of the cause and secret of human misery. Buddhas have been and will be. While a Buddhist does not believe in a personal divinity, he seeks the highest goodness, and peace; and he is enjoined to accept nothing on Faith; the Law of Buddhism is justice. This portion of the report, cannot be concluded without a reference to Arnold's noble study of Buddhism; in his great work "the Light of Asia" he has, in melodious measure—and sweetest cadence, expounded the sublime truths taught by Gautama, and told the story of the great renunciation in strain the most pathetic; the lines which follow give a vivid idea of the compassion and toleration of Buddhistic philosophy :—

"Manifold tracks lead to yon sister-peaks
"Around whose snows the gilded clouds are curled;
"By steep or gentle slopes the climber comes
"Where breaks that other world.

"Strong limbs may dare the rugged road which storms,
"Soaring and perilous, the mountain's breast;
"The weak must wind from slower ledge to ledge
"With many a place of rest.

"So is the *Eightfold Path* which brings to peace;
"By lower or by upper heights it goes.
"The firm soul hastes, the feeble tarries. All
"Will reach the sunlit snows."

By this Census 169 Buddhists were enumerated.

The essential principles of Buddhistic teaching are accepted by Jains. The tenderness of the Jains for life is much scoffed at; to many their tenderness for the life of the weakest creature, lest it should be killed on its upward way, is most touching. The Jain population now number 17,218, to 15,121 enumerated in 1872, and there are 287 males to 100 females, whereas in 1872 there were 413·27 males to 100 females; the Jains form 2·23 per cent. of the population, and there are only 8 per cent. born in Bombay; the increase in the population is chiefly in females. Mr. Goculdass Jugmohundass has kindly prepared for me the following notes on points of interest connected with the Jains :—"The Jainas form one of the sects of the Indian Buddhists. They are "mostly to be found in India. A very small number of them live in Aden, Burmah and "China, whither they are said to have gone for purposes of trade and commerce. The Jain "religion was promulgated by Mahávira Swámi, the last of the 24 Saints or Tirthankaras "(as they were called) of the Buddhists. The Jainas do not believe in a personal Providence, "and the Indian Jainas do not follow the ancient precepts of the Vedas, because they disclaim "their divine authority. The Buddhists believe in the eternal progress of matter as the "flowing of a river's water. The Jainas, though disbelieving in the existence of a personal "Deity, believe in the existence of soul, which they consider as separate from body, and "eternal, though the body changes. The Jainas have no hereditary priesthood. Their priests "are called Jatis or Gorjis, who wear large, loose, white mantles, with their heads bare, and "their hair and beard clipped, and tie a piece of cloth over their mouths, and carry with them "a brush (called chamri) to sweep away animals. The Jainas pay respect to the images of Páras-"náth and Mahávira. They are very anxious to take care of animal life, and take the necessary "precautions for so doing, by not drinking water without passing it through a piece of cloth, "preferring to drink hot to cold water, avoiding to take food or drink after sunset, using as "little water as possible, sweeping every place before sitting down, sometimes tying a thin

"piece of cloth (called Mumti) over their mouths. Their chief books of authority are Shákya "Swliti by Shakya Sinha on Buddhism, Kalpa Sutra on Jainas."

There are few more touching or pathetic sights than, on some wave-washed point of the foreshore, reverent men prostrating themselves before the Unknown, and, often, as the light of day begins to darken, reverent human forms—bowed to the earth,—and to the light passing away,—may be seen—more sublime spectacle than the most gorgeous fane!

Christian.—The number of Christians has increased from 34,724 in 1872, to 42,339 by this Census of 1881,—an increase of 21·93 per cent. in the Christian population since the last enumeration, and they now form 5·47 per cent. of the population. The Christian sects have been enumerated in all fullness, and 11 have been discriminated. The most numerous of the sects are Roman Catholics, and their organized strength is seen and manifested in the spacious educational and devotional edifices created through the ability and labour of the Society of Jesus; 75·90 per cent. of the Christian population are Roman Catholics. The distribution of the Christian population by sects is shown (amongst Christians by sect, 5 Unitarians are not included) in this table.

Population of Bombay.	Population of the Christian Religion.	Sects.	Number of Persons in each Sect.	Percentage of Sect to total Population.	Percentage of Sect to Population of Religion.

Amongst the European population, we are prepared to find particular beliefs and special information given in the Schedules; one person, returned himself as an Universalist, and three old men avowed that they were Atheists; it is noteworthy, that with the exception of an able woman,—a Buddhist,—all who avowed themselves as being without the pale of revealed religion are men; one Atheist, an aged man of 61, gave us some verses on his Schedule, advocating his opinions, so that there might be no delusion as to his views,—he was the only one who ventured to poetize on a Schedule.

Jews.—The Jewish people have increased from 2,669 in 1872 to 3,321 in 1881, and they form ·43 per cent. of the total population. It will be observed, that 68 per cent. of the Jewish population are not of the Beni Israel stock; 3·49 per cent. of the Jews proper were born in Europe.

Education.

Education.

The importance, of procuring the fullest information on the state of education of the people was not lost sight of, and information, complete in many respects, has been obtained. Extensive tables, exhibiting full information regarding the education of the population, have been prepared. The education of the population, in each division of the city, is shown, so, that the extension of education in districts may be contrasted with the diffusion of education amongst classes; ignorance, must be treated, by the direct application of educational measures.

There has been very considerable progress, in the education of the population, since the Census of 1872; the progress has been greater than is indicated, for the average has been lowered by immigration of illiterate toilers; in 1872, 5·08 per cent. of the male population and 1·86 per cent. of the female population were under instruction; but in 1881, it will be observed, that

This content downloaded from

All use subject to https://about.jstor.org/terms

7·64 per cent. of the male and 2·87 per cent. of the female population are under instruction. Advancing to the next period we observe, that in 1872, of the male population 17·57 per cent. and of the female population 4·06 per cent. were not under instruction, but able to read and to write; but in 1881, the proportion of males educated has risen, from 17·57, to 24·90 per cent., and the ratio of females, not under instruction but able to read and write, has risen, from 4·06, to 6·33 per cent.; the proportion of females uneducated, in 1872, was 94·06 per cent., and, in 1881, it is 90·80; the proportion of males uneducated, in 1872, was 77·34 per cent., and, in 1881, it has fallen to 67·46 per cent.

Percentage, at all Ages, to the Total Population of each Sex.

		Under Instruction at School or elsewhere (Pupil).	Not under Instruction but able to read and write (Educated).	Not under Instruction and unable to read and write (Illiterate).
1881	Males	7·64	24·90	67·46
	Females	2·87	6·33	90·80
1872	Males	5·08	17·57	77·34
	Females	1·86	4·06	94·06

The progress of education (always remembering the immigration factor) is more fully shown in this Table; it will be seen to have been general in these five broad divisions of the population.

	Males.						Females.					
	Pupil.		Educated.		Illiterate.		Pupil.		Educated.		Illiterate.	
	1872.	1881.	1872.	1881.	1872.	1881.	1872.	1881.	1872.	1881.	1872.	1881.
Jain	4·50	9·39	44·94	62·98	50·55	27·63	0·78	1·30	1·93	3·80	97·28	94·90

Total	5·08	7·64	17·57	24·90	77·34	67·46	1·86	2·87	4·06	6·33	94·06	90·80

I think, there is evidence to indicate, that female education has progressed more than is represented in this table; the difference in education amongst males and females is most marked at adult periods of life, and it is possible, that this difference is due, in some measure, to the immigration of female workwomen; the degree of education of males and females, varies least at early periods of life; under 6 years of age, 8·81 per cent. of boys and 3·10 per cent. of girls are undergoing instruction; between 6 and 15, 9·48 per cent. of boys and 6·35 per cent. of girls are able to read and write but not under instruction; but over 15, only 7·84 per cent. of women to 32·06 per cent. of men have been educated.

Examining education, according to faith or class, we find, that education is most extended amongst the Parsee people; female education is more diffused amongst the Parsee population than any other class. There appears, to be a clear perception of the advantages of education in the Jain community, for male Jains, but the education of female Jains is, apparently, neglected.

Under 6 years of age, the largest number of male and female children under instruction, are Christian—18·77 and 15·14 per cent.; the next largest number, of male children, are Jains, 15·20 per cent., but the number of female Jain children, under instruction, is

This content downloaded from

only 1·06 per cent. Contrast these results, with education at an early age amongst Parsees: we find, 12·20 per cent. Parsee male and 8·84 per cent. female children, under 6 years of age under instruction; between 6 and 15, the number of Parsee male and female children, under instruction, is much larger than in any other class. Over 15 years of age, the smallest proportion of illiterate, either male or female, is found in the Parsee population.

Religion or Sect.	Percentage calculated on the Population of each Class by Sex at all Ages.					
	Under Instruction at School or elsewhere (Pupil).		Not under Instruction but able to read and write (Educated).		Not under Instruction and unable to read and write (Illiterate).	
	Males.	Females.	Males.	Females.	Males.	Females.

Jew	17·24	10·36	40·65	16·60	42·11	73·04

The state of education, of Christians, Muslimin and Hindus, in Bombay and Calcutta is shown in this table, but, without exact information of the fluctuation of the population in each city and of the education of the elements of fluctuation, it is difficult to draw any inference from it; the higher state of education, amongst Muslimin in Bombay, is striking; there is an obvious reason for the lower state of education amongst Christians in Bombay.

Civil or Conjugal Condition.

Civil or Conjugal Condition.

The conjugal relations of the people must always be questions of importance and interest; a change is observed in operation since 1872; the bonds, of matrimonial tendency and compulsion, appear to be slightly relaxing, although, the preponderance of young may have affected the statistics; the proportion of unmarried in 1881, is greater than in 1872; although it decreases at each age-period after 10; the proportion of husbands to wives is 27 per cent. less than in 1872, and, except amongst Jews, the excess of husbands over wives, in each class, is less than in 1872,—important development and outgrowth of new conditions,—and the ratio of husbands in this community now approaches the proportion in the permanent Parsee population.

	1872.	1881.
Percentage of unmarried males on total males	32·43	36·82
Percentage of unmarried females on total females	27·57	28·72
Husbands to 100 wives	182·82	155·41

This content downloaded from 171.76.87.42 on Wed, 07 Feb 2024 05:57:38 +00:00
All use subject to https://about.jstor.org/terms

There is a more striking reduction in the proportion of husbands and wives to unmarried males and females.

	1872.	1881.
Proportion of husbands to 100 unmarried males ...	196·24	158·07
Proportion of wives to 100 unmarried females	206·27	196·46

By this Census, 57 per cent. of the population are married, 33 per cent. single, and 8·8 per cent. in a widowed state; 58 per cent. of the male population are married, 36 per cent. single, and 4·9 per cent. widowed; 56 per cent. of the female population are married, but 14—very nearly 15—per cent. of the total women are widows. To each 100 unmarried men there are 51 unmarried women; this conveys an idea of the conjugal prospects of the sexes.

In this Table is given an analysis of the Civil and Conjugal Conditions of the Population:—

	Percentage on Total Population.			Percentage on Total of Sex.	
	Male.	Female.	Both Sexes.	Male.	Female.
Single	22·1	11·5	33·6	36·8	28·7
Married	35·0	22·5	57 5	58·2	56·4
Widowed.....	2·9	5·9	8·8	4·9	14·8
Not stated	·1	·0	·1	·1	·1
Total...	60·1	39·9	100 0	100·0	100·0

This table is of value as exhibiting the variation of Civil and Conjugal Conditions in each class since 1872.

Calculations made on Total of each Class by Sex (excluding "not stated").

Classes.	Males.						Females.						Ratio of Husbands to 100 Wives.		Classes.
	Unmarried.		Married.		Widowed.		Unmarried.		Married.		Widowed.

The proportion of women married between the ages of 20 and 40, is equal to 83·15 per cent. of the total women between these ages; but, the proportion of women married between 20 and 40, is equal to 52·21 per cent. of the total wives, and 29·46 per cent. of the total female population.

It is interesting to contrast the civil and conjugal conditions of the populations of Calcutta and of Bombay; the most striking difference, in the civil and conjugal condition of the two populations, is the large number of women widowed in Calcutta:—

Percentage on Total of Sex (excluding "not stated").

	Bombay.		Calcutta.	
	Males.	Females.	Males.	Females.
Single	36·8	28·7	32·2	21·7
Married	58·3	56·5	63·2	42·7

There are some interesting particulars to be extracted in connection with the ages of those married and widowed. There were 43 husbands and 176 wives under 6 years of age; and 1,196 husbands and 3,592 wives between 6 and 10 years of age. Of the boys, under 10 years of age, 1·5 per cent., and of the girls 4·8 per cent., were married.

1 boy and 3 girls were widowed under 6 years of age; 10 boys and 75 girls were widowed between 6 and 10 years of age; 11 boys and 78 girls were widowed under 10 years of age.

Between 10 and 15 years there were 7,407 husbands, equal to 16·8 per cent. of the male population between 10 and 15; and 19,755 wives, equal to 66·3 per cent. of the female population between 10 and 15. Two of the wives, between 10 and 15, were Europeans. Between 10 and 15, there were 86 widowed boys and 358 widowed girls. Between 15 and 20 years of age, there were 32,187 husbands, equal to 55 per cent. of the males enumerated, and 39,667 wives, equal to 90·7 of the women, between 15 and 20 years of age; between 15 and 20, there were 591 widowers and 1,621 widowed girls. A point of interest may be mentioned, that widows exceeded the number of widowers at all periods of life; at 60 and upwards 3,469 widowers to 6,136 widows.

After 20 the husbands are found to be largely in excess of the wives.

20	and	25	50,218	husbands to	34,048	wives.
25	„	30	53,465	„	27,690	„

Mother-tongue.

The information regarding languages is an entirely new, and, I think, will prove, an interesting feature in the Census Report of 1881; it is of interest, certainly, to possess information regarding the mother-tongues of the population. Nothing better illustrates the diverse elements in the population than the number of languages spoken—placed in 27 classes. 50 per cent. of the population speak Maráthi, 20 Gujeráthi, and 11 per cent. Urdu—or Hindustáni commonly called.

The Languages of the People and their Distribution by Classes and Proportion to Total Population of each Class.

Birthplace.

Birthplace. Perhaps nothing indicates, more clearly, the modern and rapid growth of the City of Bombay than the place of Birth of its inhabitants; only 27·76 per cent. of the population were born in the Island and City of Bombay, whereas, in 1872 the proportion was 31·13 per cent.; next to the City of Bombay the greatest number of inhabitants came from Ratnágiri; 16·32 per cent. of the population were born in Ratnágiri, 8·92 per cent. in Póona, 5·87 per cent. in Satára, and 5·86 per cent. in Cutch.

In this Table is shown the 7 Districts supplying the largest numbers to the population.

Birthplaces.	Percentage of Males to total Males.	Birthplaces.	Percentage of Females to total Females.	Birthplaces.	Percentage of Persons to total Persons.
1. Bombay City	24·54	1. Bombay City	32·62	1. Bombay City	27·76
2. Ratnágiri	17·05	2. Ratnágiri	15·22	2. Ratnágiri	16·32
3. Poona	8·19	3. Poona	10·03	3. Poona	8·92
4. Satára	6·03	4. Cutch	5·77	4. Satára	5·87
5. Cutch	5·93	5. Satára	5·60	5. Cutch	5·86
6. Surat	4·90	6. Surat	4·23	6. Surat	4·63
7. Káthiáwár	4·50	7. Káthiáwár	3·77	7. Káthiáwár	4·21
Total	71·14	Total	77·24	Total	73·57

Of the various elements, coming together, in the population, we would expect the largest proportion of women amongst the population born in Bombay; there are 113·35 men to 100

The Parsee population are more essentially the people of Bombay than any other class of the population; 70·32 per cent. of the Parsee population were born in Bombay; next to Parsees, Eurasians have the largest numbers born in Bombay.

In this Table is shown the Percentage of each Race born in Bombay; and it will be observed, that a larger proportion of Europeans than of some Hindoo classes have been born in Bombay.

Percentage of persons born in Bombay to total number of each class:—

70·32	per cent.	Parsees	were born in Bombay.
48·89	„	Eurasians	do. do.
38·42	„	Jews	do. do.
33·11	„	Musulmans	do. do.
31·52	„	Native Christians and Goanese.	
25·46	„	Bhatias	do. do.
23·00	„	Hindoos of other Castes	do.
22·92	„	Europeans	do. do.
20·18	„	Hindoo low-Castes	do.
19·28	„	Lingaets	do. do.
18·05	„	Brahmins	do. do.
13·02	„	Buddhists	do. do.
10·01	„	Negro Africans	do.
8·59	„	Jains.	do. do.

It will be found interesting, to examine the information regarding the place of birth of the largest classes.

Of the European population, 51·14 per cent. were born in Great Britain. Of Eurasians, 48·89 per cent. belong to Bombay city, 8·90 per cent. were born on the Madras Coast, and 8·13 per cent. in Poona; of Native Christians, 55·45 per cent. were born in Goa and the other two Portuguese possessions.

Of Jains, 39·92 per cent. were born in Cutch.

Of Brahmins, 18·18 per cent. were born in Ratnágiri, and 18·05 per cent. in Bombay. The greatest number of Bhatias, born in one place, were born in Cutch,—39·63 per cent.

Excluding Brahmin, Lingaet and Bhatia, of the general Hindoo population, 23·83 per cent. were born in Ratnágiri and 23·00 per cent. in Bombay.

Of Muslimin, 33·11 per cent. were born in Bombay, and 9·72 per cent. in Cutch.

The greatest number of the Parsee people are Bombay-born; Surat, next in point of numbers as to place of birth, following Bombay, is the birthplace of a large number,—22·80 per cent.

An equal number of Hindoo low- or out-castes were born in Bombay and Poona,—as many as 20·18 per cent.

Occupations.

Occupations. I have had to alter and condense this chapter, as, opinions which I had formed, on a first study of the tables exhibiting the occupations of the population, have been modified by a further examination of the occupation statistics. The occupations of the population are collected in 7 classes, and each class has been arranged into orders, constructed so as to receive occupations having general similarities. However clear, a classification of occupation may be, the application of it is difficult, for, occupations will not be either properly or clearly stated; and the classification of imperfect information must be imperfect. Unless, a classification is clear, there is danger of confusion and error. Factory workers have been classified on broad lines indicating sanitary aspects of factory occupation in this city.

The first point that presents itself, on examination of the statistics, is the high ratio of men and boys engaged in definite occupations, and the low ratio of adult women; and if the classes, into which the occupations of the population have been divided, could be accepted as definite limits, within which the occupations of the population must have been grouped, the productive agency amongst men must be considered to be in a high ratio, and amongst women it must be reckoned to be in a low ratio; the ratio, of boys working is high, and of girls low, although, it must be remembered, that the proportion of girls to all female workers is comparatively high.

	Ratio of Children under 15 occupied.	
	To total Workers of each Sex	To total Children of each Sex.
Males	7·37	18·39
Females ...	11·61	6·52

This return will be found interesting.

Classes.	Percentage on the total Population of each Sex.		Percentage on the total Workers of each Sex.	
	Males.	Females.	Males.	Females.
I. Professional	5·27	0·95	7·71	4·82
II. Domestic	10·49	2·59	15·34	13·16
III. Commercial	13·14	0·11	19·21	·57
IV. Agricultural and Pastoral	1·95	0·36	2·84	1·82
V. Industrial	22·06	9·31	32·27	47·24
VI. Indefinite	15·47	6·38	22·63	32·39
VII. Miscellaneous	31·62	80·30		

To occupations, which can neither be strictly called Professional, Domestic, Commercial, Agricultural or Industrial, but of a Miscellaneous character, 51·04 per cent. of the population belong, and of the population forming this 51·04 per cent., 62·75 per cent. are females; it must be remembered, however, that of the number enumerated under Class VII. 51·97 per cent. are children. Industrial occupations are followed by 16·98 per cent., and Commercial pursuits occupy 7·94 per cent. of the people; the Professional classes, form 3·55 per cent. of the population; 7·34 per cent. of the population, are engaged in Domestic work; in occupations of an Indefinite nature 11·84 per cent. are employed. In the Industrial class, are included 32·27 per cent. of the male workers, and 47·24 of the females, who labour; and in Indefinite occupations 22·63 per cent. of the male and 32·39 per cent. of the female workers; in the Professional and Domestic classes, the proportion of male and female workers is more nearly equal.

Of the female population, 80 per cent. come under Class VII., Miscellaneous, and, this is chiefly due to 40·82 per cent. of the female population under Class VII. being children, and, in some measure, to the difficulty of classifying the occupations of females, and, partly, to the limit of distinct female employment, and, partly also due, to a delicacy on the part of females in stating occupations. A very large proportion of the male population also come under the class of miscellaneous occupations; 31·62 per cent. of the male population are placed in Class VII., but of the male population in this class 70·77 per cent. are children.

Of the Professional class, 5,165 males and 489 females are connected with the profession and service of religion, and of these lives devoted to religion, 2,985 males and 444 females are Fakirs, Bhikshuks. As to those who minister to the body, the number of qualified medical men is 107, but, the number of unqualified leeches—429. Editors 16 are enumerated, 15 males and 1 lady. The number of persons engaged in education, has increased from 1,231 in 1872 to 1,604 in 1881; of the 1,604 enumerated as engaged in education, 1,415 are males and 189 females. In the class artists, 98 painters and 42 photographers are found.

384 midwives and nurses are enumerated. Musicians are not unnumerous, 686 males and 7 females. Dancing girls and hereditary dancing girls—naikins are, 685, and dancing males 19; the number of naikins generally, including Bhavin, &c., is 526. 52 men are snake-charmers.

It is seen from the statistics of the Professional classes, that the largest number of the, 2,929, women in the Professional class, occupied in Definite Occupations, are engaged in dancing—685, that the second largest number are engaged in religion—444, and that the third largest number are midwives and nurses—384.

In Class II. we observe, that a large number of the male population are domestic servants; 27,071 males are indoor servants, and 11,460 are general servants; 5,732 females are engaged in domestic service; it is curious, to find, that 228 women keep cook-houses, but of the 228 we observe, that 30 are Musulman, and 192 are Hindoos; 95 women are water-carriers by occupation; there are 3,684 washermen and 1,629 washerwomen.

Class III., Commercial.—There is considerable difficulty in classifying commercial occupations. The line of demarcation between different commercial callings is not easily perceived nor easily followed; 4,237 men and 14 women are merchants, and 3,031 men and 150 women are shopkeepers and retail dealers; the distinction, here, between merchants and shopkeepers is perhaps not much; 154 men are bankers; 1,000 men and 124 women are reported to be itinerant dealers and shopkeepers; 1,422 men and 14 women are pedlars; 958 men and 17 women are reported to be money-lenders; 8,221 commercial clerks are enumerated. Drivers of public carriages are 1,312; and we find, that there are 4,742 bullock cart owners and drivers,—men, and, 12, women. In a seaborn-trade created city we must find a large sea-going population; and we find 23,811 seafaring men enumerated, 3,507 of whom are boatmen; the largest body of Class III., Commercial, are seamen.

Class IV. includes the Agricultural class, and the classes engaged either in the service or in the capture of animals; the class is not a very numerous one,—9,042 males and 1,108 females; the largest family are the fishermen 2,562—, 2,552 fishermen, and there are also 10 fisherwomen. 30 men and 36 women are leech-dealers; there are 1,917 male and 119 female gardeners.

Class V. is the Industrial, and this large class has been divided into 6 orders; it consists of 102,553 men and 28,702 women; connected with printing and publishing, we find 128 book-sellers and publishers—male but no female, engaged in publishing or selling books; 50 men entered themselves as newspaper proprietors or literary men; from paper, to ink to cover the paper, and we find 34 ink manufacturers. Connected with the amusement of the young and even adults, we find 44 men and 4 women engaged in toy and kite making and selling. We find 2,043 men as engine constructors, fitters, &c., and 859 men engaged in railway carriage construction, and 105 carriage, cart, and palki makers. The number of boat and ship-builders is very small, only 46; and there are 111 sailmakers. The numbers finding employment through house-building must necessarily be considerable; we find, 8,145 carpenters, joiners and sawyers, and 2,287 masons and bricklayers; house and wall painters number 693. There are 197 furniture makers and dealers. 18 men returned themselves as undertakers and carriers of the dead.

Very great trouble was taken to procure a correct enumeration of factory hands, for the purpose of indicating the general sanitary nature and peril to health of the factory occupations. Factory artisans, in wool, cotton, and silk, were divided into workers in factories in which steam is used, and workers in factories by hand;—the former are the workers in the large buildings, and the latter are the workers in the small buildings, in the midst of dwellings. Having, experienced the necessity of a correct return of the factory workers, I had

thought much of the classification, best adapted to ascertain the number of factory workers, and to record the broad distinctions in their work; any classification, to be of practical use, must be simple and clear, and, intelligible to those classifying, or, to those to be classified; and, the classification adopted, was simple, and adopted for its simplicity and the important information it would convey,—yet, 4,322 men and 1,686 women, employed in factory works, were not included in it, and they were returned as spinners and weavers and factory workers unspecified; this was disappointing, considering the very great trouble taken to enumerate the factory workers. The enumeration of factory hands demonstrates the great increase that has taken place in the operative population.

	Males.	Females.
Blanket and woollen makers and cleaners by steam	43	218
Do. do. do. by hand	156	6,107
Silk workers by steam	222	80
Do. by hand	513	174
Cotton spinners, cleaners, and weavers by steam	19,203	6,038
Do. do. by hand	4,405	2,248
Spinners and weavers and factory workers (unspecified)	4,322	1,686

Under the vague head, of general labour, most adults and children are returned as employed; in the manufacture of cotton by steam, 25 per cent. of the male workers are boys, and, nearly an equal proportion of the females are girls—under 15; 20 per cent. of the total boy toilers, and an equal proportion of girls, are engaged in mill production.

In the unwholesome occupation of wool-cleaning, 14 per cent., out of total women engaged in that occupation, are young girls—toiling in murky—filthy atmosphere—darkened must be their life prospects.

About 31,812 persons, 8·4 per cent. of the total toilers, definitely returned themselves as employed in the mill industry; 18,098 men, 6,169 women, 1,853 girls and 5,692 boys under 15; but, a number returned as engaged in general labour are undoubtedly employed in mill work.

This table illustrates the occupations in which adult and child labour is most largely engaged.

(General Distribution of Child and Adult Labour in Bombay City.)

Males. Occupations.	Percentage of Boys to total Boys under 15 occupied.	Percentage of Males to total Males over 15 occupied.	Ratio of Boys, under 15, to total number of Males engaged in each occupation.	Females. Occupations.	Percentage of Girls to total Girls under 15 occupied.	Percentage of Females to total Females over 15 occupied.	Ratio of Girls, under 15, to total number of Females engaged in each occupation.

Total...	100·00	74·78	25·22

It is a significant fact, that one-fourth of the engaged in Mill production are not full-grown.

Of silk-dyers, 892 are males and 144 females; and 1,237 men and 108 women are employed in cotton-dyeing; 32 men and 2 women are engaged in lace-making; 620 men and 26 women are embroiders. In jute working and selling 711 men are engaged; 127 men and 70 women are engaged in rope making and selling, and 18 men in tentmaking. The ornaments of religion or caste have to be made, and we find 17 men and 17 women engaged in making caste marks. The barbers are a numerous class, 3,703 men and no women; the tailors are 6,536 men and 709 women; shoe-making gives employment to 3,096 men and 393 women.

We now come to the important order engaged in the production and sale of food and drink; milkmen and milksellers number 2,064 men and 570 women; and, did not the opulent classes generally and wisely keep cows, milkmen and milkwomen would be more numerous; butchers and meat sellers are 1,065 men and 161 women, of the men, 958, and of the women, 160, are Musulman; fowl sellers—178 men and 33 women.

The great majority, engaged in the sale of fish, are women, and labour hard and truly these women; 2,095 women and 559 men are engaged in selling fish. Grain and flour dealers number 2,580 men and 55 women.

In cleaning and grinding grain, a large number of women are employed, 2,428 women and 122 men find employment through grain cleaning and grinding; 552 men and 22 women returned themselves as bakers; sweetmeat makers and sellers are a not unimportant class, 1,406 men and 175 women sell or make sweetmeats. 2,023 men and 1,663 women engaged in selling vegetables and fruits.

Dealing in spirits and wines, 822 men and 19 women are engaged; 1,704 men and 12 women are employed as distillers and toddy-drawers. Increasing wants of increasing luxury

are indicated in the thirst for artificial drinks, and we find 208 men employed in making and selling soda water. In the preparation and sale of tobacco and snuff, 687 men and 1,085 women are employed.

27 men are engaged in preparing and selling chundol; and 49 men and 1 woman are employed in preparing and selling ganja or bhang. Pan-supari dealers must be numerous, for the consumption is great, and we observe, that 665 men and 123 women are engaged in preparing or selling pan and nut; 85 men and 4 women were making and selling harmless sherbet.

Dealing in hides and leather 587 men and 14 women are engaged.

With increasing wealth, and activity in building, we find an increasing number of wood and timber merchants and wood sellers; 355 men and 3 women are engaged in the wood and timber trade, and 578 men and 47 women sell firewood; 505 men and 276 women are engaged in basket or cane work or in selling cane-made articles, and 214 men and 201 women in broom-making. 197 men and 50 women are engaged in dealing in forage and grass, and 35 men and 5 women sell grass for thatch.

The number employed in the production of paper is very small, only 18 men; the number engaged in collecting rags is larger, 118 men and 48 women.

A peculiarly Indian calling is the making of cowdung cakes and a most useful source of fuel cowdung is, 36 men and 158 women are engaged in it, and the number is much larger than in 1872.

In quarrying 409 men and 31 women are engaged, and 682 men and 82 women are enumerated to be stone-cutters; the number of potters is 775,—515 men and 260 women,—and 71 men are brickmakers; 212 men and 69 women are employed in making or selling glass bangles, and 44 men and 4 women in making or selling glass beads.

In collecting and preparing salt 111 men and 110 women are engaged, and in selling salt 122 men and 8 women are engaged. We find, now, 103 men engaged in making or selling ice.

The workers and dealers in precious metals and stones are numerous. We find 3,445 men and 2 women gold and silver smiths; and 154 men, dealers in precious stones, and 14 men lapidaries; 190 men are reported to be assayers and dealers in gold and silver, and 11 men and 5 women are employed in gold-washing; there are 1,279 men working in copper; 703 men and 12 women are engaged in either working or selling tin; and there are 170 men and no women employed in dealing in or in making brass. There are 264 hardware or iron mongers, and 1,849 blacksmiths.

Class VI. embraces occupations which could not be classified in any precise class, and hence called Indefinite; it is chiefly made of general labourers or coolies, 58,972 males and 14,526 females, and there are 1,944 male factory labourers and 94 women; in this class there are 1,410 men and 46 women employed in shops, exact nature of employment being unspecified. In this Census mendicants are returned, and placed in this class; there are 6,618 male, and 2,966 female mendicants.

The number of prostitutes simply represents the women living publicly by prostitution, there were 1,524; and 34 panders.

Examining the distribution of classes of occupations, we observe, that the population following Industrial pursuits, are most numerous in Parell and Byculla; and Indefinite occupations, in Dongree, Sewree, Koombarwara, 1st Nagpada and Camateepura; the great miscellaneous class are collected in greatest number in the Fort north and in Chukla.

Mendicants—a wide definition—included in the class Indefinite—are most numerous in Bhooleshwur—3·19 per cent., Camateepura—2·41 per cent.; 2nd Nagpada—2·26 per cent., Kharatalao—2·08 per cent., Koombarwara—1·97 per cent., and Oomburkharee—1·57 per cent., of the total population of each section.

The point of most interest in connection with the distribution of workers by sex or class is the large proportion of Musulman women following some occupation—10,046 out of 60,757 total female toilers.

This table, which gives a comparative view of the occupations followed by the populations of Bombay and Calcutta, will be found interesting.

Occupations.	Males.		Females.	
	Bombay.	Calcutta.	Bombay.	Calcutta.
Class I.—Professional	5·27	8·56	0·95	0·27
„ II.—Domestic.....	10·49	9·56	2·59	8·86
„ III.—Commercial	13·14	16·08	0·11	1·12
„ IV.—Agricultural and Pastoral.	1·95	3·82	0·36	0·38
„ V.—Industrial.....	22·06	19·08	9·31	5·58
„ VI.—Indefinite	15·47	47·90	6·38	83·79
„ VII.—Miscellaneous	31·62		80·30	

In regard to the distribution of classes in occupations, full and exact information can be obtained from the tables; a few words will now suffice; Europeans, and Brahmans have the largest ratio of males in the Professional class, and Europeans, Eurasians, and Hindu low-castes the highest proportion of females; in Domestic occupations, Native Christians and Goanese have the highest proportion of males and females. The largest percentage of males, in any one class, engaged in trade is found amongst Negro-Africans, 67·8 per cent. of whom are in Class III.; 39·1 per cent. of the European male population and 24·6 of the Jain are enumerated in the Commercial class; and the Jains have the highest ratio of females; and Mussulman the next highest proportion of females in this class; in Agricultural pursuits, Lingaets, and Native Christians and Goanese have the highest proportion of males and females; in Industrial occupations, Buddhists, Muslimin, Jews, and the general body of the Hindu population have the highest ratio, of males, and Hindus of other castes (than Brahman, Lingaet, Bhatia), Lingaet, and Buddhist, of females; in the Indefinite class of occupations, Lingaets, and Hindus of other castes (than Brahman, Lingaet and Bhatia), and Hindu-low castes, have the highest proportion of males, and Hindu low-castes, Lingaets, and Hindus other than Brahman, Bhatia, and Lingaet, the highest proportion of females; in Miscellaneous occupations, Eurasians, Parsees and Jews have most males, and Parsees, Bhatias, and Jains most females.

Infirmities.

Infirmities. The Infirmities of the population have been arranged in 4 classes, Insane, Deaf and Dumb, Blind, and Leper. In each class, there are more males than females.

Insane. 664 insane were enumerated, 499 of whom were males and 165 females. 322 of the insane were in the Lunatic Asylum, Colaba,—266 males and 56 females. The insane were most numerous between 20 and 30 and between 40 and 50 years of age.

The greatest number of insane were found amongst Hindoos of other castes (than Brahmin, Lingaet, and Bhatia); 63·25 per cent. of the insane were of the general Hindu population; the Musulman population had the next highest number of insane; 12·50 per cent. of the insane were Muslimin. 17 Brahmins, 11 Bhatias, and 1 Lingaet were insane.

Deaf and Dumb. The deaf and dumb in 1881 are most numerous between 20 and 40 years of age, and, more than twice as numerous as the dumb in 1872, this may be due to more minute enumeration; 364 men and 187 women, deaf and dumb, were found. Deaf and dumb were most numerous amongst Parsees and Brahmans; Parsees 1 in 900, and Brahmans 1 in 1,107; and amongst Musulman, 1 in 1,295; fewest deaf and dumb among Hindu-low or out-castes, 1 in 1,584. In 1881, the deaf and dumb in the Zoroastrian population were as many as 54, to 25 dumb in 1872.

Blind. Compared with the Census of 1872, there has been a great increase in the number of the blind, since 1872; only the totally blind were enumerated, and there are 1,767 to 881 in 1872. The blind are necessarily most numerous at advanced age-periods; the prevalence of total blindness, as ascertained by this Census, in each community, is shown in this table:—

Jain	blind	1 in 593
Brahmin	„	1 in 454
Lingaet	„	1 in 1,167
Bhatia	„	1 in 192
Hindu of other Castes	„	1 in 500
Hindu Low-Castes	„	1 in 277
Musulman	„	1 in 360
Negro-African	„	1 in 689
Parsee	„	1 in 422
Jew	„	1 in 237
Native Christian and Goanese	„	1 in 697
Eurasian	„	None.
European	„	1 in 1,742
Buddhist	„	None.

Lepers. Lepers—430 were enumerated in 1881, against 209 by the Census of 1872; 266 males and 164 females were suffering from leprosy, or, in the proportion of 162·19 males to 100 females; there is, therefore, an excess of males amongst the lepers enumerated. The greatest number of, both male and female, lepers between 20 and 30 years of age; under 5 years of age, 3 male and 3 female children, were reported to be suffering from leprosy. There were no lepers enumerated amongst Negro-Africans, Eurasians or Buddhists.

Jain	1 leper in	8,609
Brahmin	Do.	11,809
Lingaet	Do.	1,167

Jew	Do.	3 321
Native Christian and Goanese	Do.	2,362
European	Do.	10,451

Leprosy is, now, either more general amongst the population, or, lepers come here, or, possibly, the disease has been more carefully enumerated in 1881. We find, now, amongst Lingaets and Bhatias 5 lepers, in 1872 there were none. Amongst Muslimin, lepers are three

times as numerous as in 1872, 60 in 1881, against 20 in 1872. Amongst Parsees, 25 in 1881, to 9 in 1872. And in the Native Christian and Goanese population, 13 lepers in 1881, to 5 in 1872.

	Census 1881.					Census 1872.

Females	165	187	840	164	1,356	81	2	83	348	206	76	...	796
Total ...	664	551	1,767	430	3,412	325	9	230	881	629	209	23	2,306

Houseless.

The houseless, are now distinguished for the first time, and the information is new and interesting; 1,442 men and 634 women, were homeless and wanderers; 673 men and 424 women, of the houseless, belonged to the general Hindu population, and 577 men and 136 women were Muslimin; even, the European race contributed 1 wanderer.

Harbour.

3·22 per cent. of the population live in the harbour; the Harbour population, in 1881, amounted to 24,887, consisting of 24,340 men and 547 women; the increase in the number of women is remarkable; in 1872 only 93 women, and in 1864 but 55 women were found in the harbour. Of the women enumerated in the harbour in 1881, as many as, 468 were Muslimin, 51 Hindus, 18 Europeans, and 5 Jews; the male population, consisted of 2,036 Europeans, 8 Buddhists, 546 Native Christians and Goanese, 1 Jew, 8 Parsees, 144 Negro-Africans, 10,444 Muslimin, 11,111 Hindus, and 42 Hindu low- or out-castes.

Examining the floating accommodation, of various and numerous kinds, we find, on board Ships of the Royal Navy 474 men, 455 of whom were Europeans; on board Merchant Ships 1,061 men and 1 woman, divided into the following races:—Europeans 57 men and 1 woman, Mussulman 510 men, and Hindus and Hindu low-castes 494 men; on board Merchant Steamers 3,197 men and 471 women, of the following races, Europeans 1,403 men and 16 women, Native Christians and Goanese 247 men, Jews 1 man and 5 women, Parsees 8 men and 2 women, Muslimin 1,231 men and 443 women, Negro-Africans 10 men, Brahmins 4 men, Hindus and Hindu low-castes 285 men and 5 women. On Native craft the races are less diverse; on Tonies, Dinghies and Canoes 1,813 men and 2 women were found, and of the 1,813 men—1,496 are Muslimin; taking all Native craft, enumerated as Native Craft—Khotias, Patimars, Bugloes and Muchvas, &c, &c.—we find the races living or employed on them in the following proportions, calculated on population of Native vessels:—Brahmins, ·03 per cent., Hindus (other than Brahmin, Lingaet and Bhatia), 53·32, Hindu low- or out-Castes, ·20, Muslimin, 44·27, Negro-Africans, ·70, and Native Christians and Goanese, 1·48 per cent.

I have, now, arrived at the end of the report on the Census of 1881. I have tried to arrange the Report on the lines of the valuable Report on the Census of 1872; it has not always been possible to do so, or, to follow the same system; nevertheless, the statistics of 1881 have been so treated, that it will be possible to compare much of the information in this volume with the information obtained by the enumeration of 1872.

T. S. WEIR,
Health Officer.

Appendix A.

HOUSEHOLDER'S RETURN FOR CENSUS OF 1881.

(1.) SECTION_____

(2.) Register Number_____ (3.) Street or Wádi_____

(4.) Block Number_____

(5.) House Number_____

(6.) Signature of Enumerator _____

NOTE.

(1.) The Municipal Commissioner requests that every one at whose house or place of residence this paper is left will return it to the Enumerator or other Officer who may call for it, as correctly and accurately filled in as possible, as shown in the subjoined example; or, if the Householder be unable to write, that the information necessary to fill in the form may be furnished verbally to the Enumerator, who will call for it after 8 P.M. on the night of 17th February, or on the following morning. Householders will greatly assist in the collection if before leaving home on that day they will deliver this to their servants with express orders to promptly hand the same to the Enumerator.

(2.) Any Householder unable to fill up his own Schedule may authorize any other person to fill it up for him. Educated native gentlemen can, and no doubt will, render very great assistance by filling up the Schedules for their tenants or neighbours who cannot write.

(3.) It is the duty of the Enumerator to complete the Return if it be defective, and to correct it if erroneous.

(4.) The object of the Census being to show the exact numbers, ages, and condition, of the people, their arrangement in different occupations, as compared with the similar statistics collected in other parts of the British Empire, and also their increase and progress during the last nine years, the facts ascertained from the Returns will be published only in General Abstracts, and strict care will be taken that this Return is not used to gratify curiosity.

PENALTIES.

Extract of Bombay Act III. of 1872, *as amended and continued by Bombay Act IV. of* 1878.

Sec. 263.—Any person wilfully neglecting or refusing correctly to fill up and affix his signature to any such Schedule or Return so left at his house or place of residence, or who shall neglect or refuse to return the same to the Enumerator or other Officer when called upon so to do, or to furnish the necessary information to an Enumerator to fill up the same for him if he do not know how to write, shall be liable to a penalty not exceeding Rs. 200, and may also be detained in custody until he shall have correctly filled up and signed the same Schedule or Return.

Sec. 264.—Any Enumerator or other subordinate Officer employed in the collection of such Schedules or Returns, if he shall find any of the same defective, or in any respect improperly filled in, shall return the same to the occupant of the house or residence to which they relate; together with a written or printed notice requiring that the same be duly filled in or amended within a specified period not less than twenty-four nor more than forty-eight hours, and if such occupant shall then fail so to fill in or to amend any such Schedule or Return, he shall, upon conviction, be liable to a fine not exceeding Rs. 200, and may also be detained in custody till he shall correctly fill in or amend the said Schedule or Return.

INSTRUCTIONS FOR FILLING UP THE SCHEDULE.

Col. 1.—The enumeration is to include all persons who abode in the house or on its premises on the night of the Census, except servants and employés who, residing with their families elsewhere, were merely present on night duty. Care must be taken to enumerate all the relatives, connections, and visitors, male and female, of the resident servants who were abiding on the premises. Any ordinary or habitual resident absent for the night only on duty, taking his meals from the house, and intending to return the day after the Census, should be enumerated as present. Enter first the head of the household, whether male or female, then the rest of the members of the family, then servants, and lastly visitors, a cross line being drawn between the names of the latter and those of the habitual residents.

Col. 2.—In the case of natives of India the father's name should be added, and where there is any objection made to giving the names of females the serial number and the word "Female" in this column will suffice, the remaining columns being filled in as usual.

Col. 4.—If the person enumerated cannot state his age, inquiry should be made of the relatives present, or the person filling up the Form should guess the age as accurately as possible.

Col. 5.—Natives of India should be entered as married though (1) they may be children who, having gone through the ceremony of marriage, may not have yet begun to live with their wives or husbands; (2) they may be married not by the ceremony of "*Lagan*" or "*Shadi*," but by that of "*Mohótur*," "*Natra*" "*Nikah*," or other form of remarriage. Only persons who have never been married at all should be entered as unmarried; persons who, having lost their first husband or wife, have married again should not be entered as widow or widower, whatever the ceremonial of their second marriage may have been, provided that some recognized form was gone through on the latter occasion.

Col. 6.—The main religious denominations should be entered, such as Hindu, Christian, Mahomedan, Parsi, Jew, Sikh, Jain, Brahmo or Prarthna Somaj, and Bauddha or Buddhist.

Col. 7.—Christians, whether native or foreign, should give their sect. No general terms, such as Protestant, should be used. In the case of natives of India no indefinite terms, such as Pardeshi, Madrasi, Kshatriya, Brahman, Gujar, should be entered alone, as the divisions of these classes can easily be ascertained if the persons concerned be asked to state them.

Col. 8.—Enter the language habitually spoken in the parents' household.

Col. 9.—If a European British Subject, add "British Subject." If of Foreign Nationality, state of what Country. If of mixed European and Asiatic origin, add, "Indo-European." If born in India, state District and Province.

Col. 10.—In general, as stated in the Schedule-heading, only the occupations of those who actually do regular work are to be entered in this column; so boys at school, girls and women who do no such work must be omitted; but where women habitually help their husbands or other relatives in the special duties of their occupations, or are regularly engaged in some other occupation, in addition to doing the ordinary household work, their occupations should be entered. Where a person has more occupations than one, he should be entered as following that only from which he derives the greater part of his income. But if he hold or rent land, in addition to his principal means of livelihood, he should enter both occupations, describing his connection with land, as proprietor, Inámdár, lessee, occupant, agricultural labourer by the day or year, &c., and should also state whether he himself cultivates, or whether his land is let out to others for cultivation. General terms, such as merchant, mechanic, workman, or labourer, should not be entered, but the specific branch of occupation or service should be given. Persons in *Government service* should state the capacity in which they are engaged. *Pensioners* should state whether they are Civil, Military, or Naval. Persons connected with *religion* as a profession should state their office. Members of the *legal* profession should state whether they are Barristers, Solicitors, Pleaders, Law Agents, Officers of a Court, Apprentices, Articled Clerks, &c., &c. *Medical* practitioners should enter the branch to which they belong, and whether they actually practise or not. Other members of the professions should state their office clearly. Persons exercising *educations* as profession should state what branch they follow. Similarly *artists* and persons connected with *literature*. Persons engaged in *commerce*, as Merchants, Brokers, Agents, &c., should enter the branch of commerce in which they are engaged, or the staple in which they deal. Commercial *clerks*, *travellers*, and *shopmen* should also record their branch of business. In *trades* and *manufactures* the *employés* must enter themselves as such, and *workers* in manufactures, or artisans, should specify the particular branch of work in which they are employed. Similarly *mechanics* and *weavers*. The term *Engineer* by itself should not be used; a *Civil Engineer* should enter himself as such; workmen in *engineering factories* should distinctly specify what their branch of work is, as Engine-smith, Engine-fitter. If employed on railways, in factories or steam vessels, the workmen should be entered as such. *Messengers*, *porters*, and *labourers* should be described, as far as possible, according to the nature of their employment. Persons *not engaged in any occupation*, but deriving their income from rents, dividends, and the like, should describe themselves according to the source of their livelihood. Persons temporarily unemployed should enter their last or ordinary occupation. In the case of native occupations the common vernacular terms by which they are known should be given.

Col. 11.—Children under instruction, whether at school or at home, should be entered as "Pupils." Persons not learning but able to *both* read and write should be entered as "Educated," and persons not under instruction and not able to read and write, or able to sign their names but not to read, should be entered as "Illiterate."

Col. 12.—No distinction need be drawn in this column between insane persons and idiots. Only those persons should be entered as *deaf-mutes* who have been thus afflicted from birth. *Blindness* implies total inability to see. *Leprosy* should be distinguished as corrosive (*Raktpit*) and discoloration (*Kord*), of which the former only need be entered.

N. B.—(1). After filling in the Schedule, the householder should certify, under his signature below it, that the contents are true to the best of his knowledge and belief.

(2). In the above instructions the masculine gender is held to include females.

Appendix B.

HOUSEHOLDER'S RETURN FOR CENSUS OF 1881.

(1.) SECTION_____

(2.) Register Number_____ (3.) Street or Vádi_____

(4.) Block Number_____

(5.) House Number_____

(6.) Signature of Enumerator_____

NOTE.

(1.) The Municipal Commissioner requests that every one at whose house or place of residence this paper is left will return it to the Enumerator or other Officer who may call for it, as correctly and accurately filled in as possible, as shown in the subjoined example; or, if the Householder be unable to write, that the information necessary to fill in the form may be furnished verbally to the Enumerator, who will call for it after 8 P.M. on the night of Census, or on the following morning. Householders will greatly assist in the collection if before leaving home on that day they will deliver this to their servants with express orders to promptly hand the same to the Enumerators.

(2.) Any Householder unable to fill up his own Schedule may authorize any other person to fill it up for him. Educated native gentlemen can, and no doubt will, render very great assistance by filling up the Schedules for their tenants or neighbours who cannot write.

(3.) It is the duty of the Enumerator to complete the Return if it be defective, and to correct it if erroneous.

(4.) The object of the Census being to show the exact numbers, ages, and condition, of the people, their arrangement in different occupations, and their increase and progress during the last nine years, the facts ascertained from the Returns will be published only in General Abstracts, and strict care will be taken that the Return is not used to gratify curiosity.

PENALTIES.

Extract of Bombay Act III. of 1872, *as amended and continued by Bombay Act IV. of* 1878.

Sec. 263.—Any person wilfully neglecting or refusing correctly to fill up and affix his signature to any such Schedule or Return so left at his house or place of residence, or who shall neglect or refuse to return the same to the Enumerator or other Officer when called upon so to do, or to furnish the necessary information to an Enumerator to fill up the same for him if he do not know how to write, shall be liable to a penalty not exceeding Rs. 200, and may also be detained in custody until he shall have correctly filled up and signed the same Schedule or Return.

Sec. 264.—Any Enumerator or other subordinate Officer employed in the collection of such Schedules or Returns, if he shall find any of the same defective, or in any respect improperly filled in, shall return the same to the occupant of the house or residence to which they relate; together with a written or printed notice requiring that the same be duly filled in or amended within a specified period not less than twenty-four nor more than forty-eight hours, and if such occupant shall then fail so to fill in or to amend any such Schedule or Return, he shall, upon conviction, be liable to a fine not exceeding Rs. 200, and may also be detained in custody till he shall correctly fill in or amend the said Schedule or Return.

SPECIAL INSTRUCTIONS FOR FILLING UP THE SCHEDULE.

Col. 1.—The enumeration is to include all persons who abode in the house or on its premises on the night of the Census, except servants and employés who, residing with their families elsewhere, were merely present on night duty. Care must be taken to enumerate all the relatives, connections and visitors, male and female, of the resident servants who were abiding on the premises. Any ordinary or habitual resident absent for the night only on duty, taking his meals from the house, and intending to return the day after the Census, should be enumerated as present.

Col. 2.—In the case of natives of India the father's name should be added and where there is any objection made to giving the names of females the serial number and the word "Female" in this column will suffice, the remaining columns being fil'ed in as usual.

Col. 4.—Natives of India should be entered as married though (1) they may be children who, having gone through the ceremony of marriage, may not have yet begun to live with their wives or husbands; (2) they may be married not by the ceremony of "*Lagan*" or "*Shádi*," but by that of "*Mohotur*," "*Nátru*," "*Nikah*," or other form of remarriage. Only persons who have never been married at all should be entered as unmarried; persons who, having lost their first husband or wife, have married again should not be entered as widow or widower, whatever the ceremonial of their second marriage may have been, provided that some recognized form was gone through on the latter occasion.

Col. 5.—If the person enumerated cannot state his or her age, inquiry should be made of the relatives present, or the person filling up the Form should guess the age as accurately as possible.

Col. 6.—The main religious denominations should be entered, such as Hindu, Christian, Mahomedan, Parsi, Jew, Sikh, Jain, Bráhmo or Prárthna Somáj, and Bauddha or Buddhist.

Col. 7.—Christians, whether native or foreign, should give their sect. In the case of natives of India no indefinite terms, such as Pardeshi, Madrási, Bráhman, Gujar, should be entered alone, as the divisions of these classes can easily be ascertained if the persons concerned be asked to state them.

Col. 10.—In general, as stated in the Schedule-heading, only the occupations of those who actually do regular work are to be entered in this column; but where women habitually help their husbands or other relatives in the special duties of their occupations, or regularly bring the produce of their labour to market, in addition to doing the ordinary household work, they should be considered as regularly employed. Where a person has more occupations than one, he should be entered as following that only from which he derives the greater part of his income. General terms, such as merchant, mechanic, workman, or labourer, should not be entered, but the specific branch of occupation or service should be given. Persons in *Government service* should state the capacity in which they are engaged. *Pensioners* should state whether they are Civil, Military, or Naval. Persons connected with *religion* as a profession should state their office. Members of the *legal* profession should state whether they are Barristers, Solicitors, Pleaders, Law Agents, Officers of a Court, Apprentices, Articled Clerks, &c., &c. *Medical* practitioners should enter the branch to which they belong, and whether they actually practise or not. Other members of the profession should state their office clearly. Persons exercising *education* as a profession should state what branch they follow. Similarly *artists* and persons connected with *literature*. Persons engaged in *commerce*, as Merchants, Brokers, Agents, &c., should enter the branch of commerce in which they are engaged, or the staple in which they deal. Commercial *clerks*, *travellers*, and *shopmen* should also record their branch of business. In *trades* and *manufactures* the *employers* must enter themselves as such, and *workers* in manufactures, or artisans, should specify the particular branch of work in which they are employed. Similarly *mechanics* and *weavers*. The term *Engineer* by itself shou'd not be used; a *Civil Engineer* should enter himself as such; workmen in *engineering factories* should distinctly specify what their branch of work is, as Engine-smith, Engine-fitter. If employed on railways, in factories or steam vessels, the workmen should be entered as such. *Messengers*, *porters*, and *labourers* should be described, as far as possible, according to the nature of their employment. Persons *not engaged in any occupation*, but deriving their income from rents, dividends, and the like, shou'd describe themselves according to the source of their livelihood Persons temporarily unemployed should enter their last or ordinary occupation. In the case of native occupations the common vernacular terms by which they are known should be given.

Col. 12.—No distinction need be drawn in this column between insane persons and idiots. Only those persons should be entered as *deaf-mutes* who have been thus afflicted from birth. *Blindness* implies total inability to see. *Leprosy* should be distinguished as corrosive (*Raktpit*) and discolouration (*Kord*), of which the former only need be entered.

N.B.—After filling in the Schedule, the householder should certify, under his signature below it, that the contents are true to the best of his knowledge and belief.

Appendix D.

CENSUS OF 1881.

RETURN FOR VESSELS.*

Port where Schedule issued.

Port where Schedule delivered.

No. of Form.

Date of issue

Name of Vessel

Date of delivery.

Signature of Enumerator who issued it.

No. of Pass.

Name of Master.

Signature of Officer receiving it.

[* Issued by order of the Magistrate of the District under Sec. 5, Act XIV. of 1880.]

INSTRUCTIONS.

1. This schedule will be delivered to the Master of the vessel between 3rd and 16th February, and is to be filled up in accordance with the accompanying instructions on the evening of 17th February. If the vessel be in harbour during that night, the schedule will be called for then or on the following morning. If the vessel be at sea on that night, the schedule should be delivered to the Census Officer of the first port touched at after 6 A.M. on the morning of 18th. The person to whom the schedule is delivered will give the Master of the vessel a pass, which should be carefully kept on board until March 18th, to be shown, as a certificate of enumeration, at any Indian port where the vessel touches before that date.

2. The Master is requested not to allow any of his crew to go on shore between 8 P.M. and 6 A.M. on the night of 17th February, or, if they are obliged to go on business he should give them a certificate of enumeration, after duly including them in the schedule of the vessel before they leave.

3. In the case of coasting steamers, the Master and crew, with the establishment of servants, if any, should be entered in a Schedule apart from those reserved for passengers. Of the latter, persons disembarking between 8 P.M. and 6 A.M. should be enumerated by the Company's Agents or others at the place where they land. At the first port in British India or a Native State touched at after 6 A.M. on the morning of 18th, all passengers still on board should be enumerated, and the schedules relating to them, as well as those of the vessel, should be made over to the Census Officer of the port. Any passengers entering the vessel between 8 P.M. and 6 A.M. on the night of 17th should be asked if they have been already enumerated on shore, and if they say they have, they should not be included in the schedules filled up on board.

THE ENTRIES TO BE MADE IN THE SCHEDULE.

Every person, male, female, infant or adult, who was on board the vessel on the night of 17th February must be entered. People ordinarily on board the vessel but absent for an hour or so should be considered as present, but people not ordinarily residing on board who happen to be present for a few hours on a visit, returning immediately to their own homes, are not to be entered.

The first name to be entered should be that of the Master of the vessel (Captain, Tindal, &c.), after which the standing crew and resident employés and servants should be entered. Then a cross line should be drawn in Col. 2, and below it the passengers and others not habitually resident on board should be entered.

Col. 2. (*Name.*) There is no need to insist upon the name of any female being given; the word "female" entered in this column will suffice.

Col. 3. (*Marriage, &c.*) Enter as unmarried only those who have never been married. Young children, natives of India who have been married should be entered as such though they have not yet begun actually to live with their wives and husbands. Persons who have married a second time on the death of their first wife or husband should be entered as married, not as widower or widow.

Col. 4. (*Age.*) Enter the age in completed years. In the case of children under a year old enter the age in months, *and if under a month, in days.** If persons can't state their ages exactly, inquiry may be made of the relatives, or the enumerator should guess the age as accurately as possible from the appearance of the person. The column must not in any case be left blank.

Col. 5. (*Religion.*) The main religious denominations should be entered, as Christian, Hindu, Mussulmán, Jain, Párși, &c.

Col. 6. (*Caste or Sect.*) Christians, whether native or foreign, should enter their sects, as Episcopalian, Roman Catholic, &c. No general term, like Protestant, should be used. Hindus should be asked their caste in detail, without entering general names like Bráhman, Kshatriya, Pardeshi, &c. So, too, with Mussulmáns, who should state whether they are Shiah, Sunni, &c., and then whether they are Shekh, Jamáti, Arab, Borah, Dáldi, &c.

Col. 7. (*Mother-Tongue.*) The language ordinarily spoken by the person's parents in their household should be entered.

Col. 8. (*Birth-place.*) If a European British subject, add "British subject." If of foreign nationality, state of what country. If of mixed European and Asiatic origin, add "Indo-European." If born in India state District and Province.

Col. 9. (*Occupation.*) Special care is requested in filling up this column. All persons, male or female, child and adult, exercising any special occupation should be entered, their occupation being shown in detail, avoiding general terms such as "merchant," "mechanic," &c. When a person has more than one occupation, that only should be entered by which he chiefly makes his livelihood, except in the case of persons who hold or rent land as a subsidiary source of income, when both occupations should be entered. Persons employed on board ship should be entered according to their occupation, as sailor, fireman, stoker, engineer, mariner, &c. Merchants and traders should be requested to state the article in which they chiefly deal, as cotton merchant, oil seller, ivory merchant, grain dealer, &c. Persons temporarily out of employ should give their last or ordinary occupation.

Col. 10. (*Instruction.*) Persons under instruction, whether at school or at home, must be entered as "pupils;" persons not knowing how to read and write at all, or knowing only how to sign their names, should be entered as "illiterate;" only persons who can both read *and* write should be entered as "educated."

Col. 11. (*Infirmities.*) Enter only those blind of *both* eyes, persons who have been deaf *and* dumb *from birth*, those who are afflicted with *corrosive* leprosy (Raktpit), not with the white disease (Kord), and those who are either idiots or insane, in this column.

N.B.—After filling in the schedules, the Master of the vessel should sign them.

SPECIMEN ENTRIES.

Appendix E—(*continued*).

CENSUS OF 1881.

ENUMERATION OF THE SEA-GOING CLASSES AND TRAVELLERS BY WATER.

Bombay Harbour and its neighbourhood.

I.—For the Harbour of Bombay the following special arrangements have been made:—

(*a*) Arrangements for the enumeration of Her Majesty's ships, to be made through His Excellency the Naval Commander-in-Chief.

(*b*) For that of Indian Government vessels, through the Superintendent of Marine.

(*c*) Of large square-rigged and steam vessels, and of yachts, dubash and passenger boats, steam-launches, light-ships and light-houses, through the Port Officer, assisted by the Water Police.

(*d*) Of coasting vessels, ferry and other small steamers, cargo-boats and native craft, laying in the basins or at the Bandars of the Port Trust, through the Traffic Manager of that Corporation, and if laying at the Anchorages, through the Customs Department.

(*e*) Of fishing boats, through the Patels of Siwri, Mazagon, Colaba and Sion, or in the manner hereinafter prescribed for fishing-boats generally.

II.—Vessels sailing under foreign colours are not to be enumerated unless they happen to be laying in the Harbour on the night of 17th February. Vessels, whether sailing under British or foreign colours, which leave before 17th February and are bound for a port beyond British India or Burmah, or which arrive after 17th February having last touched at such a port, should not be enumerated. Ports in Native States are included in the term British India as above used, but not those in the territory of France and Portugal.

III.—The Master of the vessel is in all cases responsible for the due enumeration of all on board on the night of the Census. He will be furnished beforehand, by the Census Officer at the port where the vessel is laying, with the necessary forms and instructions, and will be required to fill in the former with all the details asked for regarding himself, his crew and the passengers that are on board on the night of 17th February. The instructions will provide that after entering his own name he should enter those of the crew, and then, drawing a cross line in column 2 of the form, should enter below it those of the passengers. Schedules will be distributed to all vessels in port before the 16th February, and either schedules or passes, as hereinafter provided, will be demanded of every vessel arriving from a British Indian port between 8 P.M. on 17th and the morning of March 16th.

IV.—In the case of vessels laying in port and likely to remain there over the night of 17th, the forms should be distributed at least three days beforehand, with full instructions regarding their completion and return. The Master of the vessel should be requested not to allow any of the crew to go on shore between the hours of 8 P.M. and 6 A.M. on the above-mentioned date, or, if any are obliged to go on duty, to furnish them with a certificate of enumeration, signed by himself, with directions that it is to be shown to any Census Officer or other person who may wish to enumerate them on shore. On the night of 17th or morning of 18th a Census Officer should visit the vessel and collect the returns, examining the entries to see that they are in accordance with the instructions, and mustering the persons on board if he thinks it necessary to do so. Where the Master is illiterate and unable to fill up the schedule, the Census Officer should, on the occasion of this visit, fill it up for him.

V.—If a vessel is leaving the Harbour between the 3rd and the night of the 17th February and is bound for another coast port in India or British Burmah which it is not expected to reach before or during that night, the Census Officer at the port of departure, when distributing the forms, should instruct the Master of the vessel to fill them up during the night of 17th, and deliver them, duly certified, to the Customs or other authority who may ask for them, at the port first touched at after 6 A.M. on the morning of 18th. It is advisable, wherever practicable, to ascertain what port this is likely to be, and to forward to the Deputy Superintendent of Census, Bombay, on March 17th, a statement showing the numbers of schedules distributed and recovered respectively under this rule.

VI.—If the vessel arrive in harbour from another coast port of India or British Burmah between 6 A.M. on the 18th February and the evening of the 16th March, the Census Officer of the port must (unless he knows that the vessel has previously touched at a port after the 17th and that this demand has been made before) require from the Master of the vessel a schedule duly filled in, or an enumeration pass from the port where such schedule was delivered, and if neither of these be forthcoming, the Census Officer, who for this purpose will be the officer with whom the enumeration rests under the provisions of para. I. above, shall at once muster the persons on board, and, with the aid of the Master and others, fill in the necessary forms, a supply of which should be furnished to him beforehand.

VII.—In the case of steamers running at short intervals between Bombay and the smaller coast ports special arrangements are necessary, and it will be advisable that the Master and standing crew, including the servants, should be entered on a separate form from that used for passengers. As regards the latter, passengers disembarking at each landing-place at which the vessel touches between 8 P.M. and 6 A.M. should be enumerated where they land. At the first port in British India or a Native State reached after 6 A.M. on the morning of the 18th, all passengers still on board should be enumerated, and the schedules relating to them, as well as those filled up for the Master of the vessel and the crew, should be made over to the local Census Officer, a pass being taken as prescribed below, but all passengers who have embarked after 8 P.M. on the preceding night should be asked if they have been already enumerated on shore at any house or Dharmshála, and if they say they have, they must not be included in the return for the vessel.

VIII.—Every person who receives a schedule filled in for any vessel should give the Master an enumeration-pass, containing (1) the name of the port where the schedules are recorded, (2) the name of the vessel, (3) the name of the Master, (4) the name of the port from which the vessel started, (5) the signature of the person receiving the schedule. The Census Superintendent of the Port should issue these pass-books to persons authorized by name under his signature to grant them, and every Master of a vessel receiving a pass should be instructed to keep it carefully on board the vessel until 18th March.

IX.—*Enumeration of Fishing-boats, &c.*—With reference to vessels of this class particular care must be taken to enumerate all persons belonging to them at their homes if they happen to be absent for the night only. Crews of fishing-vessels and the like should be enumerated, at the villages for which no special arrangements have been prescribed above, by the patils or enumerators of the place, as directed by the Municipal Commissioner. The schedules relating to all vessels belonging to the place should be filled up between 11th and 17th February, and a certificate of enumeration given to the person in charge of the vessel. Any such vessel entering a port or anchorage after the 17th without this certificate should be at once enumerated by the Customs Preventive or other agency. Before the night of the 17th the foreshore of the place should be divided into blocks, and an enumerator appointed to each block. His duty will be to go round to every boat on that night and record in his form-book all persons found passing the night in the boats and not taking their meals from other places, and to verify and correct, if necessary, the schedules previously filled in. He should then visit for a similar purpose all vessels at anchor, using a boat provided by the Superviser of the Harbour.

Appendix G.

CENSUS OF 1881.

INSTRUCTIONS TO SUPERVISORS AND ENUMERATORS IN THE CITY AND ISLAND OF BOMBAY.

I. CENSUS DIVISIONS.—The Sections into which the City and Island are already divided are held to be *Circles* for Census purposes, and will each be placed under a Supervisor. They will further be subdivided into Beats or *Blocks*, to each of which an Enumerator will be appointed.

II. AGENCY.—The Supervisor of each Section will be a Police Inspector. The Enumerators will be of two classes: *special*, or those entertained solely for Census work from 8th February to 18th February inclusive, and paid at the rate of 1 rupee per day; and, secondly, *official*, or persons already employed in public offices, whose services will only be available between 16th and 18th February, inclusive.

III. SUPERVISORS' DUTIES.—The Police Inspector in charge of a Section will be entrusted, as in 1872, with the conduct and supervision of all Census operations within the limits of that Section, and will be responsible for seeing that the Enumerators under him, of whom a nominal roll will be sent, have intelligently studied their instructions and the rules regarding the filling up of the schedules, that they are thoroughly aquainted with the limits and details of their respective Blocks, and that they receive and return the correct number of household schedules. He will be provided from the Census Office with the number of schedules required for his Section, together with a Register in which he must record the exact number issued to each Enumerator and subsequently returned by the latter after the Census. He will also have to see that as the schedules are being returned, the total number for each Block is tied up into a separate bundle, and when the bundles for all the Blocks in his Section are complete he should forward them under proper custody to the Census Office.

IV. ENUMERATORS' DUTIES.—(a) Special (*i.e.*, paid) Enumerators will be summoned to attend on 1st February at the Office of the Police Inspector in charge of the Section to which they are appointed, and will there receive a copy of these instructions, together with the descriptive Register relating to their respective Blocks, and the number of schedules required for distribution.

(b) The Enumerator will then be conducted by a Police Constable to his Block, and be there shown its details and limits. He will go from house to house obtaining from the occupant or person in charge all the information he requires for filling in his descriptive Register. By house he will understand the dwelling-place of one or more families, with their servants, having a separate principal entrance from the public way: and a separate number. The Enumerator must enter the assessment number of the house in one column, and the Census number in another column of the Descriptive Register.

(c) He will then deliver to the occupant of each house, or separate tenement, a schedule, on which he should write the particulars of section, street, and block, &c., adding the serial number of the schedule according to a list he should keep to guide him when afterwards collecting the forms. He must affix his signature to these entries, and also enter the number of schedules delivered in the column set aside for that purpose in his Register.

(d) At the time of delivering the schedule the Enumerator should give the householder to understand—(1) that the schedule must be accurately filled in by the evening of 17th February, when, or on the morning of 18th February, it will be called for; (2) that attention should be paid to the instructions on the reverse of the schedule about the entries to be made in it; (3) that if the householder be unable to fill in the schedule himself some other person may be called in to write it for him, and that the entries must be signed by or for him when correctly recorded; (4) that if a schedule be accidentally damaged, it should be returned to the person from whom it was received, and exchanged for a fresh one, or if a schedule be lost, or totally destroyed, another can be obtained on the householder's name and address being given to the Enumerator, or left at the nearest Police Station; [*The Enumerator must recollect to enter on every fresh schedule thus issued the number, &c., of that which it replaces.*] (5) that members of the householder's family away from home on duty, &c., on the night of 17th February *but taking their meals from the house* should be counted as present, but no one otherwise absent must be entered in the schedule; (6) that if any householder who has received a schedule leaves Bombay before the night of 17th February, he should not take the schedule away with him, but leave it with one of the members of his family, or if there be none present in Bombay, then with the Enumerator or the nearest Police Officer, who will promptly deliver it to the Enumerator.

(e) The Enumerator must be prepared to answer any questions asked and give any explanations regarding the schedule required from him by householders who have received schedules, and if any points arise about which he is in doubt he must at once report them to the Sectional Police Officer for decision.

(f) A special descriptive Register is prescribed for the use of Enumerators and others who will be employed in the Census of persons on board vessels in the harbour.

(g) In the case of barracks, hospitals, prisons, boarding-schools, hotels, and similar institutions containing a large number of inmates, the Enumerator will deliver a letter from the Municipal Commissioner accompanied by the necessary number of schedules, to the managers, superintendents, or other persons in charge of the buildings, with a request that the returns of the inmates of their respective institutions or buildings may be prepared by the morning of 18th February, and delivered to the Enumerator or other person who may then call for it.

(h) Enumerators must complete the distribution of household schedules by the 13th February, after which date they will again visit every house in their respective Blocks, and fill up the schedules for any one unable either to do this for themselves, or to get it done for them by others. This duty must be accomplished by the 17th February. A public servant will be appointed from 16th February to assist each Enumerator in this task, as well as in collecting the schedules in the manner provided for below:—

(i) On 17th February, the date fixed for the Census, Enumerators will begin to collect the schedules at sunset. On entering each house or tenement provided with a separate schedule, the Enumerator will ask for the chief resident, or, if that person be not present, for his or her representative, and recover the schedule previously issued. He should carefully examine the entries recorded, so as to see that they are in accordance with the instructions, and should also inquire whether any change has taken place in the household, such as a birth, death, or the arrival or departure of a guest or visitor, since the schedule was filled in, making, according to the answer received, all the corrections, additions, or alterations necessary to bring the record up to date. It is an important part of the Enumerator's duties thus to complete the returns when defective, and to correct them when erroneous. They should continue this task up to 11 P.M.

(k) At eleven P.M. the Enumerators should proceed to enter in blank forms specially provided for this purpose all the houseless persons found passing the night in open places, Dharmshálas, &c., within their respective Blocks.

(l) After entering fully all the houseless persons, the Enumerator will cease work until 5 A.M. on the following morning (18th February), when he will resume the recovery and examination of schedules until his Block has been completed.

(m) All persons arriving within the limits of the City and Island before midnight on 17th February must be included in the return of the place in Bombay where they are stopping, and any of such persons who occupy a separate house or apartment should be provided with a separate schedule.

(n) When all the schedules in the Block have been duly recovered, which is ascertained by the total being found to tally with the total number distributed as previously recorded in the Register, the Enumerator should proceed with them to the Office of the Police Inspector in charge of the Section, and there fill in the table printed on the label with which the schedules of each Block are to be tied up into a separate bundle. Before being so tied up the Sectional Police Officer will have them counted, so as to see that they tally with the number recorded in his Register against the name of the Enumerator. When all the Block bundles are complete they will be placed in a cart and conveyed under the charge of a Police Constable to the Census Office, accompanied by the Enumerators, who must then hand over the bundles relating to their respective Blocks to the registering Clerk, and wait until the receipt has been duly recorded.

(o) Enumerators are to scrupulously obey all orders and instructions given them by or through the Police Inspector charge of the Section in which their Blocks are situated. They are strictly forbidden to insist upon asking the name of any female when any objection is made by her or any member of her family to giving it, or to insist upon seeing any female who is not voluntarily brought before him, or to make any inquiries such as about any person's income, &c., which are not required for the purpose of filling in the schedule. Any Enumerator found taking an illegal gratification from any person will be punished as if a public servant, under the sections of the Penal Code applicable to such offences.

T. S. WEIR,
Acting Municipal Commissioner.

Appendix H.

NOTICE.

(Distributed widely by Placards, &c.)

A CENSUS of the population of THIS CITY WILL BE TAKEN on the night of THURSDAY, 17th February (Mágh vad 3). Schedules showing what information is required will be distributed to every householder beforehand, and he must fill in the blank columns for himself and all the members of his family, or get some neighbour to do this for him, or, if he cannot manage to do either, he must tell the Enumerator the correct details and ask him to fill the form up for him.

2. Residents of this City will remember that a General Census was taken nine years ago. It is the intention of Government and the Municipality to have such enumerations made every ten years or so, as is the practice in other countries, in order that they may ascertain what variations in the number, caste, occupations and education of the people have taken place in the interval, without knowing which they cannot take steps for improving or benefiting the latter in the way of establishing schools and hospitals, and by taking similar sanitary and other measures. The Census has to be taken at night, because then the householders and their families are not out at their work, and by enumerating all the houses at the same time it is most probable that no persons will be counted twice.

3. It must be understood that no householder is called upon to record the names of the female inmates of his tenement, nor their relationship to himself or any other individual, but he is bound legally to give all the rest of the particulars asked for regarding them, as their age, occupation, &c. No female is obliged to mention the name of her husband, whether he be alive or dead, nor can any Census Officer insist upon seeing any female not voluntarily brought before him by her relations. This being the order of Government, no householder need have any scruple about entering the correct numbers, sex, ages and other particulars about the females in his house, because the Enumerator will not try to identify the individual females who are entered in the Return.

4. The names of men are only required to be given in order to assist the Enumerators in finding out the houses in their blocks, and in collecting and examining the Schedules when filled up. When the form has been once recovered no list is to be made of individual names, because all that is wanted is the total number of persons, &c. in each Section, such as the number of Hindus, Mussulmans, Parsees, &c., in Girgaon, or Oomarkhari, and so on. It is therefore evident from this that no use can be made of the Census papers in connection with taxation or recruiting for the army, as Government will not ask who the people are that are entered, but only how many.

5. The Schedules when filled in will be all collected into one office under a special Superintendent, who has strict instructions to allow no one to see the entries made in them except the writers employed in preparing the General Abstracts. There is no chance, therefore, of the private circumstances of any individual becoming known to the public.

6. By an Act passed by H. E. the Viceroy and Governor-General, Census Returns are not admissible in evidence in any civil proceeding, or in proceedings before a Magistrate about possession and maintenance.

7. The Municipal Commissioner hopes that all persons, being reassured by the above announcement, will feel confident that by filling up correctly and fully the forms given them no injury will result to them in either reputation or property, and will accordingly loyally assist Government by furnishing the information required according to the instructions printed on every Schedule.

T. S. WEIR,

Acting Municipal Commissioner.

Appendix H—(*continued*).

जाहीरनामा.

या मुंबई शहरांतील लोकवस्तीची खानेसुमारी तारीख १७ माहे फेब्रुवारी सन १८८१ गुरुवार (माघ वद्य ३) रोजी रात्री घेतली जाईल. जी माहिती पाहिजे त्या विषयींचीं पत्रकें प्रत्येक कुटुंबाच्या मुख्य मनुष्यास अगोदर वाटलीं जातील, आणि त्याने त्यांतील कोऱ्या कोष्टकांत आपली व आपल्या कुटुंबांतील सर्व माणसांची तपशीलवार हकीकत भरावी अथवा आपल्या शेजाऱ्याकडून भरवावी. या दोहींतून एकही त्याच्यानें होत नसेल तर त्यानें गणती करणारास (इन्युमरेटरास) खरी तपशीलवार हकीकत सांगावी आणि त्यास आपणाकरितां तें पत्रक भरण्यास सांगावें.

२. या शहरांतील रहिवाश्यांस स्मरत असेल कीं, सर्व लोकवस्तीची खानेसुमारी ९ वर्षांमागें घेतली होती. दुसऱ्या देशांतील चालीप्रमाणें प्रत्येक १० वर्षांनीं अथवा त्या सुमारास लोक संख्येमध्यें, जातीमध्यें, धंद्यामध्यें आणि लोकांच्या विद्येमध्यें दरम्यानचे वेळांत काय काय फेरफार झाले आहेत हे समजण्यासाठीं सरकारचा व म्युनिसिपालिटीचा अशी गणती करण्याचा उद्देश आहे; वरील माहितीवांचून शाळा व दवाखाने वगैरे शिक्षणाचीं, आरोग्य रक्षणाचीं व दुसरीं अशाच प्रकारचीं कामें करून लोकांची स्थीति सुधारण्यास व त्यांचें हित करण्यास सरकारच्यानें कांहीं उपाय करवत नाहीं. खानेसुमारी रात्रीं घेतली जाईल, कारण कीं त्यावेळीं कुटुंबांतील मुख्य आणि त्यांच्या घरांतील माणसें बाहेर आपापल्या धंद्यावर नसतात आणि सर्व घरें एकाच वेळीं मोजल्या कारणानें तींच मनुष्यें बहुत करून दोनवेळां गणलीं जाणार नाहींत.

३. आपल्या घरांतील स्त्रियांचीं नांवें व त्यांचा आपल्या बरोबर व दुसऱ्या एखाद्या इसमा बरोबर काय संबंध आहे हें कुटुंबांतील मुख्यानें लिहूनच दिलें पाहिजे असें नाहीं, परंतु त्यांच्या विषयीं बाकी सर्व तपशीलवार विचारलेली हकीकत म्हणजे त्यांचें वय, धंदा वगैरे त्याला कायदा प्रमाणें देणें भाग आहे. कोणत्याही स्त्रीस आपल्या नवऱ्याचें नांव, मग तो जिवंत असो किंवा मेलेला असो, सांगणें जरूर नाहीं. आणि कोणत्याही खानेसुमारीच्या कामगारानें (सेन्सस ऑफिसरानें) आपल्या समोर नातलगानें खुशीनें न आणलेल्या स्त्रियेस पाहाण्या विषयीं अट धरूं नये. असा सरकाराचा हुकूम असल्या कारणानें कुटुंबांतील मुख्यानें आपल्या घरांतील स्त्रियांची खरी संख्या, व्यक्तिभेद, वय, आणि दुसरी हकीकत भरण्या विषयीं मनांत कांहीं दिकत बाळगूं नये, कारण कीं पत्रकांत दाखल केलेल्या स्त्रिया अमुकच हें समजण्या विषयीं गणती करणारा (इन्युमरेटर) प्रयत्न करणार नाहीं.

४. आपल्या हद्दींमध्यें घरें शोधून काढण्यासाठीं आणि पत्रकें भरलीं म्हणजे तीं जमा करून तपासण्यासाठीं गणती करणाऱ्यास (इन्युमरेटरास) मदत व्हावी म्हणून मनुष्यांचीं नांवें मात्र दिलीं पाहिजेत. पत्रक परत घेतल्या नंतर प्रत्येकाच्या नांवाची याद करावयाची नाहीं. प्रत्येक भागांत (सेक्सनमध्यें) अमुक लोकसंख्या आहे एवढेंच समजणें अवश्य आहे जसें गिरगांव, उमरखाडी इत्यादि ठिकाणीं अमुक हिंदू, अमुक मुसलमान, अमुक पारशी इत्यादि. यावरून हें ही उघड आहे कीं खानेसुमारीच्या माहितीचा कराच्या संबंधानें व सैन्यासाठीं लोक जमविण्याच्या हेतूनें अगदीं उपयोग केला जाणार नाहीं, कारण कीं ज्या लोकांचीं नांवें भरलीं आहेत ते कोण आहेत असें सरकार विचारणार नाहीं परंतु त्यांची संख्या किती आहे अशीच मात्र चौकशी करतील.

५. पत्रकें भरलीं म्हणजे तीं सर्व त्याच कामासाठीं नेमलेल्या (स्पेशल) सुपरिन्टेन्डन्टच्या देखरेखे खालील एका हफीसांत जमा केलीं जातील. साधारण एकंदर तेरीज (जनरल आब्स्ट्राक्ट) करण्यासाठीं ज्या कारकुनांची नेमणूक होईल त्या खेरीज दुसऱ्या कोणास लिहिलेली माहिती पाहूं देऊं नये असा सक्त हुकूम त्या सुपरिन्टेन्डन्टास केला आहे, म्हणून कोणतेंही मनुष्याची गुप्त गोष्ट लोकांस समजण्यास मार्ग नाहीं.

६. व्हाइसराय आणि गवरनर जनरल साहेबांनीं कायदा केल्या अन्वयें खानेसुमारीचीं पत्रकें कोणत्याही दिवाणी खटल्यांत अथवा माजिस्त्रेटापुढें जमीन वगैरे ताब्यांत घेण्याच्या व अन्न वस्त्राच्या खटल्यांत पुराव्यांत घेतलीं जाणार नाहींत.

७. आपणास पत्रकें मिळालीं आहेत तीं खऱ्या रीतीनें व पूर्णपणें भरल्यानें आपल्या कीर्तीस अथवा जिंदगीस कांहीं धक्का पोहोंचणार नाहीं अशी सर्व लोकांची वरील जाहिरातीनें पक्की खात्री होईल, व ते त्याप्रमाणें प्रत्येक पत्रकावर छापलेल्या सूचने प्रमाणें बातमी देऊन सरकारास राजनिष्ठतेनें मदत करतील अशी म्युनिसिपाल कमिशनर साहेबास आशा आहे.

टी. एस. वेर,

काम चालवणार म्युनिसिपाल कमिशनर.

Appendix H—(*continued*).

જાહેર ખબર.

૧. આ શેહેરની વસતીની ગણત્રી માહ વદ ૭ ને વાર ગરેઉ તા૦ ૧૭ મી ફેબ્રવારી સને ૧૮૮૧ ની રાત્રે કરવામાં આવશે. માગેલી હકીકત ભરવા સારૂ દરેક કુટુંબના મુખ્ય માણસને ફારમ આપવામાં આવશે તે ફારમમાં દરેક કુટુંબના મુખ્ય માણસે પોતાની તથા પોતાના કુટુંબના તમામ માણસોની વીગતવાર હકીકત પોતે લખવી. પોતાથી નહી લખી સકાતું હોય તો કોઈ પડોશી પાસેથી લખાવવું અથવા એમાનું એકે નહી બને તો ગણત્રી કરનાર માણસ પાસે બરાબર ખબર આપી ફારમ લખાવવું.

૨. આ શેહેરના રેહેવાસીઓને ઈઆદ હશે કે નવ વરસ ઉપર એક સામાન્ય ગણત્રી કરવામાં આવી હતી. સરકાર અને મ્યુનીસીપાલીટીનો એવો વીચાર છે કે જેમ બીજા દેશોમાં ચાલછે તે પ્રમાણે દર દસ વર્ષે વસ્તીની ગણત્રી કરવી અને તે એટલાજ હેતુથી કે દસ વરસની અંદર લોકની સંખ્યા, જાત, ધંધા અને કેલવણીમાં સું સું ફેરફાર થયોછે તે જણાઈ આવે, અને તેથી નિશાલો તથા હોસપીટલો સ્થાપવાને અને શેહર સુધરાઈ ખાતાંના બીજા બાંધકામો કરવાને સેહેલ પડે. ગણત્રી રાતના કરવાને સબબ એછે કે તે વખતે ઘરના માણસો પોતાના ઘરમાં મલી શકેછે, તેમજ એકજ વખતે દરેક ઘરની ગણત્રી કરવાથી માણસોની બેવડી ગણત્રી થશે નહી.

૩. કોઈપણ પુરૂષને પોતાના ઘરના બૈરાંઓના નામ અથવા તેઓની સાથેની પોતાની અથવા કોઈ બીજા સખસની સગાઈ વીશે ખબર આપવાની ફરજ નથી પણ કાયદા પ્રમાણે તેઓની ઉમર, ધંધા અને એવી બીજી જાતની ખબર આપવાને તેઓ બંધાયલાછે. કોઈ સ્ત્રીને પોતાના વરનુ નામ (ધણી જીવતો હોય કે મુઆ મરી ગએલો હોય) કેહેવાની ફરજ નથી. ગણતરી કરનાર અધીકારની રૂબરૂ હાજર થવું એ સ્ત્રીની અથવા તેહના સગાવાહલાની ખુશી ઉપર રહેલું છે. બૈરાંઓને હાજર કરવાની કાંઈ ફરજ નથી. માટે કુટુંબની ખરી સંખ્યા, જાત, વય અને ધંધા વીશે તથા ઘરની સ્ત્રીઓ વીશે બીજી ખબર બરાબર લખવા વીશે આનાકાની કરવી નહી, ગણત્રી કરનાર સખસ પત્રકમાં નોધેલી દરેક સ્ત્રીઓને ઓલખવાની કોશીસ કરશે નહી.

૪. ગણત્રી કરનારાઓને તેઓની હદ માહેલા સખસોના ઘરો સોધી કાઢવા અને ફારમો એકઠા કરવા અને બરાબર લખ્યા છે કે નહીં તે તપાસવાને બની આવે એટલાસારૂ ફકત પુરૂષોનાં નામ લખવાની જરૂર છે. ફારમ એકઠાં કર્યા પછી દરેક સખસોના નામની ટીપ કરવાની નથી. દરેક વાડી અથવા મોહલ્લામાં એકંદર કેટલી સંખ્યા છે તે જાણવાની જરૂર છે, જેમ કે ગીરગામ અથવા ઉમરખાડીમાં હિંદુ, મુસલમાન અને પારસીઓની સંખ્યા કેટલી છે તેજ માત્ર જાણવાનું છે, અને એથી ખુલ્લું દેખાશે કે કર સંબંધી અથવા લશકર વધારવા સંબંધી વસ્તી પત્રકોનો ઉપયોગ થઈશકનાર નથી. ફારમમાં નોધેલા સખસો કોણછે તે સરકાર જાણવા માગતા નથી પણ કેટલા છે તે ફકત જાણવા માગેછે.

૫. પત્રકો ભરાયા પછી એકઠાં કરી એક ખાસ ઓફીદારની હાજીસમાં પત્રકો રાખવામાં આવશે. જેનરલ આબસ્ટ્રેકત કરનાર (વર્ગ જુદા પાડનાર કારકુનો) શિવાય બીજા કોઈ પણ સખસને પત્રમાંથી નોધ જોવા દેવી નહીં એ વીષે સખત હુકમ કરવામાં આવ્યો છે. આ પ્રમાણે હુકમ કરવાથી કોઇપણ સખસની ખાનગી હાલત લોકોને જાહેર થવાનો કાંઈ પણ સંભવ નથી.

૬. નામદાર વાઇસરાએ અને ગવરનર જેનરલ સાહેબના હુકમથી કાયદો પસાર કરવામાં આવ્યો છે તેમા ફરમાવ્યું છે કે કબજાના તથા ભરણ પોષણના દીવાની અથવા ફોજદારી કામોમાં વસતી પત્રક પુરાવામા ગણાશે નહી.

૭. મ્યુનીસીપાલ કમીશનર સાહેબ આશા રાખેછે કે ઉપલા જાહેરનામાંથી સર્વ લોક ભરોસો રાખશે કે જે ફારમ તેઓને આપવામાં આવ્યા છે તે ખરેખરા અને વીગતવાર ભરવાથી તેઓની આબરૂ અથવા મીલકતને કંઈપણ નુકશાન થવાનું નથી અને આપેલી સુચના મુજબ જોઈતી ખબરો પુરી પાડીને સરકારને મદદ કરશે.

ટી. એસ. લેર,

કામ ચલાઉ મ્યુનીસીપાલ કમીશનર.

Appendix I.

اشتہار

۱ اس شہر کے آبادی کی مردم شماری ۱۷ فبروری روز پنجشنبہ ۱۸۸۱ء کی رات مطابق تاریخ ۱۱ ماہ ربیع الاول روز پنجشنبہ سنہ ۱۲۹۸ ہجری کو کیجائیگی تفتیشات متعلقہ کیفیت ضروری ہر مکاندار کو پہلے سے تقسیم کئے جاوینگے اور مکاندار کو لازم ہی کہ وہ اون سادہ خانون کو پہلے سے معہ اپنے اور تمام گھر کے لوگون کے تفصیل وار حقیقت سے بھر رکھے یا اپنے کسی ہمسایہ سے بھروا رکھے اور اگر ان دونون باتون مین سے ایک بھی نہ بن پڑے تو وہ مہتمم خانہ شماری کو صحیح صحیح اطلاع دے اور اوس سے نقشہ کی خانہ پُری کرالے ✣

۲ شہر والون کو یاد ہوگا کہ نو برس ہوئے کہ ایک عام مردم شماری کی گئی تھی اب سرکار اور میونسپل کی کا یہہ ارادہ ہی کہ ہر دس برس پر اسی مواقی مردم شماری کیجاوے جیسا کہ اور غیر ملکون مین دستور ہی تاکہ یہہ معلوم رہے کہ رعایا کی تعداد قوم و پیشہ اور تعلیم مین کیا کیا فرق اس عرصے مین پڑا بغیر اسکے وہ رعایا کے فائدے اور ترقی کے لئے انتظام نہین کرسکتے یعنے مدرسہ اسپتال اور دوسرے ایسے تندرستی کے معاملات کے قایم رکھنے کا بندوبست نہین ہوسکتا شب کے وقت مردم شماری کیجاویگی کیونکہ اوسوقت مکاندار اور اونکے تمام اہل وعیال گھر سے باہر نہین رہتے اور ایک ہی وقت اس قسم کی خانہ شماری سے اغلب ہی کہ لوگون کی دوباری مردم شماری نہ ہو ✣

۳ لوگونکو یہہ بھی ضرور یاد رہے کہ کسی صاحب مکان کو یہہ ضرور نہین ہی کہ اپنی مستورات کا نام لکھادے نہ اس بات کا ذکر کہ اوس سے اور مستورات یا دوسرے شخص سے کیا واسطہ ہی لیکن یہہ اوسپر ضرور فرض ہی کہ باقی اور کیفیتین جو اونکی نسبت یا اونکی عمر یا پیشے کے بارہ مین دریافت کیجاوین بتلادے عورتون پر اپنے خاوند متوفی یا زندہ کے نام کے بتانیکے لئے جبر نکیا جائیگا اور نہ کوئی افسر مردم شماری اس بات کی ضد کریگا کہ خواہ مخواہ عورتین ہمارے سامنے آئین جنکا کہ باہر آنا اونکے رشتہ دارونکو گوارا نہو چونکہ سرکار کا یہہ ہی حکم ہی اسلئے صاحب مکان کو صحیح تعداد جنس مرد یا عورت و عمر اور اور دوسری کیفیتین جو اوپر لکھی گئی ہین اونکی لکھائی مین کچھہ وہم وگمان کرنا لازم نہین کیونکہ مہتمم مردم شماری خاص عورتونکے نقشون مین لکھے گئے کی تحقیق نہین کریگا ✣

۴ مردونکے نام کی صرف یہہ ضرورت ہی کہ مہتمم مردم شماری کو رجسٹر پر اونکے پتہ دریافت کرنے اور لکھے ہوئے نقشونکے جانچ کرنے اور جمع کرنیمین آسانی ہو جب نقشہ ایک دفعہ مل گیا آدمیونکے نام کی ضرورت نہین رہے کیونکہ اتنا ہی معلوم کرنا ضروری ہی کہ حصے مین اتنے لوگ ہین جیسے گیرگانون عمر کھاڑی وغیرہ ٹھکانے مین اتنے مسلمان اور پارسیون وغیرہ کی کل تعداد اتنی ہی پس یہہ صاف ظاہر ہی کہ ان کاغذات مردم شماری سے ٹیکس لگانے یا فوج مین بھرتی کرنیکی کچھہ غرض نہین گورنمنٹ یہہ دریافت نہین کرتی کہ مردمان مذکون ہین مگر اتنا کہ کتنے ہین ✣

۵ تمام کاغذات مردم شماری ایک دفتر مین جمع کئے جاوینگے اور ایک خاص مہتمم اونکا مقرر رہوگا جسکو کہ تاکید اکید ہی کہ سوائے اون محررونکے جو جنرل ابسٹرکٹ کے بنانیکے واسطے مقرر ہون دوسرونکو نہ دکھلاوین پس اب کسی شخص کے خاص حالتونکا دوسرون پر ظاہر ہونیکا احتمال بھی نہین ہی ✣

۶ حسب منشا ایکٹ مجاریہ حضور وایسرای گورنر جنرل بہادر تختہ مردم شماری کسی مجسٹریٹ کے روبرو درباره اوسکی گذران اور ملکیت کی کسی سول کارروائی یا اور کارروائیون مین بطور شہادت جائز نہین ہونگے ✣

Appendix L.

A DIVISION.

"COLABA" Section.

"COLABA" SECTION is bounded on the east, south, and west by the sea, and on the north by Apollo Bunder Road, Wodehouse Road, and Wodehouse Overbridge. Colaba is divided into two sub-sections by a line drawn across the land from sea to sea at the north wall of St. John's Church; all south of this line is Upper Colaba.

"FORT-SOUTH" Section.

"FORT-SOUTHERN" SECTION is bounded on the east by the Harbour, on the west by Rampart Row, on the north by Church Gate Street, north side Elphinstone Circle Road to road between Town Hall and Mint to Bombay Castle and Harbour, on the south by Apollo Bunder Road and Rampart Row.

"FORT-NORTH" Section.

"FORT-NORTHERN" SECTION is bounded on the east by the Harbour, on the west by Hornby Row, on the north by Hornby Row, Fort Street Port Trust, and on the south by Church Gate Street, north-side Elphinstone Circle to road between Town Hall and Mint to Bombay Castle and Harbour.

"ESPLANADE" Section.

"ESPLANADE" SECTION is bounded on the north by Carnac Bunder Centre Road, Esplanade Cross Road, 1st Marine Lane south side, 1st Marine Cross Lane south side, and by a portion of Marine Lane, the tombs and thence south side to the level crossing at Marine Lines Station to the sea at Back Bay; on the south by Wodehouse Road and Rampart Row; on the east by Harbour from Carnac Bunder to Fort Street, Hornby Row and Rampart Row; and on the west by Back Bay from Wodehouse Bridge to opposite Marine Lines Station.

B DIVISION.

"MARKET" Section.

"MARKET" SECTION is bounded on the east by Syed Abdool Raymon Street, on the west by Kalbadavy Road, on the north by Pydhowny and Parell Road, and on the south by the Esplanade Cross Road from Syed Abdool Raymon Street to the Kalbadavy Road.

"MANDVEE" Section.

"MANDVEE" SECTION is bounded on the east by the Harbour from Carnac Bunder to Musjid Bunder Siding Road; on the west by Old Cazee Street, 2nd Coombharwada, and Dontar 3rd Street; on the north by Coombhar Bowl Street, Chambarwady Lane, Chinch Bunder 1st Row, and Musjid Bunder Siding Road to sea; and on the south by Esplanade Cross Road and Carnac Bunder Centre Road.

"CHUKLA" Section.

"CHUKLA" SECTION is bounded on the north by Pydhowny Street, on the south by Esplanade Cross Road, on the east by Old Cazee Street, 2nd Coombharwada, and Dontar 3rd Street, on the west by Syed Abdool Raymon Street and Pydhowny Police Station,

"OOMBURKHAREE" Section.

"OOMBURKHAREE" SECTION is bounded on the north by Baboola Tank Road, on the south by Pydhowny Road, Coombhar Bowl Street, and Chambarwada Lane; on the east by Chinch Bunder 3rd Row and Jail Road East side or Dongree Bazaar Road; and on the west by Bhendy Bazaar from Pydhowny to J. J. Hospital.

"DONGREE" Section.

"DONGREE" SECTION is bounded on the north by Waree Bunder New Road to Clerk Basin, on the south by Chinch Bunder 1st Row, and Musjid Bunder Siding Road, on the east by the Harbour from Musjid Bunder Siding Road to Clerk Basin, and on the west by Chinch Bunder 3rd Row, Jail Road East side or Dongree Bazaar Road, and Mazagon Road.

C DIVISION.

"DHOBEE TALAO" Section.

"DHOBEE TALAO" SECTION is bounded on the north by Dady Sett's Agiary Lane, portion of Breach Candy Road to Old Sonapore Lane, and footpath through Mahomedan Graveyard to door of Hindoo Burning-ground on Queen's Road, thence by a straight line across Queen's Road to the sea at Back Bay; on the south by Esplanade Cross Road north side in front of Money School, 1st Marine Lane north side, 1st Marine Cross Lane north side and thence to level-crossing at Marine Lines Station to the sea at Back Bay; on the west by Back Bay from foreshore opposite Marine Lines Station to opposite the gate of the Hindoo Burning-ground or Queen's Road; and on the east by Kalbadavy Road.

"PHUNUSWAREE" Section.

"PHUNUSWAREE" SECTION is bounded on the north by Thackordwar Road, Churney Road, and by Churney Road level-crossing to Back Bay; on the south by Dady Sett's Agiary Lane, a portion of Breach Candy Road, Old Sonapore Lane, and footpath through Mahomedan Graveyard to door of Hindoo Burning-ground, and by a straight line across Queen's Road from gate of Burning-ground to Back Bay; on the west by Back Bay from opposite gate of Burning-ground to foreshore opposite Churney Road level-crossing; and on the east by Portuguese Church Street and Bhooleshwur Road.

"BHOOLESHWUR" Section.

"BHOOLESHWUR" SECTION is bounded on the north by Erskine Road and Cowasjee Patell Tank Road, on the south by a portion of Dady Sett's Agiary Street, on the east by a portion of Kalbadavy Road, Mombadavy Road, and part of Bhendy Bazaar or Parell Road, on the west by Portuguese Church Street and portion of Bhooleshwur Road.

"KHARA TALAO" Section.

"KHARA TALAO" SECTION is bounded on the north by Obelisk Road, on the south by Erskine Road, on the east by Bhendy Bazaar Road, and on the west by Lower Duncan Road.

"KOOMBARWARA" Section.

"KOOMBARWARA" SECTION is bounded on the north by Grant Road; on the south by Cowasjee Patell Tank Road, and a portion of Girgaum Back Road; on the east by Lower Duncan Road; and on the west by Trimbuck Purshotum Street and crossing Falkland Road to Ardaseer Dady Street.

"GIRGAUM" Section.

"GIRGAUM" SECTION is bounded on the south by Thackordwar Road, Churney Road, and level-crossing at Churney Road to sea at Back Bay, on the west by Back Bay to opposite level-crossing on Queen's Road, on the north by Churney Boyd Road and Portuguese Church Road, on the east by a portion of Girgaum Back Road and a portion of Bhooleshwur Road.

"KHETWAREE" Section.

"KHETWAREE" SECTION is bounded on the north by Grant Road, on the south by Girgaum Back Road, on the west by Kennedy Bridge level-crossing, and portion of Breach Candy Road; on the east by Trimbuck Purshotum Street and Ardaseer Dady Street.

D DIVISION.

"CHAOPATEE" Section.

"CHAOPATEE" SECTION is bounded on the north by portion of Girgaum Back Road and by the Kennedy Bridge level-crossing, and portion of Breach Candy Road, on the east by Portuguese Church Road and Churney Boyd Road, on the west by Gaumdavy Road South, and on the south by Back Bay from level-crossing on Queen's Road nearly opposite by Churney Boyd Road to foreshore opposite Gaumdavy Road South.

"WALKESHWUR" Section.

"WALKESHWUR" SECTION is bounded on the west by the sea, on the south by the sea, on the east by Gaumdavy Road South, and on the north by Gowalia Tank Road.

"MAHALUXMEE" Section.

"MAHALUXMEE" SECTION is bounded on the north by Hornby Vellard and portion of Mahaluxmee Road, on the south by Gowalia Tank Road, on the east by Tardeo Road, and on the west by the sea.

E DIVISION.

"MAZAGON" Section.

"MAZAGON" SECTION is bounded on the north by Sewree Road and Frere Bunder, on the south by Waree Bunder New Road and Clerk Basin, on the east by the Harbour, and on the west by Mazagon Road and Mount Road.

"TARWAREE" Section.

"TARWAREE" SECTION is bounded on the north by Chinchpoogly Road, on the south by Baboola Tank Road, on the east by Mazagon and Mount Roads, and on the west by Parell Road.

"CAMATEEPURA" District or Section.

"CAMATEEPURA" DISTRICT OR SECTION is bounded on the north by a line drawn from Parell Road to Arthur Road across the G. I. P. Railway line, between the north wall of Sassoon's Cemetery and Chinchpoogly Station, portion of Arthur Road, a portion of Haines Road, and by a portion of the Toolsee main pipe, on the south by Obelisk Road and Grant Road, on the east by Parell Road, and on the west by Tardeo Road and Mahaluxmee Road to the Hornby Vellard.

Camateepura and Byculla Sections are separated by Bellasis Road and Bellasis Junction Road.

CAMATEEPURA DISTRICT OR SECTION.

- Byculla Section. ..... { Byculla Sub-Section. / First Nagpada Sub-Section.
- Camateepura Section ... { Second Nagpada Sub-Section. / Camateepura Sub-Section. / Tardeo Sub-Section.

BYCULLA SECTION.

Byculla Sub-Section is bounded on the north by a line drawn from Parell Road to Arthur Road across the G. I. P. Ry. line between the north wall of Sassoon's Cemetery and Chinchpoogly Station, a portion of Arthur and Haines Roads, and by a portion of the Toolsee main pipe; on the south by Bellasis Road, a portion of Clare Road, and Shepherd's Road; on the east by Parell Road; and on the west by Mahaluxmee Road to Hornby Vellard.

First Nagpada Sub-Section is bounded on the north by Shepherd's Road, on the south by Bellasis Junction Road, on the east by Parell Road, and on the west by Clare Road.

CAMATEEPURA SECTION.

Second Nagpada Sub-Section is bounded on the North by Bellasis Junction Road, on the south by Obelisk Road, on the east by Parell Road, and on the west by Upper Duncan Road.

Camateepura Sub-Section is bounded on the north by Bellasis Road, on the south by Grant Road, on the east by Upper Duncan Road, and on the west by Cursetjee Sooklajee Street.

Tardeo Sub-Section is bounded on the north by Bellasis Road, on the south by Grant Road, on the east by Cursetjee Sooklajee Street, and on the west by Tardeo Road and Mahaluxmee Road to the Hornby Vellard.

"PARELL" Section.

"PARELL" SECTION is bounded on the north by Bhoocwady Cross Road, Elphinstone Road, and the level-crossing at G. I. P. Railway Station, Parell, and Toolsee main pipe to Haines Road, on the south by a line drawn from Parell Road to Arthur Road across the G. I. P. Ry. line, between the north wall of Sassoon's Cemetery and Chinchpoogly Station, and Chinchpoogly Road, on the east by Parell Tank Road, and on the west by portion of Arthur Road, Dhobee Lines, and Haines Road to Toolsee pipe.

"SEWREE" Section.

"SEWREE" SECTION is bounded on the north by Narayan Dabool's Lane, and by a line from thence across Golangee Hill by the north wall of the Sewree Cemetery to the sea on the north end of the Sewree Fort, on the south by Jakaria Bunder Road, Frere Bunder and Sewree Road, on the east by the Harbour, and on the west by Parell Tank Road.

F DIVISION.

"SION" Section.

"SION" SECTION is bounded on the north by the creek at Sion Causeway, on the south by Elphinstone Road, Bhoocwady Cross Road, portion of Parell Tank Road, and Narayan Dabool's Lane, on the east by the Harbour, and on the west by the B. B. and C. I. Railway line.

"MAHIM" Section.

"MAHIM" SECTION is bounded on the north by the creek at Bandora Causeway, on the south by Purbhadavee Road and B. B. and C. I. level-crossing at Dadur Station, on the east by the B. B. and C. I. line, and on the west by the sea.

"WURLEE" Section.

"WURLEE" SECTION is bounded on the north by Purbhadavee Road and Bunderwady Lane, on the south by Toolsee main pipe, on the east by a portion of DeLisle Road and portion of the B. B. and C. I. line from Parell level-crossing to Dadur Station, and on the west by a part of Hornby Vellard and the sea.
