REPORT

ON THE

MYSORE CENSUS OF 1881.

Introductory.—The task of writing the Report on the results of the Mysore Census of 1881 had been reserved for his own hand by the deceased Dewan, the late Mr. C. Rangacharlu, C. I. E. As coming from him it would undoubtedly have been invested with special interest as well as authority. But up to the time of his death, in January 1883, no commencement it would seem had been made by him in committing to paper any of the views such as it can hardly be questioned his active mind must have formed regarding the various important problems which arise out of the subject.

The work was put into my hands in the middle of 1883, after my return from several months' absence on special duty at Calcutta as Secretary to the Education Commission. I had not previously been in any way connected with the Census, but at this late stage little time was left for deliberation; due allowance will therefore, it is hoped, be made for any marks of hasty or imperfect execution should such be found, which yet I trust may not be the case. It may be added, however, that the difficulties of the work were increased by the fact that the whole of the Districts and Taluqs had undergone reorganization since the date of the Census, and it was desired to distribute the results, so far as this could be done, according to the new arrangements, with a view to convenience of reference for the future.

Special Features of Local Interest.—Apart from the importance which in the nature of the case attaches to the decennial Census simultaneously taken throughout the various Provinces of the Indian Empire, there are certain special circumstances connected with Mysore which contribute to render the recent Census of 1881 in this State of more than usual interest.

The first of these exceptional features is due to the memorable Famine which spread desolation over this country and the neighbouring British territories in 1876 and 1877. The extent to which the direful effects of that visitation had diminished the sum total of inhabitants formed at the time a subject of anxious inquiry; and as a help towards determining the question, a Test Census was held in 1878 of one hobli selected from each of most of the taluqs. The conclusions deduced therefrom may now permit of examination in the fuller light thrown upon the subject by the figures obtained for the whole country.

Moreover the methods employed and the experience gained in taking the Test Census on that occasion furnished valuable suggestions, which were not only adopted again as contributing to ensure accuracy in the present one, but, in consequence of the Mysore Famine Commissioner being appointed as Imperial Census Commissioner, were extended to the whole of India. One of the most effective of these provisions was the Preliminary Record, to be made at leisure and fully verified before the date of the Final Census, when there only remained to check the returns already thus prepared and make such alterations in the entries as had become necessary from subsequent changes.

Another circumstance that lends an interest more than ordinary to the Census now under review is found in the rendition of Mysore to Native rule, which took place on the 25th of March 1881; whence this Census comes to be the final enumeration of the people after the fifty years, dating from the 19th of October 1831, during which the country was under British administration; while it no less serves as a record of what was the number and what the social condition of the subjects now handed over to His Highness the Maharaja.

Test Census of 1878.—In regard to the Test Census, taken on the 19th of January 1878, the following correspondence between the Government of India and the

Secretary of State sets forth concisely the points at issue and the results arrived at. It may, however, be premised that in Mr. Elliott's opinion "the Census that was then taken was as accurate as anything of the kind can be, and probably more accurate than any census ever taken in India before, as the area under each officer was manageably small, and the officers who personally took the preliminary and who examined the final census were all of the higher grades and were both capable and trustworthy."

From the GOVERNMENT OF INDIA, to HER MAJESTY'S SECRETARY OF STATE FOR INDIA, dated Simla, the 6th September 1878.

MY LORD.—We have the honour to forward copies of a report by Mr. C. A. Elliott, late Famine Commissioner, * together with a minute by the Chief Commissioner, on the result of the partial census taken during January last in the famine-stricken province of Mysore.

Mr. Elliott's report shows that in 51 of the sub-divisions (taluqs) of Mysore, a census was taken, with much care, throughout all the villages of a local area called a hobli. The average population of a hobli before the famine was about 8,000 persons. In 17 sub-divisions (taluqs), where the famine was less felt, no test census was taken. In the hoblis where the census was taken, it was found that the total population of 1878 amounted to 294,126 persons, as compared with 412,934 who were reckoned at the census of 1871; thus showing a loss of population equal to 28·77 per cent in the areas where the census was taken. The loss in these hoblis ranged from 47 per cent to 5 per cent of the population. In applying to the rest of the province the results deduced from a census taken in areas aggregating about 8 per cent of the whole country, it was necessary to consider—

(1) how far the local areas chosen were fair specimens of the taluqs and districts which they represented;

(2) how far other known facts confirmed the belief that so terrible a mortality had been general;

(3) how far the loss was apparent, and due to emigration to the coffee districts or elsewhere.

On the first point, Mr. Elliott records that the hoblis selected for the test census were chosen on the best information available, and were meant to be average specimens of the sub-divisions (taluqs) which they represented; that some of the test hoblis turned out to be much worse and some better than the average of their taluqs; but that on the whole the errors on opposite sides probably balance each other. Mr. Gordon † considers that the inferences to be drawn from the partial census are open to correction, because the test census was largely taken in the areas that most severely suffered, and because the partial census did not embrace any of the large towns, where the loss of population was not so great.

On the second point, namely, how far other facts confirm the belief as to the rate of mortality, Mr. Elliott states the following considerations. A preliminary census was taken of the test hoblis during the month from the 15th December to the 15th January, and the actual test census was taken on the night of the 19th January. Between the time of the preliminary census and the date of the actual census, 1,755 deaths and only 96 births had occurred. On the hypothesis ‡ that the average period between the preliminary census and the test census was 20 days, these numbers give an annual death-rate of 127 per mille, and an annual birth-rate of 7 per mille. And these rates are yielded for a period when "there was hardly any famine in the country." In a small area of 11 villages in Coorg, where a census was taken in January 1878, it was found that among 1,134 immigrant coolies from Mysore, who were working on the coffee estates, 313 persons, or 27·6 per cent of the whole, had died during the famine period. The registration of deaths in Mysore is as yet very imperfect. In the five years preceding the famine, the death-rate, according to the registration returns, was 10 per mille per annum. The true death-rate must probably have been thrice the rate so deduced. During the famine year (1877) the registered deaths increased enormously, and yielded an annual death-rate of 44·4 per mille. If the same ratio of error existed as in former years, this rate would be converted into a true rate of 133 per mille, representing a mortality of 674,439, or 520,000 deaths above the normal number of about 150,000 per annum. Mr. Elliott adds that if the January death-rate, according to the deaths that occurred between the preliminary census and the actual census, was actually 127·8 per mille, then the registered deaths of January 1878 were only 22 per cent of the actual mortality; and if the same ratio of correction be applied to the registration returns of 1877, the total deaths of the year would come to 1,011,155.

‡ This hypothesis would be subject to some correction if the bulk of the preliminary census was done during the first half of the month. Seeing that some of the sheets had to be sent to Mr. Elliott and returned by him, and that much of the preliminary census work was tested by superior officers, it is possible that the bulk of the work was done during the last fortnight of December. If this were so, then the deduced death-rate in the text would be proportionately reduced.

Mr. Gordon observes that the information elicited during the preliminary census (when the name of every person who had died or had emigrated was written down), showed that 15·1 per cent of the people had died, that 7·9 per cent had emigrated and were believed to be alive, and that the remainder, 5·77 per cent, were not accounted for. The death-rate during the famine, as ascertained by careful enquiry during the elaborate preliminary census, was in the five worst districts 17 per cent on the total population. If this rate be applied to the 3 millions of the most severely afflicted tracts of the province, the total deaths during the famine would be 510,000; and if the mortality in the remainder of the population be taken at 7 per cent, the ascertained loss in certain less distressed hoblis, then the total loss during the famine would be 650,000 persons.

* Subsequently Secretary to the Famine Commission, then Imperial Census Commissioner for India, and now Chief Commissioner of Assam.

† Sir James D. Gordon, K.C.S.I., now Resident of Mysore and Chief Commissioner of Coorg.

In regard to the third consideration, namely, how far the loss of population may be due to emigration, Mr. Elliott estimates that in ordinary times 150,000 labourers emigrate annually, between November and February, to the coffee districts of Coorg and the Wynaad. He believes that the emigration in 1877 may have reached 350,000 persons, or 200,000 more than usual. But he fears that out of the extra 200,000, one half, or 100,000, must have died, and will never return. Mr. Gordon estimates the ordinary and extraordinary emigration to the coffee districts at about 500,000 people. He considers that out of the decrease of the rural population as deduced from the test census, 100,000 may be accounted for among the relief labourers, wanderers and stragglers in the large towns. It appears that the area under coffee, and the consequent number of coolies employed, has increased considerably since 1871, so that there is ground for supposing that the ordinary emigration in 1877 would have been larger than it was in 1871.

After applying all the corrections he can, and after assuming the normal increase of the population previous to the famine year to have been ½ per cent per annum, Mr Elliott comes to the conclusion that the loss of population in Mysore during the famine must have been 1,100,000 out of a total population of 5,207,074; and that out of this loss, about 50,000 may have been due to the diminution of births caused by want and suffering among the adult population. Mr. Gordon considers that "we are not justified in assuming a higher figure than 700,000 for the mortality from all causes during the famine year, so far as any estimate can be formed from the partial census taken".

Mr. Elliott, though he was only six months in Mysore, gained in that time a remarkable insight into Mysore affairs; he was constantly moving among the people and the local officers; he directed the test census, as indeed he did all relief operations after September 1877, with ability and industry; and we consider him a most competent observer and judge in a matter of the kind now under consideration. Mr. Gordon has been employed in Mysore for nine years; he knows the country and the people well; after filling successfully the second post in the Administration, he is now the head of the Local Government; and we are accustomed to attach much weight to his opinions and judgment. When two officers like Mr. Gordon and Mr. Elliott thus differ as to the deductions to be drawn from data which are confessedly imperfect and subject to much correction, we hesitate to say what should be our conclusions.

In the absence of trustworthy vital statistics, we are in a great measure driven to hypotheses in discussing such questions as these. If we accept as normal the yearly death-rate that is named in para. 4, or 3 per cent, and if we suppose that the normal yearly birth-rate is somewhat in excess of this, say 3½ per cent, it would follow that a simultaneous increase of the former rate and decrease of the latter, in the proportion say of about 1 to 2, would lead to a yearly loss from deaths of 6 per cent, with a set off from births, say of 1½ per cent, giving a net loss of 4½ per cent per annum; and this continued for two years would lead to a reduction of the total population of 9 per cent, or on 5 millions to no less than 450,000 persons. Altering the ratio of death and birth-rates as 1 to 3, the loss for two years would be 16 per cent, or 800,000 persons. Thus a mortality not very excessive in itself, combined with a failure of births, such as we know to be one of the concomitants of famine, is not incompatible with a very large diminution of the population in a comparatively short time. In the actual case the period of acute distress was probably not more than one year, reckoning to the date of the census, and these calculations must only be taken as illustrative of our argument. It would be premature for us in the present condition of our knowledge to say that the great reduction of the population, which has almost certainly occurred, may be more probably due to this combination of causes than to positive mortality; but the alternative is one that deserves attention, and we find in it grounds for suspending our judgment on facts which are still very imperfectly appreciated.

The subject will continue to receive our consideration, and we shall probably act on Mr. Gordon's suggestions that a general census of the whole of Mysore and Coorg should be taken again on some date before the province is finally made over to the government of the Maharaja. It may be expedient to undertake this shortly, and to extend such a census to the provinces of Madras and Bombay which have suffered from the late famine. Until such a census is taken, the true reduction of the population during the famine will not be known with any certainty. But wherever the truth lies, whether the loss of life from famine has been 1,050,000 as estimated by Mr. Elliott, or 700,000 as estimated by Mr. Gordon, or whether the reduction of numbers has been to any considerable extent caused by a failure of births, leaving the deaths at some smaller number than either of these estimates, there is no possibility for doubt that the mortality from famine in Mysore has been most deplorably great. We hope to submit shortly a report upon the Mysore famine, which will assist in judging how far this most distressing result may have been due to causes that could have been remedied at the time, or that can be adequately met hereafter, when calamities, such as overtook Mysore in 1876—77, again befall any part of the Indian Empire.

(Signed) LYTTON, &c., &c.

From the SECRETARY OF STATE for INDIA, to the GOVERNOR GENERAL OF INDIA IN COUNCIL, dated London, 7th November 1878.

MY LORD.—The Despatch of your Excellency in Council, dated 6th September, No. 55 of 1878, forwarding copy of a report by Mr. C. A. Elliott on the result of the partial census taken in Mysore in January last, has been considered by me in Council.

Mr. Elliott's report is a clear and able document, but it is impossible to decide on data confessedly imperfect, whether his estimate which places the deaths during the famine at 1,050,000 is more correct than that of the Chief Commissioner, Mr. J. D. Gordon, which suggests 700,000 as the right conclusion. One fact is certain, that whichever estimate is accepted the loss of life has been lamentable.

How far this melancholy sacrifice of life is due to causes which could at the time have been rendered less severe, or how far such causes can be met in any future similar visitation, are questions of the gravest importance, which I am confident will receive anxious attention from your Lordship in Council, and from the Famine Commission. One conclusion, suggested by the correspondence, appears to be very clear, that no safe opinion can be pronounced as to the mortality from the famine without the institution of a general census of the whole province of Mysore. The question when such census shall be undertaken I shall leave to the decision of your Excellency in Council.

(Signed) CRANBROOK.

Proposals for General Census in Mysore.—The Mysore Government, on being consulted regarding the latter point, replied on the 15th February 1879 that if it was intended to take a General Census for the whole of India on or about the night of full moon in January 1881 "in the opinion of the Chief Commissioner that Census will serve all the purposes for which one is now desired.

"A Census taken early in 1881 will be of advantage in every way. No material increase to the population is likely to take place that could not easily be marked by the enumeration of infants, while the emigrant and scattered population will have long since returned and settled so far as they intend to return and settle. A Census taken on that date will therefore serve to show the loss by famine and the rate at which the country is recovering. It will also be valuable as a record of the population at the time of the restoration of the Province to Native rule, a record which for purposes of future comparison may be of the greatest utility.

"If it is decided therefore by Government that there shall be a General Census in 1881, it is submitted that there exists no necessity for taking a Census in Mysore previous to that."

The Government of India, under date the 13th March 1879, replied to the Chief Commissioner that "as it is proposed to take a General Census of the whole of India in the early part of the year 1881, His Excellency the Governor General in Council has been pleased to accept your proposal to postpone the Census of Mysore until that date."

OPERATIONS OF THE CENSUS.

Census of 1881.—The Census now reported on was eventually taken on the night of the 17th of February 1881, and the following is a description of the arrangements made for ensuring that minute and perfect accuracy in all its details without which the value of such a work is greatly impaired.

General Instructions.—The first instructions on the subject were issued on the 11th of June 1880, when directions were given for numbering the houses and making a Preliminary Record of the population, so that on the actual day of the Census it would simply remain to examine and correct the schedules with reference to the facts as then existing. Except within the municipal limits of Bangalore and Mysore, where the municipal authorities were required to make the necessary arrangements, the Census operations in the rest of the Province were placed under the Deputy Commissioners of the Districts, who would be held responsible for the successful completion of the work. The following extracts will show the nature of the orders given:—

The territorial divisions for which the Census results require to be tabulated are the District, the Taluq and the Village. The Hoblis, which are subject to alterations, need not be separately tabulated for, though the Supervisors' circles have to be arranged with reference to them.

The village will then be the territorial unit for the Census, and the record of the population in it should be made house by house, for which purpose the houses in the village and all its dependent hamlets should be numbered consecutively in the order of their proximity, the numbering in each hamlet or group of houses commencing after the last number in the preceding group. If any house omitted in such numbering has to be afterwards added, for which, however, there should scarcely be any occasion, it should follow the last number on the list with the necessary remark, and not bear a fractional number.

A "House" is defined as comprising the several dwelling rooms, including servants' quarters, which go to make up a homestead, whether occupied by one or more families. The term "Enclosure" used in the previous Census is discarded, and the classification of houses into superior and inferior classes is also dispensed with.

In recording the population in the schedule, inhabited houses and buildings will alone come into account; but the separate register of houses to be prepared as hereinafter directed will include both the inhabited and the vacant dwellings. Shops, schools, temples and similar buildings, which are simply occupied during the day but not used for regular habitation either in whole or in part, are not to be regarded as buildings in human occupation, and ruined houses and buildings in deserted sites are likewise not to be taken account of in the register of houses.

The foregoing indicates the various points which require attention during the Census. The successful completion of the operation will very much depend upon the care and completeness with which the preliminary arrangements are made. These involve (1) the preparation of a complete record of the villages, (2) the numbering of the houses and the preparation of a register of such houses, (3) their division into Enumerators' blocks, (4) the nomination of qualified Enumerators to each village and their careful instruction in regard to the headings of the schedule and other requirements of the Census, (5) the formation of circles for supervision, appointment of Supervisors and other arrangements for the revision of the Enumerators' work both on the occasion of the Preliminary Record and on that of the Final Census.

In regard to the 1st point, the Deputy Commissioners are requested to furnish without loss of time, in the accompanying form, a list of all the villages, Government, Inam, Jodi, Káyamgutta or other descriptions, in each Taluq of their District, grouped into Supervision Circles. In the surveyed taluqs the numerical arrangement of the villages should be made in conformity with the survey accounts, and in others according to the revenue accounts. Dependent hamlets should be grouped with the villages to which they belong, uninhabited villages or hamlets being noted as such; and care should be taken that no village or hamlet is left out or twice entered. In order to facilitate a comparison of the present population of the villages with that recorded in the printed schedules of 1871, any alteration in the areas of villages which may have taken place since that date, whether by the transfer of hamlets or by the grouping of villages in the survey arrangements, or otherwise, should be noted against each village.

The village officials should then be directed to number the houses in each village as well as in its dependent hamlets in the manner already laid down, the number of each house being painted up clearly over its door. In towns, where a system of numbering houses for municipal or other purposes already exists, the same system should be adhered to; but the numbering, which is often incomplete or inaccurate, may with advantage be revised on the present occasion.

The numbering should be examined by the Shekdar in all the villages of his hobli, after which a register of the houses, showing the names of their occupants, should be prepared in the accompanying form in duplicate, one copy of which will be retained by the Shanbhog and the other forwarded through the Taluq to the District Office, whence after necessary examination it will be returned to the Shekdar for his guidance in supervising the Census operations. In the above register, besides the houses, chattrams, temples and other buildings in human occupation, places in and about the village where wandering tribes or travellers usually halt may be noted at the foot that they may not escape attention during the Census. The register of the houses should be finally forwarded to the District Office, with the schedule of the village to which it belongs.

The Deputy Commissioners should next arrange for the appointment of Enumerators and Supervisors. The preliminary enumeration must devolve on the Shanbhog, assisted by the Patel or any other leading ryot in each village. The Deputy Commissioner should satisfy himself that the Shanbhog in each case is qualified for the work. If not qualified, the Shanbhog should be required to appoint a qualified relation or other substitute for the work, and where, as in the unsurveyed taluks, the Shanbhog's charge is unduly large, arrangements should be made for sub-dividing it into convenient separate charges, the Shanbhog being compelled to appoint a separate qualified official for each.

The Chief Commissioner considers it important that the Preliminary Record as well as the Final Enumeration should, in every case, be conducted by more than one individual. The Shanbhog or other member of his family appointed to the work should, therefore, be invariably associated with a respectable ryot of the village.

Where, as in the Malnad, the houses are scattered, a smaller limit of population may require to be fixed for each Enumerator, and if sufficient Enumerators are not available among the village Shanbhogs, paid agency from elsewhere may require to be employed.

With regard to Supervision Circles, the hoblis furnish the best basis for their organization, and the Shekdars will be the most generally available officers for the work. Care should, however, be taken to examine them individually, and if any of them are not qualified, other arrangements should be made in regard to such hoblis. It will be useful to associate with the Shekdar one or two intelligent subordinates of the Police or Educational Department, a Daffedar or Jamadar or a Hobli Schoolmaster. Objections were taken to the employment of police officers in the census, but these objections apply to their employment in the enumeration work and not to the employment of select police officers for supervision.

The Shekdar and the additional Supervisors appointed for the Hobli should divide the villages in the Hobli between them, and examine and check by personal inspection house by house the whole of the Preliminary Record prepared by the Shanbhog for every village.

The preparation of the Preliminary Record and its examination by the Supervisors should be completed by the end of December. The schedules should then be forwarded to the District Office, whence after the necessary examination they will be returned to the Enumerators through the Supervisors in sufficient time to be in their hands a week or ten days before the date of the Final Census.

In the days immediately preceding the Final Census, the Supervising officers should go through all the villages in their Circles and see that all the arrangements for the Final Census are ready. On the night of the Census, they should visit and check the enumeration in as many villages as possible, taking especially the larger villages with miscellaneous population, and villages on the road in which there are likely to be travellers and other floating population to be counted. The villages in the enumeration of which they are thus personally to take part should be previously determined and alloted to them by the Deputy Commissioner.

The enumeration returns of the other villages in the Circle should be examined by the Supervisors on the following days, and then forwarded to the District Office.

It cannot be too strongly impressed that the officers concerned should not content themselves with merely issuing general instructions. They should personally arrange each detail and satisfy themselves that the instructions are thoroughly understood by every one of the persons who have to carry them into effect.

Special arrangements for the Census of the towns should be drawn up and reported. It was noticed on the occasion of the last Census that the Census return of the towns, especially the larger towns of Bangalore and Mysore, were not so accurate as those of the rural villages. This must, in part at least, be attributed to the indiscriminate employment of new and inefficient persons not acquainted with the localities in the enumeration. This should be carefully avoided.

The towns should be divided into convenient Enumeration Blocks, and responsible officials employed in the Taluq or Municipality, associated with the municipal members and other respectable inhabitants of the towns, should be appointed for the Enumeration as well as for the Supervision, and they should be required to familiarize themselves with the streets and lanes and the population they will have to deal with.

As a rule the schedules will be filled in by the Enumerators themselves, but in regard to Jails and Hospitals and other similar cases, the officers in charge may be required to fill in the schedules.

In the former Census, some confusion resulted from the imperfect manner in which the schedules were sent up, which led to one village being mistaken for another, and to various other complications. If the name and number of the village were carefully entered on each sheet as provided in the printed form, it is believed that there can be no room for such inaccuracies.

It was also noticed that there was some remissness in registering the population as regards Outcasts, owing to scruples on the part of the Brahman Shanbhogs to visiting such homesteads. It is useless trying to override such scruples where they really exist. In these cases, careful provision should be made for the enumeration of the outcast population by the Patels and other responsible persons of the non-Brahmanical class.

False rumours of various kinds were referred to as having prevailed. The Chief Commissioner, however, believes that the people are now well acquainted with the object of the measure, and as local agency will only be employed, there will be no room for misapprehension or distrust. These rumours generally proceed from mischief-makers, who should be promptly dealt with if detected. The District Officers should take early steps to give, through the medium of respectable persons of local influence, the widest publicity to the real object of the measure.

An important element of difficulty is the occurrence of great feasts about the time of the Census, which largely draw away the population from their villages and greatly complicate the results. Any such feasts in the several Taluqs of the District, which will occur about the time of the Census, should be reported, with the special arrangements required in regard to the villages which are likely to be affected by them.

It remains only to add that it will be necessary for the District Officers to commence the revenue settlement of the current year earlier than usual, so as to complete the Taluq Jamabandi and a considerable portion of the District Jamabandi, if not the whole of it, before the Village and Hobli officers are taken away for the Census work about the middle of December.

Census Commissioner's opinion.—The Imperial Census Commissioner expressed approval of the rules and made some suggestions, among which was the following:—"As to the use of Private Schedules I recommend that they should be issued to all English householders of respectable position, a special reprint being made of the Schedule on one side, suitable extracts from the Instructions on the other, and a notice attached informing house-holders that they are to enter the names, &c., of their families, visitors, and servants sleeping in the compound, and to give the return to the Enumerator who will call on the 18th February between 9 and 12, drawing attention to the Section in the Act and the penalties on omission to fill up correctly and on bad jokes. I would be content with one enumeration in these cases, not troubling them with a preliminary, but correcting the returns where faulty after the 18th."

Instructions to Enumerators.—The following were the Instructions to Enumerators as finally revised, issued on the 24th November 1880:—

The General Census is to be taken on the night of Thursday the 17th February 1881, but in order to facilitate the work on that day, you are to commence from Monday the 3rd January 1881, to fill in the Schedules for the people living in your Block; and as soon as you have completed the record, you are to forward the Schedule Book to the Supervisor of your Circle, who will examine and return the same to you. On the night of the General Census, *i. e.*, the 17th February 1881, it will only remain for you to visit every house in your block, and to make the necessary corrections in, and additions to, the entries already made, to show the population as actually existing in your block on that night.

The following instructions are laid down for your guidance in filling in the Schedules, and should be carefully attended to.

A. How the Preliminary Record beginning on the 3rd January 1881 is to be prepared.

1. You will enter in the Schedule Book all the people living in your Block. If there is not room for all in one book, another will be given you.

2. You must write very distinctly, in Canarese or English, and in black ink.

3. The population should be recorded house by house. By "House" you will understand a building to which a separate number has been affixed.

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

4. You will take a fresh page for each house. If one page will not suffice for all the inmates of a house, they should be continued on the next page, but the names and particulars of the inmates of a fresh house must not be begun in the middle of a page.

5. The first person entered under each house should be the head of the house, whether male or female. The other members of the family, servants permanently living in the house, and any visitors stopping in the house, should then be entered one after another.

6. You will enter all persons living in, or taking their meals from, the house at the time when the form is filled up, whether members of the family, servants, or visitors and strangers. You will not enter any persons who, though belonging to the family, are at the time absent on journeys, or temporarily residing elsewhere; but you will enter all persons living in the house though at the time sleeping outside or are out of doors, fishing or working in the fields, or watching the crops, or like yourself away from home for some hours on Government business. As regards Hotels, Dâk Bungalows, Chatrams, Temples, and other similar buildings resorted to by travellers and pilgrims, their permanent residents only should be entered at the first counting, leaving the travellers and pilgrims and other temporary visitors at these buildings as well as in encamping grounds and roads to be counted and recorded on the night of the Final Census.

7. *Column* 1.—In this column you should enter a separate number in consecutive order for each person in the house, whether male or female, adult or child. If there are more families than one residing in the house, they will be entered in the Schedule one after the other on the same page which is allotted to the house, and numbered in a single series for the house. The head-member of each family will be entered first, before the other members of the family, and will be distinguished by the name being written in larger letters than the others, with the words "Head Member" prefixed to the name.

8. *Column* 2.—In this column the name of each person and relationship to the head member of the family should be entered. If the name of any female member or child is not known, or if there is any objection to telling it, it will suffice to designate such person as "Female" or "Child." The relationship to the head-member of the family should be written before the name, but it need be entered only where it can be easily ascertained. Servants and visitors will be entered as such.

9. *Column* 3.—In this column, each person should be distinguished as married, unmarried, widow, or widower. Young boys and girls who may have been married should be entered as married, even though they may not have actually begun to live with their wives or husbands. A male or female whose first wife or husband has died, should be entered as widower or widow, unless he or she has married again, in which case he or she is to be entered as married.

10. *Column* 4.—Enter "*Male*" or "*Female*" in every case.

11. *Column* 5.—In this column, the number of years of age completed last birthday should be entered in figure. In the case of infants under one year of age, enter the age in months in figure, but writing the word "Months" after the figure. If any person is unable to state his or her age precisely, do not leave column 5 blank, but fill it up with as much accuracy as you can from your own observation if the person is before you, or after enquiry from the other inmates of the house. You are forbidden to ask to see any female who is not voluntarily produced before you.

12. *Column* 6.—Here enter the main religious denominations to which each person belongs, *viz.*, Hindu, Muhammadan, Christian, Sikh, Brahmo, Jain, Buddhist, Jew, Parsi. If a person belongs to some aboriginal or non-Hindu tribe, or other class not included in any of the above divisions, enter the name of his tribe.

13. *Column* 7.—In this column, the caste and the religious sect of the individual should be entered by the names by which they are locally known. General classifications of caste, such as Brahmans, Sudras, &c., will not be sufficient. The particular sub-division of the caste and sect to which the person belongs should be entered; such as among Brahmans, Badagamadu Karnataka, Bobbur Kamme, Velnad, Murkinad, Vadama, Bruhaccharana, Hebbar, &c.: among Sudras, Gangadikar Vakkaliga, Namadhari Vakkaliga, Kunchiga, Halu Kuruba, &c.: among outcasts, Holaya, Madiga: amongst Muhammadans, Sayad, Shekh, Pathan, Moghal, Memon, Mapla, Labbe, Pindari, Kandahari; and as regards sects, Sunni, Shiya, Wahabi or Daira: and amongst Christians, Europeans, Eurasians and Native Christians, with the particular Church to which they belong.

14. *Column* 8.—"Mother-tongue" means the language ordinarily spoken in the household of each person's parents, whether or no it be that of the locality in which he or she is residing at the time of the Census.

15. *Column* 9.—Here enter the name of the District and the Province in which the person was born. For those born within the Mysore Province, the name of the Province may be omitted and the District alone need be entered. If the person was born out of India, the country will be named; no further detail is needed.

16. *Column* 10.—The occupation of every male of the age of 15 and upwards, or the source from which he chiefly derives his income, should be shown in this column. If he has several occupations, that one should be entered from which his income is chiefly derived. But if he combines agriculture with any other profession or trade, such as that of a Government servant, vakil, or money lender, carpenter or smith, both occupations should be shown. Caste should not be misentered for occupation. The occupation of a smith, potter or fisherman by caste who lives by agriculture should be entered as agriculture, and not as smithery, pottery or fishing.

All use subject to https://about.jstor.org/terms

Persons engaged in agriculture should be distinguished into (1) *Non-cultivating land-holders* (*i. e.* persons owning or occupying land but not carrying on or superintending the cultivation themselves); (2) *Cultivating land-holders* (*i. e.* owners or occupants of land engaged in cultivation); (3) *Farmers* (*i. e.* cultivators of land for money or grain rent, but not possessing any right in the land); (4) *Agricultural servants*, (*i. e.* laborers employed on wages all the year round for ploughing or other field work or for tending cattle); and (5) *Day laborers* occasionally employed on wages for harvest or other special work connected with agriculture.

With regard to other occupations, the particular service, trade or handicraft carried on by the individual should be specified in the Vernacular term by which it is commonly known. General terms, such as servant workman, shop-keeper, trader, &c., will not be sufficient.

Persons who live by begging should be entered as "mendicants"; and persons who live by the wages of labor other than agricultural should be entered as "general laborers". When persons are temporarily unemployed, their last or ordinary occupation should be entered against them.

If subordinate male members of the family earn their livelihood by a separate occupation, such occupation will of course be entered against them. If they follow the occupation of the head of the family and take an active part in it, the same occupation should be shown against them. If they are not actively employed in any occupation and simply depend on the head of the family, they will be entered as having "No occupation."

Where women earn a living by a special occupation or are actively employed in the occupation of their husbands or the heads of the families, the respective occupation should be entered against them. If they have no such occupation or are chiefly employed in domestic work, such as looking after the house and children, cooking, &c., no entry should be made against them in this column.

Similarly this column should be left blank in the case of children and boys and girls under 15 years of age, unless they are engaged in any occupation, in which case such occupation should be entered against them. Boys and girls at school are not to be regarded as following any occupation.

17. *Column* 11.—Enter those able to read or write as "*Knows*;" not able to read or write as "*Does not know*;" and still under instruction whether at school or at home as "*Learning*." Persons who can merely sign their names, but are not able to read or write, should be noted as "*Does not know*."

18. *Column* 12.—Enter as "*Lepers*" only those who are afflicted with the true or eating leprosy. Enter as "Deaf-mutes" only those who have been both deaf and dumb from birth. Enter as "Blind" only those who are blind of both eyes.

B.—What has to be done at the Final Census on the 17th February 1881.

19. On the night of the 17th February 1881, beginning at 9 P. M. you will take the Schedule Book filled in already as above, and visit every house in your Block in order and compare the people living in it with the entries already made in the Schedule Book.

20. If any persons entered by you in the Schedule have since died, or have left the house, or are absent on journeys, you will score out their names by running a line across.

21. If any persons have newly arrived or been born in the house, and are at the time of your visit living in or taking their meals from it, whether at that moment actually in the house or out of doors on business within the village, you will enter their names with all the particulars required in the several columns at the end of the Schedule for that house.

22. When you have done with all the houses in your Block, you will proceed to count the travellers, pilgrims and others in chatrams and similar places left out in the Preliminary Record, and also those resting in encamping grounds, or who may be passing on the roads within your block, and enter them in the Schedule Book at the end, under the head "Travellers," with all the particulars required for each of them in the several columns. For these persons there will be no house number, and no number in column 1.

23. You are to understand that the Schedule Book as revised at the Final Census should contain all the people, residents as well as outsiders, as actually found living within your block at the time.

24. You should initial all the alterations and corrections made by you in the Schedule Book.

25. You are not to persist in inquiring the name of any female if there is any objection to giving it, or to ask any information not required for the purposes of the Census, as, for instance, the amount of any person's income; but all persons are bound to give you such information as will enable you to fill up the Schedule Book. Any Enumerator detected in extorting money on any pretext connected with the Census renders himself liable to be punished under the Penal Code.

13	Visitor. Ramayya	Married	Do	48	Hindu	Brahman, Bobburkamme.	Kanarese	Bombay, Dharwar.	Mendicant.	Does not know.	Deaf-mute.

Railways.—On the 21st October the special arrangements for taking the Census in connection with Railways had been announced as follows :—

The Government of India have decided that the Census at the Railway stations and on the Railway lines and premises should be taken by the Railway authorities, who will nominate the Enumerators and make other necessary arrangements on the subject.

The population to be enumerated by the Railway authorities will comprise :—

I. Railway employés, their families and servants, residents on the Railway premises.

II. Laborers and others employed on Railway work living for the time within the Railway premises, *i. e.* taking meals or sleeping within them.

III. Passengers travelling by rail on the night of the Census, including Railway employés, &c., so travelling.

But Railway employés, servants or laborers who work on the line only during the day or sleep there on night duty, but having their residences outside the Railway premises, will not be regarded as part of the Railway population to be enumerated by the Railway authorities, but will be enumerated at their places of residence by the Enumerators appointed for the same.

The Preliminary Record of the population in the schedules directed in the Instructions need be made only as regards Class I of the Railway population. The enumeration of Classes II and III, as well as the revision of the entries as regards Class I, should take place on the night of the Final Census, and should be made in accordance with the instructions laid down.

With regard to the enumeration of Class III, or travellers by the Railway, the following special rules are laid down by the Government of India.

This content downloaded from 171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

A. The enumeration will take place on the night of the Final Census between 9 P. M. and 6 A. M. the next day. The passengers will be enumerated at the stations where they alight, and after their names and other particulars have been entered in the schedule forms, they should be furnished each with a check-ticket showing that he has been included in the returns, and which he should be told to produce if any one tries to count him again on his leaving the station. If more than one train runs on the line between the hours mentioned, the passengers by each train arriving at each station should be enumerated and scheduled as above. Any passengers who, having arrived at the station before 9 P. M., stay or sleep in the station for the night, should also be included in the enumeration.

B. Passengers who do not alight before 6 A. M. will be counted in the train at the first considerable station at which the train stops at that hour. A place should be chosen where the train is timed to stop for a sufficient period, which might, if necessary, be slightly prolonged. In the case of passengers of this description, no check-tickets would be necessary, as after the counting at 6 A. M. all further enumeration will cease.

C. To avoid counting again persons who have already been counted in their own homes before they got into the train, it will be necessary to enquire of every passenger whose ticket shows that he got in to the train after 10 P. M. whether he has already been counted. If he says he has, the answer may be accepted; if he says he has not, he should be entered in the return.

When the schedules both for the residents on the Railway premises and passengers are complete, they should be made over to the District Officer concerned, who will include them in the Census returns of the village or town in which the Railway station where the enumeration was made is situated. The schedules of passengers in the train, prepared under rule B, not belonging to any particular station, will be added to the returns of the whole District.

Instructions as to Supervisors.—The following additional instructions were subsequently issued regarding the formation of Supervisors' Circles and the appointment of Supervisors.

The Supervisors should have their Circles definitely fixed, and with the respective Shanbhogs they should go to all the villages in their Circles and verify all the entries made in the Preliminary Record and not examine merely a percentage of such entries. It is observed that non-officials, and in some cases Shanbhogs, are appointed Supervisors. It is necessary that the Supervisors should, as far as practicable, be responsible officials. The Deputy Commissioners should report whether, in the cases in which other than Government officials have been appointed as Supervisors as above, they satisfied themselves in regard to their ability and trustworthiness for the responsible discharge of the work.

The Assistant Commissioners appointed should get together the Amildars and the Taluq officials, with the Supervisors and Enumerators, at one or more centres in each Taluq and thoroughly instruct them in the mode of filling up the schedule both at the Preliminary Record and at the Final Census, getting them to fill up a few returns in their presence and questioning them in regard to the manner in which the entries are to be made in the several columns. The Assistant Commissioners should report how they have carried out these instructions.

In modification of previous orders, the Chief Commissioner considers it undesirable that the Preliminary schedules prepared by the Enumerators and examined by the Supervisors should be forwarded to the District Office. They will be better examined in the respective Taluq Cutcherries, under the immediate orders of the Amildars, by select Taluq Gumastas who should be specially nominated and instructed for the work. The schedules should be sent back through the Supervisors to the respective Enumerators by the 1st of February next, and the acknowledgment of the Enumerators for their receipt should be obtained and recorded in the Taluq office.

The Amildars will be held responsible for the accurate and successful completion of the work in their respective Taluqs. They should not only visit every village and see that all the arrangements have been properly made, and that the Supervisors and Enumerators appointed are ready at their posts and do not absent themselves without permission, but they should also, with the assistance of any other Taluq officers available, personally examine and verify the Preliminary Record in some of the villages in each Circle. They should afterwards again visit the villages and see that all the arrangements for the Final Census are properly made, and should with the aid of other Taluq officers, inspect and personally superintend the Final Enumeration in as many important villages as practicable. The schedules, when received in the Taluq Cutcherries after the Final Census, should be forwarded to the District Office for final examination and tabulation.

A sufficient supply of the schedule forms, with a margin against any accidents, should be indented for and obtained, and made into books, and furnished to the Enumerators; and there should also be placed in each Taluq a sufficient supply of spare schedule forms for the purpose of being added to the schedule books, when, after the Preliminary Record, they are found not to contain sufficient number of spare pages for additional entries at the Final Census.

It will be seen that the record is to be made by the Enumerators themselves, except in the cases of Military Barracks, Jails, Hospitals and Boarding Schools, and the Railway Lines and Stations, for which the schedules may be filled in by the respective authorities. The necessary arrangements should be made on the subject by the respective Deputy Commissioners. The caution enjoined against any remissness in the enumeration of outcasts and for the enquiring of travellers, when enumerating them at the Final Census, as to whether they have been elsewhere enumeratedon the same night, should be carefully attended to.

The Judicial Commissioner will be asked to issue instructions to all the Judicial Officers and Magistrates not to issue any summons requiring the attendance of Enumerators, Supervisors and the Taluq officers engaged in the Census work during the time they are so employed.

Further Instructions to Enumerators.—The following additional instructions were further issued for the guidance of the Enumerators, explaining the course to be pursued in certain cases and throwing further light upon points that were not understood with sufficient clearness.

In filling up the Schedule Forms the Enumerators should write in straight parallel lines, getting the forms ruled if practicable.

In column 7 of the Schedule, Christians should be distinguished, as regards caste, into Europeans, Eurasians and Native Christians; and, as regards sect, into Church of England, Roman Catholics, Presbyterians, Baptists, Wesleyans, Armenians, Greeks, Syrians, and Others.

In the case of immigrants employed in the Coffee and Malnad districts, the Enumerators should enter in addition to the District, the taluq and village to which they belong.

Females and other subordinate members of a cultivator's family taking an active part in the cultivation should not be entered as "Cultivating land holders" or "Farmers" unless they hold or farm lands separately. They should be entered under a separate head of "Subordinate cultivators." If they work for wages they will be shown under the head of "Agricultural servants" or "Day laborers" as the case may be.

Eunuchs are to be entered as "Males," and prostitutes as "unmarried," but if they return themselves as married no further question is to be asked about it.

Column 11 should not be left blank for infants and young children not yet under instruction. They should be entered as "does not know."

It must be carefully borne in mind that the leprosy requiring to be entered in column 12 is the eating leprosy. This and the other diseases requiring to be noted in this column being readily ascertainable, the Enumerators should not make any annoying enquiry on the subject.

The point in regard to which perfect accuracy is not attainable is the age. This information is however very important for statistical purposes. The Deputy Commissioners should at once arrange for the Preliminary returns of a number of large villages in the several taluks being examined and verified throughout by responsible officers in regard to the column of age, and the villages in question and the officers by whom they were so examined should eventually be reported to this office. There may be some difficulty in ascertaining the exact age of adults amongst the rural classes, who keep no record of their birth, but the ages of children can with facility be precisely ascertained. The Chief Commissioner trusts that a correct record, on this point may be secured in the villages specially examined as above.

Special arrangements for the Final Census.—Directions were also issued as follows in regard to the hour at which the work should commence in rural villages, and the mode in which people on the move or in forests should be brought into the account.

In view to obviate the difficulty attendant on the taking of the Final Census at a late hour of the night in rural villages, the Census Commissioner has authorized the commencement of the enumeration at 6 P. M. or such time after sunset by which the villagers may be expected to have returned to their homes from the fields. In the larger towns, however, and in the villages near Railway Stations, the Census should commence at the hour originally fixed, *viz.*, 9 P. M.

Notice should be given warning the people to be up and awake on the night of the Final Census and to have lights and fires burning till the Enumerator comes round.

At the places where fairs and festivals may take place on the 17th February, it should be arranged that visitors who do not leave the place before sunset or 6 P. M. should remain there for the night, till they are enumerated. Similarly, carts and travellers should be told not to start on their journeys during the night till they are censused. In enumerating such travellers and floating population care should be taken to ascertain that they have not been censused elsewhere on the same night.

With regard to the wild tribes living in the jungles, and herdsmen with the Amrut Mahal and other cattle who may be out in the kavals, and the Idigars or toddy-drawers who may live out in the toddy groves, arrangements should be made for securing their attendance in the villages on the night of Census; and where this cannot be done, they may be enumerated in their jungle residences early on the morning of the 18th February.

Municipal Instructions.—Certain precautions were needed in the case of Bangalore and Mysore to guard against the double enumeration of servants, which were provided in the following instructions.

The Municipal President at Bangalore and the Vice-President at Mysore are requested to draw the special attention of the Enumerators and Supervisors to the instructions which provide for the enumeration at their own houses of persons absent on duty but within the limits of the village or town. Under these rules, servants not living with their masters, but simply sleeping in their houses on the night of the Census, will not be enumerated in their masters houses, but will be treated as being present in their own houses, in accordance with the entry made in the Preliminary Record. Special care will be required on the part of the Enumerators in this matter, as residents of one Block are likely to be sleeping

All use subject to https://about.jstor.org/terms

in the houses of their masters situated in another Block. The Enumerators in the latter should exclude such persons from their enumeration, after ascertaining from them that they have been enumerated in their own houses in the Preliminary Record while the Enumerators of the Block in which the permanent residences of such persons are situated, should treat them as being present in their houses, after ascertaining that they are absent on duty within the town. To record such persons where they are actually found would necessitate considerable alterations of the Preliminary Record.

Census Officers.—Such were the clear and full instructions issued to ensure accuracy in the Census returns. For the carrying of them out, the following were the Officers responsible:—

District.	Deputy Commissioner.	Assistant Commissioner in charge of Census.	Date of submitting Census Report.
Bangalore	Mr. L. Ricketts	Mr. Saiyid Nasr-ud-Din	14 October 1881
Kolar	„ B. Krishnaiyangar, C. S. I.	„ C. Subba Rao	25 do „
Tumkur	„ K. Sheshadri Iyer, B.A., B.L.	„ B. K. Venkatvaradaiyangar	28 September „
Mysore	Lieut.-Col. C. J. Pearse	„ P. N. Purnaiya, B.A.	10 July 1883.
Hassan	Mr. P. N. Krishna Murti, B.L.	„ C. Madaiya	19 October 1881.
Shimoga	„ V. N. Narasimhaiyangar	„ B. G. Krishnaiyangar	14 September „
Kadur	„ G. F. Meiklejohn	„ D. Appu Rao	20 August „
Chitaldroog	„ Abdul Khadar, Khan Bahadur	„ B. Krishnaiyangar	10 October „

Preliminary Record.—The preparation of the Preliminary Record began on the 3rd of January, and was completed in two or three days in the rural villages, but in many cases occupied a week in the towns. The details entered in the forms were carefully checked in as many parts of the District as possible by the supervising officers in person, and any errors in the register or in the method corrected on the spot.

Final Census.—All these preparatory measures being well matured and put into operation in every part of the country, the eventful date of the Final Census, the night of full moon on the 17th of February, found every one at his post, well informed of the duties to be performed, and the whole population awaiting in an attitude of readiness and willing co-operation the rounds of the Enumerators and other officials already become familiar by their previous visits. All public offices and courts were closed on the 17th and 18th to allow of the Census work being uninterrupted. Generally, no rumours adverse to the work in hand had been spread, creating alarm among the ignorant or disquieting the minds of the people. On the contrary, as one Assistant Commissioner naively remarks, "The ryots and the people who were even living far from the Taluq head quarters and in out-of-the-way villages were perfectly aware that the Census operations would do no harm whatever, and that they were pleasant and innocent undertakings on the part of the Government." But in the Kolar District there appears to have been some idea abroad that the object of the Census was a desire on the part of Government to increase taxation and enforce emigration. In Kadur District two large jatras took place on the day of the Census, one at Sringeri and other at Moguuda, but the special arrangements made for these enabled the Census to be taken without difficulty. The Shibi jatra in Tumkur District was also carefully provided for. On the other hand, a large festival at Govinkovi in the Shimoga District, which would have fallen on the day of the Census, was postponed by the chief priest, who issued a notice to that effect for the information of the votaries likely to attend. Whether the motive was to assist the Government or to avert any anticipated evils does not appear. It is however a strange coincidence, and perhaps nothing more than a coincidence, that this superstition in Honnali Taluq, and that above referred to in Kolar District, should have both arisen in just the two neighbourhoods where European miners have recently been engaged in the search for gold. The Deputy Commissioners of Bangalore, Kolar, Tumkur, Kadur and Chitaldroog express perfect confidence in the accuracy of the Census in their respective Districts. In Hassan and Shimoga Districts a few discrepancies were detected, which were rectified. From Mysore no statement on the subject has been received.

Blocks and Circles.—It appears that in the Bangalore District 2,412 officials and 356 non-officials were appointed as Enumerators, the former being principally Shanbhogs. There were thus 2,768 Enumerators' Blocks these were distributed among 319 Supervisors' Circles, the Supervisors being officials of a higher grade—Educational, Police and Taluq. In Towns, Municipal members and some non-officials acted as Supervisors.

This content downloaded from

All use subject to https://about.jstor.org/terms

In Kolar District there were 2,571 Enumerators' Blocks and 350 Supervisors' Circles but as some of the blocks were too small and contiguous, they were united under one Enumerator; thus only 1,734 Enumerators were employed. These were for the most part selected from among private persons who were related to Shanbhogs or Patels, with other intelligent tradesmen and ryots. The Supervisors were mostly responsible officials.

For Tumkur District 1,178 Enumerators' Blocks and 222 Supervisors' Circles were formed. But in Koratagiri there were 2 Enumerators with 2 blocks each, and in Sira, on the other hand, there were 2 blocks which each had 2 Enumerators. Moreover the 30 blocks apportioned to the Shibi jatre had two Enumerators each, and were supervised by the Assistant Commissioner. Hence 1,208 Enumerators and 222 Supervisors were employed. The former were chiefly Shanbhogs, the latter were the more responsible District and Taluq officials, School masters and Police officers. One complaint was brought against an Enumerator (a village official) of having made the census a pretext for extortion, but the case fell through at the trial, though sufficient ground appeared for awarding him departmental punishment.

In Mysore District there were 2,424 Enumerators' Blocks and 433 Supervisors' Circles. In addition to officials, many private persons who could read and write Kannada were employed in the work.

In Hassan District 1,664 Enumerators had charge of 1688 Blocks, which were formed into 235 Circles, each under a Supervisor. The difference between the number of Enumerators and their Blocks was owing to 2 Blocks being put under one Enumerator where they were small, which was the case with 25. On the other hand, 5 large Blocks had 2 Enumerators each. One Enumerator fell ill and his duty was performed by his Supervisor.

In Shimoga District there were Enumerators and Supervisors, corresponding with the number of Blocks and Circles respectively.

The Kadur District was distributed among 1,902 Enumerators' Blocks and 193 Supervisors' Circles. The Enumerators were selected from Shanbhogs, Patels, Hobli School masters, and educated merchants and ryots. The Supervisors were principally officials, the non-officials being lawyers and Municipal members. European coffee planters undertook the whole work for their respective estates.

Chitaldroog District was divided into 1,098 Enumerators' Blocks and 154 Supervisors' Circles. As a rule there were 2 Enumerators to each block, hence 2,196 Enumerators were employed, the number of Supervisors being 155. A reserve of 190 Enumerators and 23 Supervisors was further kept in readiness to meet contingencies and fill up casualties.

Tabulation.—The Final Census having thus been completed, the Tabulation of the results had next to be carried out; and on the 8th of May 1881 the following instructions, with revised forms of Village Tables, were laid down for the purpose.

Table No. 1 as now revised shows the village population classified according to Age, Religion and Civil condition. The details of Education under three periods of age and under the respective heads of Religion are also to be shown at the foot of the statement, as provided for in the form. The statement will be ordinarily comprised in the first page of the sheet, which contains separate heads for the four classes of Hindus and for Muhammadans.

Jains, who in this Province form an integral part of the Hindu population, will be conveniently included under the 2nd division of Hindus. The various castes to be included under each of the 4 divisions of Hindus are shown in the accompanying List of Castes, A.

Where Christian population occurs in towns or special villages, the statement will be *continued on* for them on the 1st half of the 2nd page, where a further head of "Others" is also provided for persons not included in the above, *viz.* Parsis, Jews, Sikhs and Buddhists.

On the remaining half of the 2nd page, Tables Nos. 2, 3 and 4 are provided, for Language, Birth-place and Infirmities. Tables 2 and 3 require no explanation. In Table 3 two additional columns are opened to show the number of people speaking the different languages who are born within the Province and who are born outside.

In Table No. 4, Infirmities are required to be shown separately for the different religions and for each quinquennial period of age, *viz.*, up to 4, 5 to 9, 10 to 14, 15 to 19 and so forth; but as the cases of infirmities will be rare, it is not necessary to fill in the statement with all the religions and all the quinquennial periods of age. The religions and the quinquennial periods of age in which the infirmities actually occur in the village need alone be entered.

In Table No. 5, the population, male and female, under each caste and sect as per List A, is to be shown An additional column is opened to show the number of persons under each caste who are recorded in the schedules as *owning* lands, whether they be non-cultivating land-holders or cultivating land-holders.

Brahmans are to be classified under the different sects of Smarta, Mádhva, and Srivaishnava; but no distinctions of sect are to be entered for the other castes of Hindus. Jains will be entered as a separate caste under the second division of Hindus or that of superior castes other than Brahmans. Muhammadans, Christians and others are to be classified as shown in List A, for reasons explained in previous memorandum.

The castes amongst Brahmans are numerous, as per separate List B accompanying; but as in the general returns the Brahmans will be classified simply into the three sects of Smarta, Mádhva and Srivaishnava, further details of caste are useful merely to show the prevailing tribes of Brahmans in each village. It will therefore suffice to show separately the principal tribes prevailing in the village under the respective sects to which they belong, grouping the rest of the Brahmans under each sect under the head "Others."

With regard to the other classes, the various castes shown in the list are important, and it will be desirable to know the total population of the Province under each. It is therefore necessary that the number of the population in the village under each of the castes should be entered, and that where the entries of castes in the schedules do not exactly correspond with the list, the persons should be entered under the particular caste in the list to which they are nearest allied.

In order to show the various churches for the Christian population, a separate Table 5 A is furnished. This need be prepared only for large places where a Christian population belonging to different churches prevails. Where the Native Christian population ordinarily occuring in villages are, as is generally the case, entirely Roman Catholics, it will be sufficient to designate them as Roman Catholics in Table No. 5, and the separate Table 5 A will not be required for such cases.

The 4th page of the sheet contains Table No. 6 showing the occupations under the several heads of religion for ages under and above 15 years, first for males and afterwards for females. This statement, where the space is not found sufficient, may be continued on separate pages, for which spare printed sheets will be supplied. But ordinarily the population details of a single village will be brought into the 6 tables on a single sheet of four pages.

To correspond with the English Tables, the occupations should be classified under the * 6 Classes and under the Orders and Sub-orders shown in the accompanying List C. As several of these orders and sub-orders are not likely to occur in the rural villages ordinarily, they are not printed in the table, and the Tabulator is expected to enter in detail the occupations actually occuring in the village, arranging them under the Class, Order and Sub-order to which they belong.

* Class I. Professional Class.
" II. Domestic Class.
" III. Commercial Class.
" IV. Agricultural Class.
" V. Industrial Class.
" VI. Indefinite and Non-productive Class.

The agricultural population should be carefully arranged under the 6 Sub-orders shown under Order No. 8, Class IV. The directions given in the latter part of clause 1, para 16 of the Enumerators' Instructions for entering for persons combining agriculture with other occupations both the occupations, need not be carried into the Tabulation. Such persons should be classed only under the occupation which forms the chief source of their income. The difference between the number of land-holders entered in Table No. 5 and that shown in Table No. 6 would represent the number of persons living by other occupations who own lands.

The classification under Class VI should also be strictly adhered to.

With regard to the Government servants, it is believed that the Enumerators have generally entered them simply as such, without specifying the branch of the Government service to which they belong. The Government servants will have therefore to be entered under a single head in Table 6 without any subdivisions; but with regard to the Commercial and Industrial classes, the general Order and Sub-order shown in the list will not suffice. The particular trades and occupations followed as entered in the schedules should be specified in the Village Tables under each Sub-order.

The above 6 Tables contain all the information required for the Final Return prescribed by the Census Commissioner, and a great deal more which will be of considerable value for local purposes. Two copies of these Tables will be filled in for each village, one in English and the other in Canarese, the former to be sent to this Office and the latter to be retained in the District.

With regard to the mode of compiling these Village Tables from the schedules, it is found that a separate Working Register will be required for Table No. 1; but objections are raised to the system of noting in this register each entry by a tick, as the errors which are very apt to occur cannot be detected except by going over the whole process again. It is therefore preferred to note the entries under the several heads for each schedule of the village separately, and then total the results for the village, as this will facilitate re-examination and correction. A supply of this Working Register Form is forwarded. A separate form can be used for each head of Religion in large villages; but where the population is small, several religions may be entered one after another on the same form, providing sufficient space for each. The form contains the several heads of Civil Condition and Age. The number of each schedule or house being entered across at the head, the totals of the entries for that schedule are to be entered under the respective heads and for each age occurring in the schedule, then to be followed similarly by the totals of the next schedule belonging to the same head of religion. Where the persons in a schedule belong to different religions, as the master and servant in a house are likely to be, the portions appertaining to each religion are to be entered in the Working Register for that religion.

The above Working Register can be utilized to show also the statistics of education by noting by the side of each figure the letter "L" (or "ಕ" "in Canarese) for "Learning," "K" (or "ಲ" in Canarese) for "Knows," and "N" (or "ಇ" in Canarese) for "Does not know."

This content downloaded from

All use subject to https://about.jstor.org/terms

A Working Register for Table No. 6 may also be required, and printed forms for the same are forwarded, to be filled up separately for males and females. These forms provide headings only for the various subdivisions of the Hindu religion, and a separate blank head for Muhammadans or any other religion occurring in the village, and they will be found sufficient in most cases. Where there are more religions to be entered in any large village or town, an additional form for the same may be used. Forms with blank headings are supplied for the purpose.

This Working Register for Table No. 6 may be filled in on the ticking system, as it is not so complicated as Table No. 1.

The remaining Village Tables, which are simple, may be filled up directly from the schedules by totalling the entries with the aid of a slate or otherwise.

When the Village Tables are completed and examined, and it is hoped they may be not later than the middle of July, the results should be totalled up in exactly similar tables first for the Taluq and then for the District. Working forms for this purpose will be hereafter furnished.

The Assistant Commissioners in charge of Census work should report from time to time how they are proceeding with the work, and in what manner they examine and verify the entries. They should also, as they examine the tables for each village, prepare a memorandum noting any peculiar features which they may find deserving of attention in the details of the population of the village.

Appendix A

List of Castes to be adopted in the Tabulation.

I. Hindus.

1. Brahmans.

Smarta. Madhva. Srivaishnava.

Principal prevailing castes in the village to be specified.

Others.

2 Kshatriyas, Vaishyas, including other Superior Miscellaneous Castes.

1. Arasu or Rajbinde.
1. Jaina.

Trading class.
1. Komati
2. Nagarta.

Miscellaneous.
1. Satani.
2. Dasari.
3. Bhairagi.
4. Rajputs.
5. Mahrattas.
6. Coorgs.
7. Rachevar.
8. Jetti.
9. Chitragara.
10. Bhattaraju.

Miscellaneous.
11. Saligeya.
12. Rangare.
13. Gosayi.
14. Gujarati.
15. Maravadi.
16. Multani.
17. Ladar.
18. Mudaliar and Pille.
19. Naidu.
20. Malayali.

3. Sudras.

Lingayats.
1. Aradhya.
2. Ayya.
3. Sivachar Gauda.
4. Sivachar Banajiga and other trading class.
5. Sivachar Gaulıga.
6. Other Sivachars.

Agricultural Class.
1. Gangadikar Vakkaliga.
2. Nonaba Vakkaliga.
3. Morasa Vakkaliga.
4. Halu Vakkaliga.
5. Sadar Vakkaliga.
6. Other Vakkaliga.
7. Kunchiga.
8. Namdhari or Malava.
9. Reddi.
10. Kammavar.
11. Halu Kuruba.
12. Hande Kuruba.
13. Kambali Kuruba.
14. Uppar.
15. Tigala.
16. Uru Golla.
17. Kadu Golla

Agricultural Class.
18. Kallu Vadda.
19. Mannu Vadda.
20. Béda.
21. Besta.
22. Toreya
23. Telugu Banajiga and Dasa Banajiga.
24. Idiga.
25. Halepaika or Bilva.

Artisans.
1. Panchala.
2. Devanga.
3. Togata.
4. Patvegara.
5. Padmasále.
6. Jáda.
7. Jamkanadava.
8. Kumbara.
9. Agasa.
10. Goniga.
11. Darji.
12. Hajam.
13. Gániga.
14. Myada.

Appendix C.

List of Occupations to be adopted in the Tabulation.

1. The Classes, Orders and Sub-orders in the subjoined list of Occupations generally correspond with the English list, except under Class IV, in which a different arrangement suited to the requirements of the country had to be adopted.

2. Class I, Order 3, Sub-order 5, might, to some extent, occupy the same ground as similar occupations under the Industrial Class. But a distinction could be well maintained if the former were restricted to artists of the learned class.

3. In the various Sub-orders of Order No. 3, as well as under most other heads, provision is made for showing separately the superior men who represent the respective occupations from the subordinate menial establishments employed in connection with their occupations, there being no other place for the latter in the list.

4. There is also some mixing up of the retail tradesmen in Sub-order 2 of Order No. 6 with the dealers included under the various heads of the Industrial occupations, but mistake in this respect will be avoided by taking care to restrict the latter to those who work and deal in the articles made by themselves, as distinct from tradesmen selling articles made by others.

Class I. Professional Class.

Order I. His Highness the Maha Raja and Members of the Royal family.

Order IA. Government Servants.

Sub-order (1.) His Highness' Court and Palace or Household Establishments.

„ (2.) Establishments connected with the Civil Administration of the Province in all Departments; Revenue, Judicial, Police, Public Works, Forest, Jails, Post, Medical, Educational, Arts and Science, &c., and General Administration and Municipal, Local Fund, Muzrayi and Village establishments.

Order 2. Military.

Sub-order (1.) Army.

„ (2.) Navy.

Order 3. Learned Professions, *not included under Government Servants.*

Sub-order (1.) Clerical or Religious Establishments.
a. Superior men representing the occupation.
b. Their subordinate menial establishments.

„ (2.) Lawyers.
a and *b* as above.

„ (3.) Physicians, Surgeons, Midwives, Chemists and other Medical men.
a and *b* as above.

„ (4.) Authors and Literary persons, including Newspaper Editors, Reporters, &c.
a and *b* as above.

„ (5.) Artists of the learned class, such as Painters, Sculptors, Engravers, Photographers, &c.
a and *b* as above.

„ (6.) Musicians.

„ (7.) Actors, Exhibitors and Performers of all kinds, comprising Dramatic Players, Conjurors, Pugilists, &c.
a and *b* as above.

„ (8.) Teachers.
a and *b* as above.

„ (9.) Scientific persons of all kinds.
a and *b* as above.

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

Class II. Domestic Class.

ORDER 4. Wives not classed under particular occupations, included only in the English Returns, but to be left out here.

ORDER 5. Persons engaged in entertaining and performing personal offices for man.

Sub-order (1.) Engaged in boarding and lodging, including Keepers of Hotels, Club-houses, Refreshment-rooms, Poor-houses, Chatrams, Hospitals, Charitable Institutions, and Public-rooms intended for personal convenience, comfort and service. Barbers and Washermen not borne on domestic establishments will properly be included under this head.

a. Superior men representing the respective occupations.
b. Their subordinate menial establishments.

„ (2.) Domestic servants, comprising attendants, and all kinds of domestic servants, including coachmen, grooms, gardeners, &c.

lass III. Commercial Class.

ORDER 6. Persons who trade in money, houses or goods of various kinds (live-stock not included).

Sub-order (1.) Mercantile men, comprising lenders of money, dealers in money and bills, bankers and persons engaged in similar mercantile institutions; wholesale or general dealers in goods, including brokers, agents and auctioneers.

a. Superior men representing the respective occupations.
b. Their subordinate menial establishments.

„ (2.) Other general dealers, comprising shop-keepers and retail tradesmen of various kinds.
a and *b* as above.

ORDER 7. Carriers of men, animals, goods and messages, comprising Railway, Telegraph and Navigation establishments (not being Government servants), as well as ordinary cartmen, boatmen, ferry men, &c., and also persons engaged in storage, such as warehouse-keepers, &c
a and *b* as above.

Class IV. Agricultural Class.

ORDER 8. Agriculturists proper, connected with lands, gardens, plantations and forests.

Sub-order (1.) Non-cultivating land-holders.

„ (2.) Cultivating land-holders.

„ (3.) Farmers.

„ (4.) Subordinate cultivators, comprising subordinate members of the families of land-holders and cultivators engaged in cultivation jointly with them.

„ (5.) Agricultural servants or laborers employed on wages by the year or for long periods for cultivation or for tending cattle.

„ (6.) Agricultural day-laborers employed for occasional work.

ORDER 9. ersons engaged about animals, comprising the proprietors, breeders, keepers, trainers, and dealers of horses, cattle, sheep, pigs, birds, and fishes, and animals of all kinds, not forming a part of the occupation of an agriculturist proper under Order 8.

a. Superior men representing the respective occupations.
b. Their subordinate menial establishments.

Class V. Industrial Class.

Order 10. Persons engaged in art and mechanic productions.

Sub-order (1.) Workers in books, comprising book-sellers, book-publishers, book-binders, printers, newspaper proprietors, publishers and establishments.

a. Superior men representing the respective occupations.
b. Their subordinate menial establishments.

" (2.) Workers, repairers and tuners of musical instruments, and articles forming part of them.
a and *b* as above.

" (3.) Workers in prints and pictures, and articles forming part of them.
a and *b* as above.

" (4.) Workers in carving and figures, and articles forming part of them.
a and *b* as above.

" (5.) Workers in tackles for sports and games, and articles forming part of them.
a and *b* as above.

" (6.) Workers in designs, medals and dies, and articles forming part of them.
a and *b* as above.

" (7.) Workers in watches and philosophical and scientific instruments, and articles forming part of them.
a and *b* as above.

" (8.) Workers in surgical instruments, and articles forming part of them.
a and *b* as above.

" (9.) Workers in arms and ammunition, and articles forming part of them.
a and *b* as above.

" (10.) Workers in machines and tools, and articles forming part of them.
a and *b* as above.

" (11.) Workers in carriages, and articles forming part of them.
a and *b* as above.

" (12.) Workers in harness, and articles forming part of them.
a and *b* as above.

" (13.) Workers in ships, and articles forming part of them.
a and *b* as above.

" (14.) Workers in houses and buildings.
a and *b* as above.

" (15.) Workers in furniture, and articles forming part of them.
a and *b* as above.

" (16.) Workers in chemicals, and articles forming part of them.
a and *b* as above.

Order 11. Persons working and dealing in textile fabrics and in dress.

Sub-order (1.) Workers in wool and worsted.
a and *b* as above.

" (2.) Workers in silk.
a and *b* as above.

" (3.) Workers in cotton and flax.
a and *b* as above.

" (4.) Workers in mixed materials.
a and *b* as above.

Sub-order (5.) Workers in dress, comprising tailors, shoe-makers, &c.
a and *b* as above.

" (6.) Workers in hemp and other fibrous materials, comprising makers of mats, canvas, gunny bags, ropes, fibres. nets, &c.
a and *b* as above.

Order 12. Persons working and dealing in food and drinks.

Sub-order (1.) Workers in animal-food, comprising cow-keepers, milk-sellers, butchers, poultry-sellers, fish-mongers, honey-collectors, &c.
a and *b* as above.

" (2.) Workers in vegetable food, comprising rice-preparers, sugar manufacturers, bakers, and fruit and vegetable sellers, and all other articles of food prepared from vegetable substances
a and *b* as above.

" (3.) Workers in drinks and stimulants, comprising brewers, wine, spirits and toddy distillers, and sellers, preparers and sellers of coffee, tea, spices, tobacco, cigars, snuff, flowers, perfumes, &c.
a and *b* as above.

Order 13. Persons working and dealing in Animal substances.

Sub-order (1.) Workers in grease, gut, bones, horn, ivory and whale-bone
a and *b* as above.

" (2.) Workers in skins, feathers and quills.
a and *b* as above

" (3.) Workers in hair.
a and *b* as above.

Order 14. Persons working and dealing in Vegetable substances.

Sub-order (1.) Workers in gums and resins.
a and *b* as above.

" (2.) Workers in wood.
a and *b* as above.

" (3.) Workers in bark.
a and *b* as above.

" (4.) Workers in cane, rush and straw, including basket-makers.
a and *b* as above.

" (5.) Workers in paper.
a and *b* as above.

Order 15. Persons working and dealing in Minerals.

Sub-order (1.) Miners.
a and *b* as above.

" (2.) Workers in coal.
a and *b* as above.

" (3.) Workers in stone and clay.
a and *b* as above.

" (4.) Workers in earthenware.
a and *b* as above.

" (5.) Workers in glass.
a and *b* as above.

" (6.) Workers in salt.
a and *b* as above.

" (7.) Workers in water, comprising well-sinkers, pond-makers, &c
a and *b* as above.

" (8.) Workers in gold, silver and precious stones, comprising gold-smiths, silver-smiths and jewellers.
a and *b* as above.

Sub-order (1.) Prisoners.

,, (2.) Mendicants, vagrants, and wandering men.

,, (3.) No occupation. *

N. B.—*This last Sub-order, under the instructions issued for filling in the column of occupation in the schedules, will comprise only males of 15 years and upwards.

Tabulation.—The work of tabulating and compiling the statistics obtained in the Census was carried out at the head-quarters of each District by a staff composed principally of officials from various Departments. The following are the details, so far as can be gathered from the District reports, regarding the period employed, the number of hands engaged in the task, and the daily rate of work turned out:—

District.	Date of commencement.	Date of ending.	Average No. of hands employed.	No. of working days.	Daily rate per head.
Bangalore	25 May	28 July	46	51	218
Kolar	25 April	7 September	54	123	173
Tumkur	...	...	44	126	74
Mysore	...	...	56	77	207
Hassan	14 May	27 August	34	90	175
Shimoga	17 ,,	10 ,,	50	73	137
Kadur	17 ,,	12 ,,	33	75	133

COST OF THE CENSUS.

Statement of Accounts.—According to a statement furnished by the Account Department, the total cost of the Census was Rs. 33,154. The following are the details :—

Enumeration.

Provincial Funds.—Pay of Assistant Commissioners specially appointed for Census work in Kadur and Chitaldroog	..	..	1,990	0 0
Travelling charges	..	..	966	2 0
Contingencies—Stationery and Printing	..	..	5,298	9 11
Purchase of tar, &c.	..	..	2,826	11 2
District Funds.— ..	..	..	1,383	6 11
Municipal Funds.—Bangalore Cantonment	..	..	1,873	14 8
Do Town	..	..	617	13 1
Mysore do	..	..	361	4 9
Minor Municipalities	..	..	394	0 8
Total Rs.		..	15,711	15 2

Compilation.

Provincial Funds.—Pay of Assistant Commissioners as above		..	4,225	0 0
Travelling charges	..	..	105	13 0
Allowances to establishment engaged on tabulation work	..	..	9,872	15 10
Stationery and printing	..	..	2,971	3 2
Municipal Funds.—Mysore Town	..	..	267	2 10
Total Rs.		..	17,442	2 10
Grand Total Rs.		..	33,154	2 0

Comparison with that of 1871.—The net cost of the Census of 1871 was Rs. 39,673; hence the amount expended on the Census of 1881 was Rs. 6,519 less. But, reckoned on the total population enumerated, the cost both times was almost exactly the same, or 1½ pie per head, with a minute fraction in favour of the former.

RESULTS OF THE CENSUS.

Orders as to the present Report.—In regard to the Report in hand, describing the results of the Census, the following specific instructions were received from the Government of India, under date the 2nd May 1882.

"In submitting the results of the Census operations of the year 1881 the statistical tables may be prefaced by a report containing information on the following points:—

(*a*).—Density of the population.

(*b*).—Movement of the population.

(*c*).—Distribution of the population,

(1) by sex,
(2) by age,
(3) by civil condition (if that has been noted in the enumeration),
(4) as urban or rural,
(5) by birth place,
(6) by language, nationality, or race,
(7) by caste or tribe,
(8) by occupation.

(*d*).—The causes contributing to the development of insanity, congenital blindness, deaf-mutism, or idiocy, according as these causes are found in the climate, the customs or the physical condition of the people, or are to be looked for elsewhere.

"In addition to the above information it would be convenient if the report were accompanied by a brief note of the physical condition and the climate of the country, and of such facts in its history as bear on the material progress of the people, especially past famines, the wage rates, and the productive power of the soil."

A review of the returns contained in the 20 Final Census forms upon which this Report is based will naturally include a notice of most of these topics. But it seems desirable to begin with the description of the physical condition and climate of the country, and the material facts in its history, before entering upon the statistics of the population.

PHYSICAL CONDITION OF THE COUNTRY.

Situation and Area.—The State of Mysore lies between 11°38′ and 15°2 north latitude, and 74°42′ and 78°36′ east longitude, and is of a triangular form, the apex being to the south, where the Eastern and Western Ghat ranges converge into the group of the Nilgiri hills. Its area* for the purposes of the late Census has been taken as 24,723 square miles, based upon the measurements of the Revenue Survey now in progress.† The greatest length north and south is about 230 miles, east and west about 290. One point on the north-west approaches within 10 miles of the sea, opposite the obscure port of Baydur, but in general the western boundary is from 30 to 50 miles from the coast: the eastern boundary is at its nearest point not less than 120 miles from the sea board. The western portion, resting upon the chains of the Western Ghats, is known as the Malnád or hill country: the remainder being called the Maidán or Bail Shímè, the plain country.

Communications.—Forming part of the plateau of the Deckan, the Mysore country is an elevated tableland resting upon the shoulders of mountain chains, which enclose it west, south and east, but are pierced at intervals by passes leading to the

*The area assigned to Mysore in official documents for some years previous was based upon calculations made by Colonel Green, the Chief Engineer, in 1856. According to that estimate the area was 27,004 square miles, exclusive of the Yelandur Jaghir, which extends over 73½ square miles. Hence a total area was arrived at of 27,077½ square miles, as given in the Census Report for 1871.

† The area actually surveyed is 15,773½ square miles: the unsurveyed portion of the Province is approximately estimated at 8,949½ miles, these latter figures being of course subject to alteration as the survey proceeds.

All use subject to https://about.jstor.org/terms

plains and the low country on either coast. Every part is intersected with good roads. In the east a railway on the broad gauge runs from Bangalore to Jalarpet on the Madras-Beypur line, and one on the metre gauge from Bangalore to Mysore in the south. A line on the latter gauge is also under construction from Bangalore westwards to Tiptur. Mysore, the dynastic capital, and Bangalore, the chief seat of Government, are the only places within the Province in telegraphic communication, except railway stations. But from Bangalore lines run through north to Bellary, and west *viâ* Mercara to Mangalore and Cannanore, without intermediate stations. Messages may be wired from Bangalore to all parts of India and the world.

Elevation.—Though described as a tableland, Mysore is far from presenting the even surface suggested by that name. On the contrary, it is everywhere undulating, much broken up by lines of rocky hills or lofty mountains, and scored on every hand by deep ravines. There is probably not a square mile in the whole superficies absolutely flat or level, the slope of the ground ranging from 10 to 20 feet per mile in the more level portions and as high as 60 and 80 feet elsewhere. The general elevation of the country rises from about 2,000 feet above sea level along the northern and southern frontiers to about 3,000 along the central watershed.

River systems.—This latter axial ridge separates the basin of the Kávéri to the south from that of the Krishna to the north, and divides the country into two nearly equal parts. The east has a separate river system of three streams—the Northern Pennár (or the Pennér), the Pálár, and the Southern Pennár (or the Poniár). None of the Mysore rivers is navigable, but they support, especially those on the south, an extensive system of irrigation by channels. These, drawn from immense dams called anicuts, of ancient construction, which stem the downward flow of the streams, run for a total length of more than 1,200 miles. Almost the only river running west is the Sharavati in the north-west, which hurls itself by a sheer descent of 900 feet down the Ghats in the magnificent falls of Gersoppa. The Kávéri in quitting the country also forms some notable and picturesque falls on either side of the island of Sivasamudram. In the north-east of the Province are found the spring heads called talpargis, which furnish an abundant and easy source of irrigation.

Tanks.—A marked feature of the water supply of the Mysore country is found in the tanks, which are artificial reservoirs from the size of a small pond up to that of extensive lakes, formed by throwing banks, called bunds, across the lower slopes of the valleys. The flow resulting from rain-fall is thus intercepted, and a store of water accumulated of greater or less depth and spread according to the capacity of the embankment. The waste-weir of a tank at a higher level feeds the next at a lower, and so on in a continuous series or chains of tanks at a few miles apart all down the course of the stream. To such an extent has this principle of storing water been carried, that much ingenuity would now be required to find a suitable site for a new tank without interfering with the supply of the existing ones. Though well distributed over the country, the tanks are most numerous in the central and eastern parts. The total number is reckoned at 37,682; the largest, the Sulekere, being 40 miles in circumference.

Geology.—The geological formation of the country belongs to the metamorphic series, and consists of hypogene schists, penetrated and broken up by prodigious outbursts of plutonic and trappean rocks. Gneiss and hornblende schist are the most prevalent rocks. Granite composed of felspar, quartz, mica and hornblende, and syenite composed of quartz, felspar and hornblende, are found on all sides. The granitic rocks are highly ferriferous, the mica and hornblende being frequently replaced by magnetic iron ore.

The mountains run in parallel ranges mostly north and south, or in a direction trending the nearest coast line. The highest points in the west nearly touch 7,000 feet, the highest in the east being about 5,000. Marked features in the landscape are the lofty droogs or isolated granitic hills, capped with fortifications, which stand forth like sentinels on every hand. These strongholds of former days have generally an unfailing supply of water from springs at the summit.

CLIMATE.

Rain-fall.—The rain-fall of Mysore ranges from nearly 200 inches a year in the Western Ghat regions to little more than 10 inches in the north centre. But

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

these are extremes that apply only to limited areas. The excessive rain of the Malnád rapidly diminishes eastwards, and from 30 to 36 inches may be accepted as the general average for the greater part of the country. The rainy season begins about the middle of May or beginning of June with the bursting of the south-west monsoon, accompanied with much electrical disturbance. In the west the rain is from this time uninterrmitting and puts a stop to traffic; in the centre and south, frequent showers and heavy drizzle continue almost every-day: this goes on till September, when there is usually a break. In the middle of October the wind changes to the north-east, and the monsoon sets in from that quarter with violent storms and heavy downpours sufficient to fill the largest tanks in a few hours. From early in November the weather usually clears up, and is followed by the cold season with its bright sunny days and chill foggy mornings. By March the signs of the approaching hot season begin to appear; the temperature continues to rise until it reaches the maximum in April and May, with occasional relief towards the close from thunder storms or from blinding dust storms unaccompanied with rain. The south-west monsoon then again sets in with its grateful stores of moisture. Bangalore, the seat of Government, is the only place in which a perfectly reliable and scientific register of temperature and rain-fall has been kept for a series of years, but records of these are also made with varying degrees of accuracy at all the head quarter stations.

Amount gauged.—The following table presents at one view the registered rainfall at the District stations, so far as data are available, for 46 years from 1837 to 1882. Those from 1837 to 1866 are based upon figures compiled by Colonel Puckle in 1867, from which time a more systematic record has been kept up in the several Districts.

Table of Rainfall in Mysore from 1837 to 1882.

Annual Average.—From these figures a mean annual average rain-fall is deduced for the Province of 31·22 inches, the range being from 35·41 at Bangalore to 23·91 at Chitaldroog. For the 46 years it varied in the following manner, the lowest recorded average being 16·4 inches in 1838 and the highest 52 in 1852.

Inches.	No. of years.			
15—20	3	1838,	1875,	1876
—25	3	1840,	1855,	1881
—30	13			
—35	17			
—40	6			
—45	3	1850,	1874,	1882
above 50	1	1852		

Out of the 46 years, therefore, the rain-fall has exceeded the average in 27 years, and fallen below it in 19 years.

Maximum.—In particular Districts the average maximum has been exceeded as follows:—

			Interval.
Bangalore	55·1 in 1852,	56·68 in 1874	22 years.
Tumkur	57·4 in 1852,	55·6 in 1858	6 ,,
Mysore	52·8 in 1852		
Shimoga	64·46 in 1872,	59·58 in 1882	10 ,,
Kadur	53·84 in 1882		

A periodicity of 5 to 6 years may perhaps be founded on these figures, which corresponds with the cycle in the variation of sun spots established by the most recent investigations.

Minimum.—The recorded minimum below the average also favors the same theory, so far as the figures afford data for estimation. Thus—

		Interval.
Bangalore	16·0 in 1838	
Kolar	12·19 in 1876	
Tumkur	13·8 in 1838	
Mysore	11·7 in 1840 and 15·8 in 1841.	
Shimoga	15·8 in 1838, 15·3 in 1843, 15·6 in 1855	5 years. 12 ,,
Chitaldroog	11·14 in 1875 and 9·97 in 1876, 11·56 in 1881	5 ,, 6 ,,

Monthly Average.—But it is less on the total fall of the year than on its seasonable distribution that the agriculturist is dependent. The following figures will show what the average fall has been at the head-quarters of Districts in each month over a series of years.

Monthly average of rain-fall for 30 *years*, 1837—1866, (*after Colonel Puckle*).

Month.	Bangalore.	Tumkur.	Mysore.	Shimoga.
January	0·26	0·10	0·06	0·02
February	0·17	0·31	0·18	0·21
March	0·59	0·60	0·54	0·20
April	1·40	1·54	2·74	1·87
May	5·00	4·73	5·50	3·20
June	3·18	2·60	1·58	3·95
July	3·87	3·35	2·24	6·12
August	6·02	5·00	3·16	3·74
September	6·30	5·30	4·08	2·72
October	5·96	7·16	6·69	4·93
November	1·65	1·12	1·75	1·07
December	0·83	0·33	0·49	0·30

The monthly average for 8 District stations for 12 subsequent years, from 1871 to 1882, has been as follows:—

Month.	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Chikmagalur (Kadur.)	Chitaldroog.
January	0·10	0·04	0·06	0·10	0·05	0·01	0·10	0·28

Rain-fall at Bangalore.—The complete details of the rain-fall at Bangalore are contained in the subjoined tables. One table shows the rain-fall registered at the Observatory of the Meteorological Department established at the Bowring Civil Hospital in the Cantonment, and embraces the results of 15 years from 1868 to 1882: the other table gives the rain-fall registered at the Petta Dispensary in the Town, during 13 years from 1870 to 1882. The distance between the two observatories is about 3 miles, the latter being to the south-west of the former. The results often vary considerably for the same downpour, and the mean averages seem to show that more rain falls on fewer days in the Town than in the Cantonment. The variation is almost uniform, as will appear from the following totals, except for the famine years 1876 and 1877; and the general result for 11 years, omitting these, is that the Petta has received above 2 inches of rain a year more than the Cantonment. This effect may be due to their respective positions. For the country falls away rapidly to the west and south from the Petta, which thus presents an eminence that intercepts the full current of the south-west monsoon. The Cantonment, on the other hand, has miles of high open country beyond it to the east and northwards, which probably causes a greater precipitation from the north-east monsoon current somewhere between Kadgudi and Malur.

Year.	Cantonment. Rain.	Cantonment. Days.	Town. Rain.	Town. Days.
1870	39·28	122	40·15	81
1	29·12	107	33·42	66
2	40·75	90	43·35	73
3	29·14	80	33·83	65
4	56·65	127	58·03	102
5	22·20	76	22·83	57
6	17·29	73	16·69	45
7	30·28	91	31·65	61
8	40·80	99	41·94	90
9	40·67	99	47·41	91
1880	51·70	131	51·21	112
1	27·44	73	30·37	76
2	37·03	112	35·18	109

By combining the results, we arrive at an average annual rain-fall for Bangalore of 36·88 inches falling on 87 days.*

* An interesting article on the climate of Bangalore and the Mysore country appeared in the *Madras Mail* of the 2nd May 1882, under the title of "Sun-spots and Seasons," in which the writer points out that "the two observatories which seemed to show the closest connection between rain-fall and the eleven years' cycle of spots were those at Mauritius and Bangalore." Moreover, the fluctuations in the prices of the staple grains in Mysore are proved to have run even more closely parallel to the variations in the sun-spot period. Thus the famine years 1876 and 1877 were years of minimum sun-spots.

HISTORICAL NOTES.

Past history in relation to population.—The political changes of the last 120 years have undoubtedly left their mark upon the population of Mysore, and affected its material progress. During the Muhammadan usurpation under Haidar Ali and Tipu Sultan, which lasted from 1761 to 1799, unceasing warfare not only kept the whole country in continual turmoil but also led to a great intermingling of various classes in the population. A strong Mahratta element had been introduced into the northern and eastern districts by the settlements of the Bijapur State during the 17th century, and these had been followed by the Moghul government of Sira. Subsequently, even after the Mysore Rajas had established their power, large tracts in the centre of the country were pledged to the Mahrattas to buy off their repeated invasions. Migrations of the people *en masse* from a district threatened with such inroads were so frequent that a special word, *valsé*, came into use to describe these fugitives. But under Haidar, wholesale transportations of population took place. In 1766, after the conquest of Malabar, 15,000 Nairs were deported to the less populous parts of Mysore, though only 200 are said to have survived. Large numbers of Coorgs were forcibly converted and removed to Seringapatam, of whom 10,000 made their escape on the night of Tipu's defeat by the British in February 1792. On Haidar's invasion of the Carnatic in 1780, when the district of Tanjore was ravaged, all the weavers and their families of that part were collected and driven to Seringapatam to people the island. The population of Sira was bodily transferred to the same place to furnish inhabitants for the suburb of Ganjam; while large numbers of Bedar youth, forcibly converted to Islam, were formed into the effective *chela* battalions of his army.

The pursuits of peace were naturally interfered with, and sometimes almost at a standstill, during these times of commotion; while under the pretext of *nazarána*, the people both rich and poor were mulcted of all they had to pay the expenses of war or meet the exactions levied by the enemy. Wilks speaks of "the frequency in Mysore of that most fatal source of depopulation, the presence of a Mahratta army. The usurpation of Haidar Ali" he says "may be considered as complete in 1760; at that time many of the districts were permanently occupied by Mahratta troops. Gopal Rao Hari invaded Mysore in the same year. It was again invaded by Bani Visaji Pandit in 1761; by Madhu Rao in 1765, 1767 and 1770; by Tryambak Rao in 1771; by Raghunatha Rao in 1774; by Hari Pant Purkya in 1776 and 1786; and lastly I have investigated on the spot and examined the traces of the merciless ravages committed in 1791 and 1792 by Parasuram Bhao. In consequence of these incessant calamities many districts formerly well peopled do not exhibit the vestige of a human being; and Chitaldroog District in particular may be considered as deprived of the great mass of its inhabitants." During the last wars of Mysore with the British, vast hordes of Lambánis accompanied the progress of the latter for the supply of grain; while considerable numbers of Tamil camp followers and traders attended on their footsteps for service and traffic.

From the peace of 1799 a more settled state of things was established, and the regency of Purnaiya was a prosperous period. The rebellion of 1831, though it caused disturbances in all parts of the country and retarded progress, did not probably introduce any new elements into the population. But one odious and barbarous custom which must have had some influence on the population may be mentioned. This was the sale by public auction of women who had been accused of adultery, the Government deriving a revenue from the transactions under the head of *Samayachar*, which was regularly farmed out in the large towns. "Among Brahmans and Komatis" says Wilks "females were not sold, but expelled from their caste and branded on the arm as prostitutes; they then paid to the ijardar an annual sum as long as they lived, and when they died all their property became his. Females of other Hindu castes were sold without any compunction by the ijardar, unless some relative stepped forward to satisfy his demand. These sales were not, as might be supposed, conducted by stealth, nor confined to places remote from general observation; for in the large town of Bangalore itself, under the very eyes of the European inhabitants, a large building was appropriated to the accommodation and sale of these unfortunate women, and so late as the month of July 1833 a distinct proclamation was necessary to enforce the abolition of this detestable traffic."

The various vicissitudes above recounted brought in many heterogenous components into the population of the country. They also perhaps stimulated an inclination to vagrant and Bohemian habits, accompanied with a tendency to improvidence and a trust that something would always turn up. The love of change and disposition to travel is kept up by pilgrimages and great fairs, and finds expression in the large annual migration to the coffee districts.

FAMINES.

Past Famines.—Regarding past famines the available information is very scanty, as the following extracts from the Report on the Mysore Famine of 1876—8 will show. "No record exists of any considerable famine due to drought having visited the Province of Mysore before the present time, though there are many references in Buchanan to the dreadful famines which followed on the devastation committed by the armies in the invasions of Parasuram Bhao and of Lord Cornwallis at the end of the last century:—

> It is when war is joined to scarcity, and interrupts the transportation of grain, that famine produces all its horrors. These were never so severely felt before as during the invasion of Lord Cornwallis, when the country being attacked on all sides and penetrated in every direction by hostile armies, or by defending ones little less destructive, one-half at least of the inhabitants perished of absolute want. I do not mean by this to reflect on the noble leader of the British army; the people, everywhere that it came, seem sensible that he avoided, as much as was practicable, doing them any injury—I, 390.

"Of the country north of Madgiri he says:—

> Ever since the devastation committed by Parasuram Bhao and the subsequent famine, it has been nearly waste, and many of the fields are overgrown with young trees—II, 4.

"Speaking of the Nagamangala Taluq:—

> On the approach of the British army, the Sultan laid waste the whole country between this and the capital, and forced the inhabitants to retire to the hills. A large proportion perished of hunger and of the diseases following too scanty a diet, and in the whole Nagamangala country one-half of the inhabitants are now wanting, although they have had eight years to recover. This is the calculation of the officers of Government. To judge from the desolation that I see around me, I should conclude the loss to be greater.

Famines of 1824 and 1833.—"In the present century, periods of scarcity have occurred in 1824 and 1833, but the traces of them in the official records are but slight. In 1824 the distress in Madras appears to have been very severe, and a remonstrance was made by the Government with the Raja of Mysore, who, it was reported, was putting hindrances in the way of export. When the early rain showed signs of failing (in June and July 1824), the Raja directed his officers to have prayers offered in the most important temples for rain, and to feed Brahmans. On these relief measures Rs. 3,434 were spent, and the results were apparently favourable, for the late rains were full and abundant. In 1833, again, the Madras districts adjoining Mysore suffered very severely, and the loss of life in the Guntoor district was so great that it was known as the Guntoor famine; but Mysore seems only to have shared in these sufferings in a more limited degree. Relief works were started by the Commissioner, whose orders were that each male labourer should be paid in grain one seer of ragi, each female and child over ten, three quarters of a seer. Works were to

This content downloaded from

All use subject to https://about.jstor.org/terms

be selected so as to keep people near their villages, and large numbers were not to be allowed to concentrate in one place. The estimated cost of the relief works was Rs. 32,000, but I have not found any record of the actual expenditure. Prices (according to the Administration Report of 1866-67) did not go higher than 30 seers of ragi and 16 of rice per rupee, which does not indicate severe pressure. In September abundant rain fell and all relief works were closed."

Famine of 1866.—"Mr. Dalyell's report on the Madras famine of 1866 contains some account of the scarcity prevailing in these years in the adjoining districts of the Madras presidency, which seem to have suffered more severely than Mysore. In this province there was serious alarm, and, for a short time, severe distress, due to the failure of the early rain in 1866 supervening upon reduced stocks and a scanty harvest in 1865, but it was confined for the most part to the Chitaldroog District and the taluks on the north-eastern borders of the province, in Tumkur and Kolar. The tanks were generally dry, and the early or Kartik crop of rice was a failure, involving a loss of 3 lakhs, out of a land revenue of 75 lakhs. Grain had been largely exported to Bellary and Dharwar, where the cultivation of cotton had to a great extent superseded that of food-crops, and the stocks in the country were consequently low. Common rice rose to 6¼ seers per rupee, and ragi to 10¾, or nearly four times the usual prices, and in the most distressed parts they were considerably dearer: in Sira in August the price of ragi was 7 seers, and of rice 5 seers per rupee. In June 1866 the distress was very severe; it was reported that many people were subsisting by grinding the kernels of tamarind fruit and the cotton seed to flour; and by feeding on leaves and roots, especially the root of the aloe. Villages were deserted by their inhabitants, who emigrated in search of food, and some cases of starvation were reported. The latter rains of September and October, however, were very plentiful, agriculture revived, and the acute symptoms of famine at once passed away. It was enjoined on all officers to exercise no interference with the market prices, or with the free exportation of grain; and when a Committee was formed at Bangalore to buy grain cheap and sell it retail at cost price, the Chief Commissioner refused to assist their object by any grant of public money, or to allow any Government officer to hold a place on the Committee for fear of violating the principles of free trade."

The Famine of 1877.—The latest and severest of recorded famines, that of 1877, has been so fully described in the separate Report on the subject that little needs here be said. The Administration Report for 1880-1 also has the following remarks bearing upon this subject. "Mysore has been peculiarly exposed to the disastrous effects of the vicissitudes of climate. The year 1831, when the government of the State was taken in hand, was a year of famine, and on several occasions since, the progress of the country has been retarded by the same misfortune. The ten years following 1851 mark a time of great trial, when year after year the scarcity and ill-timed rainfall of the periodical monsoons kept the agricultural classes in constant dread of actual want, and though the two or three seasons following were prosperous, there followed so bad a time in 1865 that famine was again present in the next year in parts of the State. Bad however as these seasons were and critical as was the condition of the country, the misfortune which was to come put them completely in the shade. The failure of rain in the years 1875 to 1877 brought about a famine such as was never known before. The events of these years are too recent to require detailed recapitulation in this place. It is only necessary to recall them inasmuch as they extinguished the large invested surplus of previous years, amounting to 60 lakhs of rupees, and substituted in its stead a debt of 80 lakhs of rupees; they seriously drained the wealth of the country and impoverished its agricultural resources, and they led to an appalling loss of population as shown by the recent census, to the extent of 1,172,548, taking the decimal increment under normal conditions so low as 6 per cent. The revenue of Mysore, which had by 1862 reached a crore of rupees, went on developing until it reached 110½ lakhs of rupees before the famine. In 1876-77 however the collections amounted to only 82½ lakhs, and in 1877-78 they were so low as 69½ lakhs, and though in the next year the revenue realized, including the arrears of the past, reached 121 lakhs, yet the experience of the two following years shows that for some time to come, it cannot be expected greatly to exceed 104 lakhs."

The following extracts from Lord Lytton's Minute of the 14th November 1878 contain a succinct account of the causes and progress of the famine. "The country of Mysore contained, at the census of 1871, a population of 5,055,000, nine-tenths of whom live by the land. In ordinary years it produces about 20

per cent more food than its population can consume; its land is held by a body of well-to-do peasant proprietors, who in average years have a comfortable surplus income; 15 per cent of its cultivated lands is irrigated, mainly from tanks; it is connected with the coast by a railway, and it is traversed by a net-work of fairly good roads; it had prospered for many years, although either the early or the latter rain-fall was occasionally scanty over a part of the province . . . . . The beginning of the recent calamity was the partial failure of the rains in 1875; the rain-fall was from one-third to two-thirds of the average; much of the food-crop was lost; but the stocks of food in Mysore have always been large; and this failure caused only temporary or occasional distress, for the price of food did not rise to double the ordinary rates. In the year 1876 the rain-fall again was very short; barely a third of the ordinary harvest was reaped; matters were aggravated by the fact that crops had failed in the adjacent districts of Madras and Bombay; and by the middle of December 1876 famine had begun. From December till March matters grew worse; 500 tons of food (enough to support 900,000 people) were imported daily by railway; yet the price of food ranged, during those months, at from 13 to 15 lbs. a rupee; that is to say, at four to five times the ordinary rates. In the months of April and May 1877, the usual spring showers came, and hope revived. But as the month of June wore on and as July came, it was apparent that the early rains were going to fail again, and for the third year in succession. Panic and mortality spread among the people; famine increased in the land; and it was not until the bountiful latter rains of September and October 1877 that the pressure of famine began to abate. During the eight months of extreme famine, no crops were reaped; the price of food ranged from three to six times the ordinary rates; and for the common people there were no means of earning wages outside the relief works. Even in 1877-78, though some relief was felt, the yield of the harvest was less than half of the food-crop of an ordinary year. From November 1877 till the present time of writing (Nov. 1878) the price of food has ranged at nearly three times the rate of ordinary years."

AGRICULTURE AND THE SOIL.

System of Agriculture.—In regard to the results of the system of agriculture and the productive power of the soil, Mr. Elliott made minute investigations and has recorded the following results. "The prevailing soil in Mysore is of a red color, formed of decomposed gneiss, poor and dry in character when compared with the rich loam of Hindustan Proper or the black soil of the Deccan. When the crops are off the ground it looks grey, hard, and unproductive: but after it has been tilled under the influence of the April showers, it assumes a warm purple tone; and when the crops on it are green and the undulating landscape is flecked with patches of light and shade from the drifting clouds, it reminds one much of the scenery in Devonshire. The main exception to this red soil is the north part of Chitaldroog, which abuts on the Bellary district of Madras, and consists mostly of black cotton soil (decomposed laterite), and there are tracts of the same black soil in many other parts of the province. In this red soil the crop that is mainly grown, where there is no irrigation, is ragi (*eleusyne corocana* or *cynosurus corocanus*) the favourite food throughout Mysore. It is known in Upper India as mandwa or marwa. Other crops are also cultivated, either in conjunction with ragi, or in inferior lands; but their area is small, and the produce is of little account compared with ragi. The best land is devoted to raising this crop: the fields are well tilled and highly manured, as much as ten tons of manure being sometimes placed on an acre.

"Ragi is a singularly delicate plant to be so completely the staple crop of the country. Sown usually late in June or early in July (though both the sowing time and the maturity are earlier in the western than in the eastern districts), after the heavy rain-fall which should usher in the south-west monsoon has soaked the ground, it then requires occasional but slight showers; a fall of from half an inch to an inch every ten or fifteen days is what the cultivator likes best; heavy rain during July and August, when it is young, would destroy the plant, and cessation of rain withers it up. When it approaches maturity, it requires the abundant downpour which marks the change of the monsoon to fill the ear, and fine weather to ripen it. It is cut in November and December, but not immediately threshed; the ear clasps the tiny grains so tight that they can hardly be separated from it till the plant has been thoroughly dried, and it is therefore piled in small stacks for a couple of months and then spread out, dried, and trodden with

All use subject to https://about.jstor.org/terms

cattle or threshed with sticks in the months of January to March. Along with the ragi a bean called ballar or avare (*dolichos lablab*) is sown in lines about six feet apart; this when the ragi is cut, has room to spread over all the field; it ripens and the pods are picked in January and February. The only other dry crop of any importance is the small bean called kulti or hurali (*dolichos uniflorus*), which is known by the English as horse-gram, though largely used as a food by the people. It is sown in September generally, for the most part in fields not considered good enough for ragi, and never manured, and ripens in December and January; and it and the ballar are then threshed or trodden out at once.

"It follows from this description that as far as the dry cultivation is concerned, that is, about 85 per cent of the arable area, there is but one crop in the year, and there is no rotation of crops. Ragi is sown year after year in the same field and kulti in the same field. Kulti cannot be sown if the north-east monsoon fails, and the production of ragi depends on the occurrence of both monsoons and on their downfall being seasonable and suitable.

"The area under irrigation is about 15 per cent of the whole cultivation, but the return from wet land is so much larger than that from dry, that the produce of the irrigated area is probably about 25 per cent of the whole produce of the country. Rice, which is the main crop grown in irrigated land, is not much eaten except by Brahmans, but it always commands a ready sale for export, and it may broadly be said that the average ryot in ordinary years eats his ragi (with the other cognate dry crops), keeping a little for storing and for seed and selling enough to pay his revenue, and that he sells his rice to purchase clothes, sugar, spices and other luxuries."

Results on the people.—"Thus it will be seen that the life of the agriculturist in Mysore is rather an easy one. No such continuous toil is known to him as that which consumes the days and sometimes the nights of his brother in Northern India, whose rain crop indeed gives him but little labour, but who ploughs and re-ploughs half his fields twelve and fourteen times to prepare them for the rabi or cold weather crop, and throughout the winter months rises at 3 to work the well which must not cease to yield its trickle if the wheat is to be kept alive. In Mysore it is all or nearly all rain-crop. The fields are ploughed through twice or thrice and sown, and after that are pretty much left alone, except for a single weeding, till the crop is ripe. The Kartik rice causes little more trouble, only more weeding and occasional cleaning out of the channel by which the water flows in. The Vaisakh rice crop requires more looking after, and is very useful for this cause, giving employment to the people at a time when there is no other field labour going on, tying the cultivator to the land, and preventing him from deserting it as he might do if disheartened by the loss of his other crops. But if the north-east monsoon fails, all but the largest tanks are empty, and there can be little or no Vaisakh rice crop."

Emigration to Coffee districts.—"This easy system of agriculture tends to foster the habit of emigration to the Malnád during the cold weather. The coffee plantations offer employment to a great number of labourers in coffee-picking, which lasts mainly from November to the end of February. Then almost all the coolies return to their villages to keep the Ugadi feast or New Year at home, only a few remaining permanently in the coffee districts, though a good number go back there in April when there is work to do in hoeing and weeding the planted ground, or clearing for fresh plantation. It is impossible to state with any accuracy what the numbers are who ordinarily emigrate to coffee. The eastern parts of Hassan and of Mysore are the tracts in which the emigration is most common, so much so that it is never easy to find labourers there for Public Works, all the surplus population having left for coffee. Tumkur and the western parts of Bangalore also supply some labour, but none go from Kolar or the east of Bangalore and hardly any from Chitaldroog. Sir Richard Temple, in his Minute of 14th February 1877, records that the 'Tumkur District annually sends away some 30,000 labourers to the coffee districts.' I have not been able to ascertain where this information was got, but it probably is not very far from the truth. In the end of September 1877 Major Moncrieff calculated that there were about 70,000 Mysore people in Coorg, though that was before the usual emigration time, but the season was altogether abnormal. The two Associations of coffee planters in North and South Wynád informed Colonel Hay that they ordinarily employed from 55,000 to 60,000 coolies. Judging from this, it may be estimated

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

that the number commonly employed in Coorg must be from 80,000 to 100,000, in Manjarabad and Koppa not less than 10,000, and in the Nilgiri plantations also about 10,000. Altogether the sum total of coolies who emigrate for employment must be more than 150,000; and as these are adults, male and female, they represent a total population of about 350,000. The wages usually given on coffee estates are 4 annas per man, and 2 annas 8 pies per woman, daily. Assuming that they are employed for four months, and consume half their pay, the savings brought home by these 150,000 people amount to 18¾ lakhs of rupees, or a quarter of the land revenue of the province."

General condition of the Ryot.—"So far the condition of the ryot is extremely advantageous; and on the whole I have no hesitation in saying that I consider the Mysore ryot to be, or to have been, better off than any class of cultivators in any province of India that I am acquainted with. The evidences of his prosperity were visible in his well-built, roomy, tiled house, with its cattle shed and stack-yard adjoining, in his capacious grain pits, in his numerous flocks and herds. Had he not been well to do, stout-hearted, and self-reliant, and possessed of a beneficial interest in his land, the ryot would not have held out through the first year of failure, and would not have passed through the terrible calamity of the second as little scathed as he has been."

Productive Power of the Soil.—"What the average produce in an ordinary year amounts to is one of those questions which no one has ever solved with any approach to accuracy, and all that can be attempted is to make an approximate guess, more or less sound, according to the width of the experience and observation on which it is based. A respectable consensus of opinion points to the assumption that for dry land an estimate of 2 khandis (or 8 maunds, or 640 lbs.) per cultivated acre, and for wet land 3 khandis (or 12 maunds, or 960 lbs.) will not be far from the real produce in a good year. But there are certain deductions to be made from this. A year is very seldom good both for dry and wet crops; to satisfy the wet crops it generally is necessary that there should be too much rain for the dry, and what is sufficient for the dry crops is seldom enough for the rice; or else, as in the years of drought since 1874, there is too little for both. So that probably an average year would not contain two average seasons, and the ordinary production of both crops taken together should be put a little lower. The seed grain comes to 8 seers per acre for dry and 25 seers for wet land, the wastage during a year may be estimated at 5 per cent, leaving a residuum available for consumption and export. The consumption per head of a labouring adult when well off is according to the best judges about 1 seer or 2 lbs. a day, and rather above it than below; but allowing for those who are pinched for means, 2 lbs. may be taken as a fair average ration for an adult; and when women, children and infants are reckoned in, the ordinary consumption per head cannot be reckoned at quite 1½ lbs. a day. I take 480 lbs. or 1½ khandis, as the usual rate of consumption per head per annum."

Prices of food.—"The general run of prices has always been low, and food, being produced in quantities considerably above the local demand, has been cheap. The ordinary price of ragi was from 30 to 40 seers (or 60 to 80 lbs.) per rupee, the higher price prevailing in large towns and in the western districts where ragi is less grown. Rice, for which a greater export demand exists, ruled much higher, from 12 to 15 seers (27 to 34 lbs.) per rupee. The seer, it should be mentioned, is in Mysore for almost all food-articles a measure of quantity, not of weight; its cubical contents being according to the Government standard, 74·8 inches. Thus the weight differs according to the specific gravity and the close packing of the article measured. A seer of rice weighs 2¼ lbs. generally, a seer of ragi about 2 lbs. The result of these low prices was naturally to lower the rate of wages. When a man could live comfortably on 12 annas worth of ragi for a month, he could not expect or receive a higher rate of pay. From this cause the Public Works Department were able to get their earthwork done at very low prices, and a cubic yard of earth for an anna became a kind of general standard in the mind."

Trade.—"The country abounds in active and enterprising traders. In ordinary years, salt, piece-goods, and metals are brought to Bangalore by rail and distributed by country carts all over the province, ragi, rice, coffee, cocoanuts, and areca-

All use subject to https://about.jstor.org/terms

nuts being exported in return. The food-supply is usually in excess of the local consumption: every ryot raises more produce than his household requires, and as he was seldom so much in debt as to have mortgaged it beforehand, he usually took it off to the market town to sell at the best advantage. An active habit of trafficking in grain is encouraged also by the frequent recurrence of local scarcities: in almost every year some depleted localities have to supply themselves from neighbouring and more prosperous parts. Nor is this traffic entirely in the hands of a guild or caste; the ryots themselves are constantly in the habit of clubbing together and sending off one or two of their number to buy grain at any convenient market or fair. The carts are good, with light well-made wheels, and the bullocks are of a famous breed and capable of much exertion; the ordinary load of a cart is more than half a ton, and the ordinary day's march 18 to 20 miles. Thus all things have combined to encourage commerce and to make trade brisk and active. The good effect of this was visible in 1877, when the great net-work of roads groaned under the endless trains of travelling carts, and every grain of ragi and rice, seen alike in the largest and the remotest market, was either carried from the railway terminus or brought up the Western Ghats, and distributed throughout the province by the unaided efforts of local enterprise."

SYNOPSIS OF CENSUS RESULTS.

Summary.—The following is a summary view, showing at a glance the principal component elements and distribution of the population in 1881.

	Males.	Females.	Both Sexes.	Per square mile.
Totals	2,085,842	2,100,346	4,186,168	169·32
By Religion.				*Percentage.*
Hindus	1,962,268	1,983,308	3,945,576	94·25
Jains	5,546	5,214	10,760	0·25
Muhammadans	102,626	97,858	200,484	4·78
Christians	15,350	13,899	29,249	0·69
Others	52	67	119	...
By Occupation.				
Professional Class	90,452	4,948	95,400	2·27
Domestic „	15,223	9,333	24,556	0·58
Commercial „	45,366	10,142	55,508	1·32
Agricultural „	1,008,826	599,809	1,608,635	38·42
Industrial „	128,926	46,034	174,960	4·17
Indefinite and non-productive	797,049	1,430,080	2,227,129	53·20
Urban or Rural.				
In towns	171,563	177,799	349,362	8·34
In villages	1,914,279	1,922,547	3,836,826	91·65

The great bulk of the population is thus seen to be Hindu, rural, and agricultural. The females exceed the males, but this apparently abnormal result, which is a direct effect of the late famine, is confined to the Hindus, and does not extend to those of the other religions reckoned as a whole.

Former Census Results.—The first Census is said to have been taken in 1841, and the next in 1851; but these were, it is believed, *khâneshumâri* estimates,

This content downloaded from

arrived at by multiplying the ascertained number of families by a figure assumed to be the average number of members composing each. The figure taken for the calculation in 1804 was, according to Wilks, 4½ and the same may have been subsequently adopted. However this may be, the estimates of population formed on the kháneshumári system were found, when compared with the regular census results of 1871, the first occasion on which the figures were obtained by actual enumeration of the people, to be 23 per cent too low. So far however as they go, the kháneshumári totals are not without value for purposes of comparison. They are thus stated :—

Year.	Population.	Increase per cent per annum.
1841	3,050,713	1·23 in 10 years.
1851	3,426,458	
1860	3,821,000	1·27 „ 9 „
1870	4,108,607	·75 „ 10 „

The rate of increase for 29 years, therefore, was 34·67 per cent, or 1·16 per cent per annum. A normal annual increase of 1 per cent may, it would thus appear, be accepted as an estimate well within the mark. Of European countries, the annual rate of increase in Belgium has been 1 per cent for 50 years past, in England and Wales 1·4 per cent for 10 years, in Germany 1·14 for 5 years. In India, the annual increase for the past 10 years has been at the rate of 1·16 in Bengal, and 1·31 in Berar.

DENSITY OF THE POPULATION.

FINAL CENSUS FORM I.

In the whole Province.—The total population as ascertained by the Census of 1881 is 4,186,188, which, distributed over 24,723 square miles, yields the rate of 169·32 per square mile. In order to compare this with the rate obtained in the Census of 1871, it is necessary to reduce the estimate of area from 27,077½ square miles, as then adopted, to 24,723, the estimate of 1881. On applying this correction, the density of population in 1871 was 204·48 as against 169·32 in 1881, a decrease of 35·16 per square mile.

In Districts.—The following are the figures by Districts :—

District.	Area in square miles.	Population per square mile.		Decrease.
		In 1871.	In 1881.	
Bangalore	2,901	285·54	230·65	54·89
Kolar	1,891	327·21	243·85	83·36
Tumkur	3,120	184·86	120·81	64·05
Mysoré	2,980	313·48	302·87	10·61
Hassan	1,879	355·15	285·15	70·00
Shimoga	3,797	131·41	131·61	...
Kadur	2,984	111·90	110·02	1·88
Chitaldroog	4,871	109·08	77·25	31·83

Allowance for Capital Towns.—In regard to the Bangalore District, if the Town and Cantonment of Bangalore be deducted, we have 237·47 per square mile in 1871 against 177·72 in 1881, a diminution of 59·75. Similarly, if the city of Mysore be deducted from the Mysore District, we have 297·40 per square mile in 1871 against 282·92 in 1881, a diminution of 14·48.

All use subject to https://about.jstor.org/terms

Comparison with other Provinces.—The density of population in the Mysore State compared with that of other Indian Provinces is most nearly equal to the density of population in the State of Jeypore in Rajputana, where it is 175·14 per square mile; and to that of the British district of Poona in the Bombay Presidency, where it is 168·40 per square mile.

With British colonies.—Compared with British colonial possessions, Mysore is almost equal in extent to Ceylon (25,365 square miles), and has a population nearly equal to that of the Dominion of Canada (4,324,310 in 1881.)

With European countries.—To extend the comparison to the countries of Europe which most nearly yield the same figures, we may say that Mysore has the area of Greece (25,041), with the population of Portugal (4,348,551 in 1881). But in density of population Ireland (162) comes the nearest, and in fact the normal population of Mysore is almost the same as that of Ireland at the last census (5,174,836 in 1881). Or we may say that Mysore is 5,000 square miles less than Scotland (29,819) in area, but has 450,000 more inhabitants than that country (3,735,573 in 1881). Yet the whole population of the Mysore country falls far short of that of London alone (4,764,312 in 1881).

Distribution by the new Districts of 1883.—The Census Forms are drawn up in accordance with the distribution of 8 Districts which existed in 1881. But since that time a revision has been made of the Districts, and for purposes of future reference the population as returned in the Census of 1881 is here further shown distributed according to the 6 Districts which were formed in 1883.

District.	Males.	Females.	Total.
Bangalore	357,371	366,927	724,298
Kolar	246,731	251,617	498,348
Tumkur	318,094	318,580	636,674
Mysore	583,071	611,016	1,194,087
Shimoga	300,540	282,026	582,566
Kadur	280,035	270,180	550,215
Total.....	2,085,812	2,100,346	4,186,188

Towns and Villages.—The number of towns and villages is returned as 17,665. The difference between these figures and the 19,630 returned in 1871 would indicate the depopulation of 1,965 villages since that time, an effect which must be attributed to the famine. The above figures relate to *mauzas*, that is, to *asali* or primary independent villages. But attached to these are the *dákhali*, included or secondary, villages, forming hamlets subordinate to their respective mauzas. These numbered 12,446 in 1871, but in 1881 their numbers are not returned.

Houses.—There are reckoned to be 901,344 houses, of which 733,200 are "occupied" as dwellings, and 168,144 are "unoccupied," being offices, temples, shops and other premises not used for residence. The average number of persons per occupied house is 5·71, but this rate is exceeded in 4 Districts, especially in Mysore District, where the average is 6·49, and in Bangalore District, where it is 6·17. The figures for 1871 showed 1,012,738 houses in the Province, with an average of 5 persons to each house, but no distinction was made between occupied and unoccupied premises. On the other hand a distinction, not noted in the present census, was made between houses of the better sort, namely, such as were valued at Rs. 500 and upwards, and those of an inferior sort. The former then numbered 30,213 with 6·3 persons per house, the latter 982,525 with 4·9.

Comparison of Statistics for 1871 and 1881.—The following table compares the figures for the two census periods :—

District.	Number of Towns and Villages.		Number of Houses.		Towns and Villages per square mile.		Houses per square mile.		Persons per house.	
	1871	1881	1871	1881	1871	1881	1871	1881	1871	1881 *
Bangalore ...	2,544	2,450	176,621	130,712	0·9	0·84	60·6	45·06	4·7	6·17
Kolar ...	2,911	2,983	165,892	95,520	1·1	1·58	64·4	50·51	3·7	5·94
Tumkur ...	2,481	2,295	124,863	118,780	0·7	0·67	34·6	34·73	5·1	4·55
Mysore ...	2,175	2,137	171,662	170,633	0·5	0·72	41·6	57·26	5·5	6·49
Hassan ...	3,190	3,024	123,069	132,741	1·0	1·61	37·4	70·64	5·4	5·34
Shimoga ...	2,829	1,973	90,932	94,550	0·7	0·52	23·9	24·90	5·5	5·85
Kadur ...	1,989	1,373	63,299	72,186	0·9	0·46	27·6	24·19	5·3	5·39
Chitaldroog ...	1,511	1,420	96,400	86,222	0·3	0·29	21·6	17·70	5·5	5·32
Totals.....	19,630	17,655	1,012,738	901,344	0·7	0·71	37·4	36·46	5·0	5·71

* Reckoned on the number of "occupied" houses only.

There are anomalies presented by these figures which it is difficult to explain except on the hypothesis of a difference in the mode of making the returns. Thus, although Kolar District has more villages in 1881 than in 1871, it has greatly fewer houses, the consequence being that the people seem more crowded in each house. This greater crowding of the residents per house is also very marked in Bangalore and Mysore Districts.

MOVEMENT OF THE POPULATION.

FINAL CENSUS FORM II.

Population Totals.—The population of Mysore as ascertained by the Census of 1881 amounts to 4,186,188. The following is a comparison of the results with those obtained in the previous Census of 1871.

Census of—	Males.	Females.	Total.
1871...	2,535,924	2,519,488	5,055,412
1881..	2,085,842	2,100,346	4,186,188
Decrease.....	450,082	419,142	869,224

These returns thus show a loss in 1881 of 869,224 on the total population as existing in 1871, being a diminution at the rate of 17·19 per cent. The decrease has fallen more heavily on males than on females by 17·74 to 16·63 per cent. The proportion of the sexes has thus been reversed, for whereas the males in 1871 outnumbered the females in the ratio of 100·65 to 100, they are in 1881 only 99·3 to 100.

There is only one cause to which these grave results can be traced, that dire calamity which overtook the country in 1876 and 1877, the famine: no other occurrence of sufficient magnitude to account for them has happened. Moreover, if 869,224 represents the resultant loss on the whole population three years after the removal of the scourge, during which there must have been every tendency to recovery in the figures, it would seem *primâ facie* that the higher estimate of 1,050,000 computed at

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

the time from the Test Census of 1878 as the total loss due to the famine, may have been nearer the mark than the lower one of 750,000 then suggested in lieu of it. This is indeed virtually admitted by Sir James Gordon in the Administration Report for 1880—81, where he says:—"The figured tables (of the Census of 1881) show a loss of 869,224 on the population of 1871, and if it may be assumed that the population had increased by 6 per cent up to the beginning of the famine, it represents a loss of 1,172,548 souls, without making any allowance for partial recovery in the last two years."

District Totals.—On confronting the details for the several Districts with one another, the following is the outcome :—

District.	Males.		Females.		Totals.		Difference in totals. + or —	Percentage of decrease.
	1871	1881	1871	1881	1871	1881		
Bangalore ...	414,543	330,820	413,811	338,319	828,354	669,139	—159,215	19·22
Kolar	309,685	228,193	309,269	232,936	618,954	461,129	—157,825	25·66
Tumkur ...	315,449	203,253	316,799	209,930	632,239	413,183	—219,056	34·64
Mysore ...	467,562	443,179	475,625	459,387	943,187	902,566	— 40,621	4·30
Hassan ...	328,324	261,416	340,093	274,390	668,417	535,806	—132,611	19·83
Shimoga ...	258,446	259,296	240,530	240,432	498,976	499,728	+ 752	...
Kadur	170,337	169,668,	163,588	158,659	333,925	328,327	— 5,598	1·67
Chitaldroog ...	271,587	190,017	259,773	186,293	531,360	376,310	—155,050	29·17

With an insignificant exception in Shimoga District, these figures tell a tale of very wide spread distress, especially in the eastern and northern parts of the country. The limits of several of the Districts have, it is true, undergone some variation since 1871, so that the intercomparison is not strictly accurate in each case, but the Districts in the aggregate remain the same, transfers that have taken place being only from one to another, the changes thus counterbalance on the whole. But an allowance must properly be made in the Bangalore District for the presence of the large Town and Cantonment of Bangalore, in which, so far from a decrease, there has been a considerable increase. Excluding the figures for this exceptionally populous centre, we have for the Bangalore District a population of 513,282 in 1881 against 685,841 in 1871, showing a decrease of 172,559, which forms a percentage of 25·16.

Difference by Religions.—On analysing the decrease so as to ascertain its relative incidence on the main religious divisions of the people, we obtain the following results :—

Divisions.	Totals.		Difference + or —	Percentage of difference.
	in 1871	in 1881		
Hindus	4,807,425	3,945,576	—861,849	— 17·92
Jains	13,035	10,760	— 2,275	— 17·45
Muhammadans	208,991	200,484	— 8,507	— 4·07
Christians	25,676	29,249	+ 3,573	+ 13·91
Others	285	119	— 166	— 58·24

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

It thus appears that while Hindus and Muhammadans lost, especially the former, Christians gained in numbers. Also the Hindu losses were about 4½ to 1 of those of the Muhammadans. The Jains were shown separately in 1871 and included among Hindus in 1881: for the purpose of this comparison I have separated them in both returns, but their rate of loss so nearly corresponds with that of the Hindus as not to affect the above broad statement.

In regard to the Christians their rate of increase is thus apportioned :—

Christians.	Totals.		Increase.	Percentage.
	in 1871	in 1881		
Roman Catholics....	18,257	20,510	2,253	12·34
Protestants	7,344	7,847	503	6.84
Others	75	892	817	

We thus arrive at the result that, apart from the fact of so very large a number having sprung up compared with the similar class in 1871 who do not acknowledge themselves as of either denomination, the rate of increase was about double among Roman Catholics of what it was among Protestants. And a further investigation would show that this increase is mainly among Native Christians.

The conclusions that may be drawn from these figures point to the famine as equally a cause, though necessarily not the sole cause, of the decrease in the Hindu and Muhammadan population and of the increase in the Christian population. For the accessions to the latter may perhaps to some extent be due to the numbers of unclaimed children rescued from the jaws of death that on the closing of the famine orphanages were transferred to the care of the Protestant and Catholic Mission bodies.

Why the famine should have fallen with so much greater severity on Hindus than on Muhammadans admits of various explanations. There is no reason to suppose that Muhammadans are as a body either more liberal or more benevolent in times of distress, or that their means are greater than those of the Hindus, but they form a more compact and united community, with equality of rights and a strong sectarian bond, which doubtless renders what organization they have for charity more effective; while on the other hand, the Hindus are not only split up into innumerable castes and sects irreconcileable in vital matters, but the entire lower orders are regarded as objects of aversion and causes of contamination. Not only so, but owing to the restrictions of caste in matters of food, the resources from which to feed a starving population of Hindus are rigorously confined to products which at such a time are the least to be had: while Muhammadans, having no such prohibitions to hinder them, can take advantage of other supplies in which nature may have been more bountiful.

Vital Statistics.—For the determination of the birth and death rates of the Province the available data are very imperfect. The following figures have been compiled from the returns for the past 12 years, but it is evident that only in the last 3 years have the figures begun to approach probable accuracy. So long as the number of deaths registered continued greatly in excess of the births, it was self evident that no just conclusion could be based on such statistics: and in 1875 the Deputy Surgeon General (Dr. George Smith) expressed his opinion that there must then have been a deficiency of about 14 per mille in the deaths and of 30 per mille in the births. From the 1st of April 1879 a new system of registration was introduced to remedy these defects, and the result has been a more trustworthy record.

Annual Number of Births and Deaths registered.

Year.	Births.		Deaths.		Population on which estimated.
	Number.	Per mille.	Number.	Per mille.	
1871...	33,921	6·71	58,218	11·51	5,055,412
1872...	45,602	9·02	57,990	11·47	as per Census of 1871.
1873...	42,574	8·42	53,340	10·45	,,
1874...	38,010	7·31	51,230	10·13	,,
1875...	34,846	6·89	51,276	10·14	,,
1876...	34,402	6·80	54,265	10·73	,,
1877...	24,013	4·75	243,166	48·10	,,
1878...	12,782	3·12	73,343	17·88	4,100,000
1879...	49,666	12·11	80,291	19·58	as per Test Census of 1878
1880...	87,315	20·85	79,822	19·06	4,186,188
1881...	99,521	23·77	71,240	17·01	as per Census of 1881.
1882...	100,784	24·07	70,892	16·93	,,

So far as any deduction can be made from these figures, it would appear that a normal death-rate of 10 to 11 per mille per annum before the famine was by that calamity suddenly raised to over 48 per mille: and that similarly a normal birth-rate of 6 to 9 per mille per annum was brought down by the famine to between 3 and 4 per mille. In other words, the mortality due to the famine was nearly five-fold that of an ordinary year, while the number of births fell to a half.

By Sex.—The following are the details by sex for the last three years, and the ratio of the figures to the total population of the same sex:—

Year.	Births.				Deaths.			
	Males.	Per mille.	Females.	Per mille.	Males.	Per mille.	Females.	Per mille.
1880 ...	45,034	21·58	42,476	20·22	42,127	20·19	37,695	17·94
1881 ...	50,866	24·38	48,655	23·16	36,624	17·55	34,616	16·48
1882 ...	51,780	24·82	49,004	23·33	36,353	17·42	34,539	16·44
Means.....	49,227	23·59	46,678	22·24	38,368	18·39	35,617	16·95

All use subject to https://about.jstor.org/terms

For Bangalore.—It may be useful to compare with the foregoing the figures for the Town and Cantonment of Bangalore for 5 years past.

Births and Deaths Registered in Bangalore (Town and Cantonment) for 5 years from 1878 to 1882.

Year.	Births.				Deaths.			
	Males.	Females.	Total.	Per mille.*	Males.	Females.	Total.	Per mille.*
1878 ...	1,287	1,235	2,522	17·69	1,890	1,780	3,670	25·75
1879 ...	1,601	1,529	3,130	21·96	1,405	1,344	2,749	19·28
1880 ...	1,623	1,645	3,268	22·93	1,267	1,140	2,407	16·88
1881 ...	1,614	1,630	3,244	20·81	1,411	1,448	2,859	18·34
1882 ...	1,881	1,804	3,685	23·64	1,240	1,233	2,473	15·86
Means	1,601	1,569	3,170	21·41	1,443	1,389	2,832	19·22

* Pop. 142,513 in 1871 : 155,857 in 1881.

For Mysore.—The following is a similar statement for the city of Mysore; but it is evident that the figures cannot be relied on, at least as regards the number of births.

Births and Deaths registered in the City of Mysore for 5 years, from 1878 to 1882.

Year.	Births.				Deaths.			
	Males.	Females.	Total.	Per mille.*	Males.	Females.	Total.	Per mille.*
1878 ...	286	244	530	9·16	849	772	1,621	28·03
1879 ...	244	178	422	7·29	552	493	1,045	18·01
1880 ...	401	338	739	12·43	638	523	1,161	20·02
1881 ...	635	595	1,230	20·40	702	596	1,298	21·52
1882 ...	848	657	1,505	24·96	906	903	1,809	30·00
Means	483	402	885	14·85	729	657	1,387	23·53

* Pop. 57,815 in 1871 : 60,292 in 1881.

Comparison with figures of 1871 and 1878.—This is the place n which it was intended to inquire how the Census Returns of 1881 compared with h ose of the Test Census of 1878 and those of the General Census of 1871 as regards

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

the hoblis and villages which were selected for detailed examination at the end of the famine. But, in proceeding to make such a comparison, unexpected difficulties have arisen. In the first place, no records can be traced of the Test Census of 1878 beyond the results published in Mr. Elliott's Report: then, the figures quoted by Mr. Elliott as those of the Census of 1871 differ in many cases from those of the printed returns of that Census, and no explanation can be discovered of the variations: lastly, even local inquiry has failed to identify in all cases the villages which were selected for the Test Census in 1878. Owing to the entire re-organization of Taluqs and Hoblis which has since been carried out, added to the death or dispersion of all officials who could give information on the subject, it has been found absolutely unavoidable to omit from the calculations the entire hoblis of Ajimpura in Kadur District, with 30 villages, and Hebbur in Tumkur District, also with 30 villages. For the remaining hoblis and villages the closest approximation to the exact figures has been made which the aforementioned drawbacks allowed.

By Districts.—The following, allowing for the above omissions, is a summary of the comparative results by Districts:—

District.	No. of villages in which Test Census was taken in 1878.	Population of these villages in 1871.	Population of the same in 1878.	Percentage of decrease.	Population of the same in 1881.	Percentage of increase since 1878.
Bangalore	269	73,875	49,076	33·56	53,633	9·28
Kolar	233	52,477	37,923	27·73	39,059	2·99
Tumkur	218	58,354	36,704	37·10	37,523	2·23
Mysore	138	46,871	37,864	19·21	45,279	19·58
Hassan	211	45,611	32,369	29·03	34,679	7·13
Shimoga	97	32,007	28,111	5·92	30,357	7·98
Kadur	60	19,072	12,505	34·43	15,109	20·82
Chitaldroog	168	74,657	45,823	38·62	50,074	9·27
Total.....	1,394	402,924	280,375	30·41	305,713	9·03

Results of the Comparison.—The actual interval between the Census of the 14th November 1871 and the Test Census of the 19th January 1878 was 6 years and 2 months; and between the latter and the Census of the 17th February 1881 the interval was 3 years and 1 month. Taking the intervening periods as 6 and 3 years respectively, it appears from the above figures that of the villages subjected to the Test Census, which embraced 51 out of 68 Taluqs in the Province, the population in the 6 years to the close of the famine fell at a rate equal to 5·06 per cent per annum, and that for the 3 years succeeding the famine the population recovered its strength at the rate of 3·01 per cent per annum. But much of this latter rate must have been due to return of emigrants, as we have deduced 1·16 per cent as the normal annual rate of increase spread over a long series of years. And that this is the fair normal ratio of annual increment finds confirmation in the opinion of the Deputy Surgeon General on the vital statistics, already quoted; for according to him the annual excess of births over deaths would be 1·2 per cent if they were accurately recorded.

The Loss by Famine.—In order to apply the above results to the actual figures of the present and former General Census returns, with the view of estimating by the light of the most recent investigations what the loss of population by the great Famine of 1876 and 1877 was, the following calculations seem to be required. The decrease of population in 1881 below that of 1871 was 17·19 per cent. If, to this be added a normal increase of 3·48 per cent allowed to have taken place since the close of the famine in 1878, we arrive at 20·67 per cent as the apparent decrease at that time; which, turned into figures, represents a loss of 1,044,897 lives. But from 1871 to 1876 when the famine began, or say during 5 years, the population must have been adding on its normal rates of growth. We may estimate the population just before the famine therefore at 5·80 per cent above what it was in 1871. Adding then this increase to the loss already estimated, the total loss due to the famine and its attendant evil influences, whether by deaths or by failure of births, rises to the sum of 1,338,095.

In short, if these estimates may be relied on, we are justified in reckoning that Mysore entered into the famine with a population 5,348,340 strong and came out of it with a population reduced to 4,010,245; and this in spite of lavish expenditure and the supremest efforts to stem the dreadful tide of mortality. What then must have been the depletion of over-stocked populations produced by such natural calamities in times when next to no remedial measures were attempted.

Corroboration of Estimates.—It may further be added that the results of the foregoing calculations seem to be fairly in accordance with the figures admitted by Sir James Gordon (see p. 39), namely, "1,172,548 without making any allowance for partial recovery in the last two years." But there is another way in which somewhat similar results may be arrived at. Taking the ordinary mortality at 24 per mille, which as Dr. Smith estimated would be about the correct proportion, and reckoning that this, basing our calculation on the deductions made on p. 41, was raised by the famine to nearly five-fold or say 4·75 times; also, on the same grounds, estimating that a mean annual birth-rate of 36 per mille was reduced by the famine to one half: the effect of these losses operating for 21 months would result in a total reduction of 1,235,464 in the population. The results arrived at by Mr. Elliott were much the same, namely, an actual decrease in the population of 1,260,750; but by allowing for emigrants who might return the number was reduced to 1,160,750. By whatever process therefore the subject is approached, the appalling extent of the calamity, in spite of everything done to mitigate it, stands out in unequivocal proportions.*

*Guided by the returns of the Preliminary and the Final enumerations of the Test Census, Mr. Elliott says, they give "a death-rate of 127·8 and a birth-rate of 7 per mille. These figures may, I believe, be taken as absolutely correct...Such a rate of mortality, if continued for 8½ years, would have exterminated the whole population."

DISTRIBUTION OF THE POPULATION BY RELIGION.

FINAL CENSUS FORM III.

Main Religions.—To the entire population those professing the three main religious beliefs bear the following proportion:—

Hindus, including Jains	94·50	per cent.
Muhammadans	4·78	„
Christians	·69	„

As the corresponding figures for 1871 were 95·34, 4·13 and ·50 respectively, there has been for the decade a considerable increase in the number and proportion of Christians. Muhammadans, though fewer by 8,500, bear a higher proportion to the total population than before; while the Hindus have greatly declined both in numbers and proportion. On comparing the sexes, a preponderance of females over males has taken place among Hindus, but not among Muhammadans and Christians. These must therefore be looked upon as somewhat abnormal results, due to the calamitous events of 1876 and 1877.

Comparison of statistics.—The following table presents the whole of the facts at one glance:—

Class.	1871.				1881.			
	Males.	Females.	Total.	Per-centage.	Males.	Females.	Total.	Per-centage.
Hindus	2,407,642	2,399,783	4,807,425	95·09	1,962,268	1,983,308	3,945,576	94·25
Jains	6,780	6,255	13,035	·25	5,546	5,214	10,760	·25
Muhammadans ...	107,785	101,206	208,991	4·13	102,626	97,858	200,484	4·78
Christians	13,526	12,150	25,676	·50	15,350	13,899	29,249	·69
Others	191	94	285	...	52	67	119	...
Total.....	2,535,924	2,519,488	5,055,412	...	2,085,842	2,100,346	4,186,188	...

Among the "others" in 1881 are included 9 Buddhists, 47 Parsis, 29 Sikhs and 1 Jew.

District totals.—The Hindus are most numerous in Mysore District, which claims 21·7 per cent of the whole; then follow Bangalore District with 15 per cent, and Hassan District with 13·2 per cent. Of the Jains, as many as 34·2 per cent are in Shimoga District. Mysore, Hassan, Tumkur and Kadur Districts have from 14 to 11 per cent. The Muhammadans congregate most in Bangalore District, and then in Mysore District; the proportion of the whole in the former being 27·7 per cent and in the latter 20·4 per cent. Christians are of course most numerous in Bangalore District, to which 68 per cent of the whole belong, while in Mysore and Hassan, which have the next highest numbers, there are only 8·9 and 8·1 per cent of the Christian population. Of the 9 Buddhists, 8 are in Bangalore District. Of the 47 Parsis, 36 are in Mysore District, and 11 in Bangalore District. The Sikhs are most numerous in Hassan District, which has 25 out of the 41; 10 are in Mysore District and 6 in Tumkur District. The single Jew is in Hassan District.

It will be useful for future reference to include here a table of the Population according to Religion distributed by the Districts as reorganized in 1883.

Christians (Form III A).—The analysis of the returns for Christians shows the following elements :—

European British subjects	5,033	or 17·2 per cent.
Other Europeans or Americans	155	„ ·5 „
Eurasians	3,040	„ 10·3 „
Natives	21,021	„ 71·8 „
Total Christians.. ..	29,249	

Distributed according to creed, 26·8 per cent are Protestants, and 70·1 per cent Roman Catholics, while 3 per cent belong to neither.

The following are the details :—

Class.	Protestants.	Roman Catholics.	Others.
European British subjects	4,027	853	153
Other Europeans or Americans ...	60	86	9
Eurasians	1,693	1,081	266
Natives	2,067	18,490	464
Totals.....	7,847	20,510	892

Protestants.—The head Protestants includes the following denominations and number of adherents under each.

Denomination.	Europeans.	Eurasians.	Natives.	Total.
Church of England	3,577	1,496	513	5,586
Wesleyans...	260	84	1,300	1,644
Congregationalists	22	6	219	247
Presbyterians	164	45	33	242
Baptists	57	62	2	121
Armenians	7	...	...	7

Muhammadans (Form III B).—The Muhammadans are divided into the following sects :—

Sunni . ..	179,296	or 89·4 per cent.
Shiah	4,248	„ 2·1 „
Wahhabi	516	„ ·2 „
Daire or Mahdavi	3,777	„ 1·8 „
Others	12,647	„ 6·3 „

The large number returned as belonging to none of the above sects, it will be seen when Form VIII comes under review, are composed of Pindari, Labbe, Maiman and other immigrants of foreign descent. A singular feature is the disproportion between the sexes among the Daire or Mahdavi sect, the members of which are nearly all located either at Channapatna or at places in Mysore District. There are only 1,437 males to 2,340 females. Either therefore polygamy may be more frequent in this sect than among other Muhammadans; or, which may partly be the case, the men were absent at the time of census for trade at the western coast, which they annually frequent at certain seasons for that purpose. Their numbers in 1871 were 648 males and 729 females: there has thus been a very large development of the sect, and the disproportion of the sexes has been intensified. But the Daires, it is stated, do not intermarry with the rest of the Muhammadans, and this might perhaps go some way towards explaining the preponderance of females, though not in itself sufficient to account for the disparity in numbers.

DISTRIBUTION OF THE POPULATION BY SEX.

FINAL CENSUS FORM IV.

Ratio of the sexes.—The following table shows the ratio of the sexes in each District and in the whole Province, as returned in 1871 and in 1881 :—

District.	Males to 100 Females.		
	1871	1881.	Difference.
Bangalore	100·17	97·78	—2·39
Kolar	100·13	97·96	—2·17
Tumkur	99·25	96·81	—2·44
Mysore	98·31	96·47	—1·84
Hassan	96·54	95·27	—1·27
Shimoga	107·45	107·84	+0·39
Kadur	104·13	106·93	+2·80
Chitaldroog	104·55	101·99	—2·56
Total.....	100·65	99·39	—1·26

While therefore in 1871 only 3 out of the 8 Districts had fewer males than females, in 1881 only 3 Districts had more males than females. Of the former it was remarked at the time that the deficiency was largely due to the emigration of male coolies to the coffee districts in Wynad and Coorg at the date of the census, a season when there is a great demand for labor on the coffee estates and hardly any farming operations are being carried on in the plains. The same explanation holds good in the present case, and the Coorg Census accordingly shows 48,688 natives of Mysore in that Province at the time of enumeration, of whom 28,981 were males and only 19,707 females. In the Madras Districts of the Nilgiris and Malabar were 33,024, of whom 20,987 were males and only 12,037 females. To a similar cause may doubtless be attributed some of the increase in the male population returned in the Kadur District, where there has been a great development of coffee planting since 1871, and in a less degree in Shimoga District. But with all allowances on this account, the figures point unmistakeably to the great disturbance caused by the famine in all the social relations of the people.

But it should here be stated that according to some authorities, and proceeding upon the statistics of European countries, which are no doubt generally more reliable and have certainly been recorded for longer periods than those of Asiatic countries, an excess of females over males, in the proportion of about 105 of the former to 100 of the latter, is the normal condition of any population. So far therefore as the returns fail of exhibiting some such result by so much is it argued that the female population has been, from whatever cause, understated.

However much credit may be due to this theory, that it holds universally good has yet to be proved. As a matter of fact, the present census has not yielded results which go far towards establishing its truth when applied to India. The returns for Mysore, both in 1871 and 1881, seem to show a very even balance of the sexes as present in the country at the time of enumeration. In 1871 there were 100·65 males to 100 females; in 1881 there are 100·69 females to 100 males. And when the large emigration of male labourers to the coffee districts and the fact of their absence, especially at the period of the latter census, are taken into account, there seems little reason to believe that the total number of females materially exceeds that of males, or even that it does so at all.

By Religions.—It has already been seen that it is only under the head of Hindus that the females exceed the males in the aggregate. A further inspection shows that this irregular result has not been produced among the higher orders—the Brahmans and Kshattriyas—but is confined to the lower orders forming the great

All use subject to https://about.jstor.org/terms

body of the people, especially the agricultural classes; and among them principally affects the Toreya and the Vakkaliga, with the exception of Hálu Vakkaliga. It must be noted, however, that in certain castes the excess of females over males is not peculiar to the present census, but existed in 1871. They were the Rajpinde, Besta, Banajiga, Ganiga, Goniga, Kuruba, Vakkaliga and outcastes. Among the Muhammadans, although in the general total the males are not below the females in number, there are two sections in which the females exceed the males, namely Daire or Mahdavis and Pindaris. Moreover the same was the case with these two classes in 1871. In fact, except the Rajpinde, no class, Hindu or Muhammadan, shows such a disproportion of the sexes either in 1871 or 1881 as the Daire, while the Pindari is the only class deficient in males in 1871 which has shown some tendency to recover the due proportion in 1881.

The following table shows the ratio in each of these census periods of all the castes and tribes in which the females exceeded the males :—

Caste.	Males to 100 Females.		Remarks.
	1871.	1881.	
HINDUS.			
Trading class.			
Nagarta	...	98·37	
Miscellaneous.			
Rachevar	...	96·44	
Jetti	...	97·26	Rajpinde in 1871 were 88·27.
Agricultural class.			
Sivachar	...	97·63	
Vakkaliga	98·30	94·25	The Halu Vakkaliga have more males than females in 1881.
Kunchiga		98·38	
Raddi		97·43	
Sadar	...	98·29	
Kuruba	98·98	97·46	
Uppara...	...	99·05	
Beda	...	98·71	
Toreya	...	92·36	The Besta, which included the Toreya in 1871, were then 98·85.
Teluga Banajiga	99·86	96·69	
Idiga	...	98·32	
Artisans.			
Togata...	...	95·32	
Agasa	...	98·22	
Goniga	93·57	92·82	
Ganiga	97·62	94·87

DISTRIBUTION OF THE POPULATION BY CIVIL CONDITION.

FINAL CENSUS FORMS V AND VI.

Civil condition.—The following is a summary of the civil or conjugal condition of the people belonging to the main religious divisions:—

Civil condition.	Hindus.		Muhammadans.		Christians.		Others.	
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Single	1,087,216	714,812	58,553	36,063	9,874	6,667	31	21
Married ...	757,493	770,414	39,788	39,430	4,995	4,731	21	32
Widowed ...	123,105	503,296	4,285	22,365	481	2,501	0	14

The above figures yield the following percentages:—

Religion.	Single.		Married.		Widowed.	
	Male.	Female.	Male.	Female.	Male.	Female.
Hindus	55·2	35·9	38·4	38·7	6·2	26·3
Muhammadans	57·0	36·8	38·7	40·2	4·1	22·8
Christians	64·3	48·5	32·5	34·0	3·1	17·9

Ages of the married (Form VI.)—The proportion of those who are married at ages under 25 stands thus:—

Age.	Hindus.		Muhammadans.		Christians.	
	Male.	Female.	Male.	Female.	Male.	Female.
0—9	·0	·6	·0	·2	·0	·0
10—	·4	3·3	·2	2·1	·0	·7
15—	1·2	6·0	·6	6·3	·3	4·7
20—24	3·1	7·6	2·4	8·5	2·3	6·5

In regard to early marriage it thus appears that, out of 100, there are three times as many Hindu girls married under the age of 10 as Musalmani girls: and half as many again under the age of 15. Also that out of 100, twice as many Hindu boys are married under the ages of 15 and 20 respectively as Musalman boys at these ages.

The actual numbers are 1,251 boys and 12,020 girls married under 10 among Hindus, 53 boys and 214 girls among Muhammadans, with 3 boys and 8 girls among Christians. Between 10 and 15 there are 7,896 boys and 67,427 girls married of the Hindus, 210 boys and 2,121 girls of the Muhammadans, 15 boys and 107 girls of the Christians. But it must be borne in mind that betrothed children are considered as married though they do not live together till the puberty of the girl. As soon as this occurs it is compulsory.

The report from the Kolar District draws attention to a Sudra girl of 2 returned as married; also a Kuruba boy of 2 and a Banajiga boy of 4. The Chitaldroog report says, "the tables show that Sudra infants not even a year old and very young children of the outcastes and even of the Muhammadan faith have been brought under the marriage tie by their parents." Early marriage is supposed to be specially obligatory in the case of Brahmani girls, who rarely exceed the age of 10 at the time of the ceremony. A few however appear as old as 15 who are not

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

married. Some of these cases may be due to social reform, but from one District the explanation received is that they are generally either girls who have been exco m municated or the offspring of such persons.

Ages of the widowed.—For those who are widowed the following are the percentages between the ages of 10 and 30.

Age.	Hindus.		Muhammadans.		Christians.	
	Male.	Female.	Male.	Female.	Male.	Female.
10—	·0	·2	·0	·0	·0	·0
15—	·0	·6	·0	·3	·0	·2
20—	·1	1·5	·0	·9	·0	·7
25—	·4	2·4	·2	1·5	·2	1·2

There are 24 Hindu boys and 358 Hindu girls under 10 returned as widowed, while among Muhammadans only 3 boys and 2 girls under that age are so designated: no Christians. From 10 to 15 there are 341 boys and 4,936 girls widowed among the Hindus, 11 boys and 81 girls among the Muhammadans, and 3 girls among the Christians.

Of Hindu women between the ages of 30 and 40, there are 5·7 per cent widows to 8·6 per cent wives. Musalmanis of the same age show 4·4 per cent widows to 9·1 per cent wives. Christian women between 30 and 40 are 3·1 per cent widows to 9·3 per cent wives, or as 1 to 3.

A Woddar girl of 4 is entered as widowed: also a Sudra girl of the same age. According to Hindu custom, however, betrothal is the same as marriage in relation to widowhood. A girl only betrothed to a husband equally becomes a widow by his death as one who is fully married and lives with her husband. She thereby of course becomes equally debarred in most castes from marrying again or from indulgence in social pleasures of any kind to the end of life. This it is which lends such importance to the question of widow re-marriage as a proposed measure of Hindu social reform.

DISTRIBUTION OF THE POPULATION BY AGE.

FINAL CENSUS FORM VII.

Totals by periods.—The following details show the numbers of the population at various ages, and the percentage to the total:—

Age.	Males.	Females.	Total.	Percentage.
Below 15	767,991	770,432	1,538,423	36·74
15 and below 30	580,905	599,309	1,180,214	28·19
30 „ 50	551,822	508,021	1,059,843	25·31
50 and upwards	185,124	222,524	407,708	9·79

Females preponderate over males at every period up to below 10. From 10 and below 20, the males exceed the females. The latter again outrun the males from 20 to below the age of 30. From 30 years of age to below 50, males again take the lead. From 50 and upwards, especially between 50 and below 55, and from 60 upwards, females greatly outnumber males.

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

The following are the details for these periods :—

Ages.	Male.	Female.	Proportion of Males to 100 Females.
0—9	476,827	502,720	94·84
10—	493,997	450,051	109·76
20—	378,072	416,970	90·67
30—	551,822	508,021	108·62
50 and upwards	185,124	222,584	83·17

Figures of 1871.—The age periods adopted for the Census of 1871 do not correspond with those for the Census of 1881 ; hence inter-comparison is not possible. But so far as the figures of 1871 went, the following were some of the results. To the age of 6, females preponderated over males ; from that to 12, males were in excess ; from above 12 to 30, females were in excess ; from above 30 to 60, males took the lead ; above 60, females were again ahead. The exact figures at these age periods in 1871 were :—

Ages.	Male.	Female.	Proportion of males to 100 females.
0— 6	486,644	503250	96·70
—12	436,292	393,040	111·00
—30	879,690	964,020	91·25
—60	680,345	607,134	112·05
above 60	52,953	52,044	101·74

The only general conclusion that can be drawn from these statements is that greater male power was inherent in the population as it stood in 1871 than in the population as it stood in 1881 : but at the most marriageable age, from 20 up to 30, young men were on both occasions either wanting or abroad.

Infants.—The statistics for the periods of infancy are of special importance in connection with the check on the birth rate which was one of the effects of the famine. Assuming that the famine came to an end about the middle of 1878, we have, up to the time of the Census, a period of nearly 2 years during which the birth rate would tend to recover itself and approximate the normal percentage of ordinary times.

The actual returns yield the following results :—

Percentage of Infants.	Under 1 year.	1—	2—	3—	4—	5—9
Total to total population.....	2·95	1·43	1·32	1·65	2·10	13·93
Males to male population	2·88	1·41	1·28	1·53	2·03	13·78
Females to female population ...	3·02	1·45	1·36	1·76	2·10	14·15

In order to allow of a comparison being made with the figures obtained in the Census of 1871 a special column was, by the Census Commissioner's instructions, provided in the working register. By resort to this the following table is obtained.

This content downloaded from

All use subject to https://about.jstor.org/terms

Percentage of Infants.	1871.		1881.	
	1 Year.	Above 1 and under 6.	Under 1 Year.	1 and under 6.
Total to total population.....	3·92	15·65	2·95	9·01
Males to male population ...	3·83	15·35	2·88	8·76
Females to female population ...	4·02	15·94	3·02	9·26

The first column for 1881 shows a deficiency of nearly 1 per cent as compared with the first column for 1871, but these are not strictly based on equivalent data, for infants which had completed 1 year were included in 1871 whereas they were excluded in 1881. Nevertheless the difference would probably be very slight, and may for the present purpose be disregarded. So far however as it would affect the result, it would go towards raising the percentage of 1881, and making up the deficiency above pointed out, though perhaps not fully. At any rate the ratio of infants of one year and under would seem to be rising to the normal level, with a slight advantage in favour of female infants. The effects of the famine in reducing the birth-rate may thus be assumed to have worked off, though the usual excess of male births, as indicated by the figures given on page 41, had not yet established itself.

Children.—In regard to all children up to 6 years of age, it appears that they formed in 1881 only 11·96 per cent of the population, against 19·57 per cent in 1871, a deficiency of 7·61 per cent as compared with the juvenile population of 10 years ago. The actual figures were 989,894 in 1871 and 501,067 in 1881, showing even three years after the famine a loss of nearly half a million from the combined causes of famine mortality and failure of births. If the comparison be carried on, as with the aid of the working register can be done, for children above 6 and under 12, which will embrace all who were born before the famine and survived it, we have the following results:—

Percentage of children of age 6 to 12.	1871.	1881.
Total to total population.....	16·40	21·33
Males to male population ..	17·20	21·44
Females to female population ...	15·59	21·23

We here emerge from the trough of the famine wave and find that no other abnormal influences were at work to check the healthy and natural increase of the population. We also have clear proof of the efficacy of the benevolent arrangements both private and public which had for their special end the rescue of starving children. The actual figures for 1871 were 829,332, while for 1881 they were 893,311; a gain of population at this age of nearly 64,000 in spite of what the country had passed through in the ten years.

Total juvenile population.—The following is a complete statement of the figures for the juvenile population below 15 years of age. Up to 10 the steps rise by single years; from 10 to 14 they rise by 3 and 2 years respectively:—

Age.	Males.	Females.	Total.	Percentage to total population.
Under 1	60,078	63,639	123,717	2·95
1—	29,462	30,511	59,973	1·43
2—	26,807	28,737	55,544	1·32
3—	31,992	37,150	69,142	1·65
4—	42,548	45,403	87,951	2·10
5—	51,931	52,809	104,740	2·50
6—	60,100	62,108	122,208	2·91
7—	52,296	55 823	108,119	2·58
8—	82,101	83,518	165,619	3·93
9—	39,512	43,022	82,534	1·97
10—12	213,334	201,497	414,831	9·90
13—14	77,830	66,215	146,045	3·48
Total.....	767,991	770,432	1,538,423	36·74

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

These figures make it abundantly plain, if further evidence were wanting, that it is among infants of 1, 2 and 3 years of age, or such as were born in the famine period, that the great deficit occurs; and that at least half the number of infants of these ages that would ordinarily have been in existence either never came to the birth, or were mercifully carried off by death soon after their appearance in the world.

Adult population.—For the adult population, or all from the age of 15 to below 60, the following are the figures, rising by quinquennial steps:—

Age.	Males.	Females.	Total.	Percentage to total population.
15—	202,833	182,339	385,172	9·20
20—	176,786	204,431	381,217	9·10
25—	201,286	212,539	413,825	9·88
30—	188,071	186,130	374,201	8·93
35—	153,610	124,480	278,090	6·64
40—	131,549	126,577	258,126	6·16
45—	78,592	70,834	149,426	3·56
50—	75,328	91,720	167,048	3·99
55 —59	35,214	37,226	72,440	1·73
Total.....	1,243,269	1,236,276	2,479,545	59·23

Adults in 1871.—In order to compare the above results, as nearly as can be done, with those of the census of 1871, it is necessary to form decennial groups from 20 upwards. As regards the prior stage, we can only put the figures for 12 to 20 in 1871 against those for 13 to 19 in 1881, which are periods too dissimilar for useful comparison.

1871.			1881.		
Age.	Total.	Percentage to total population.	Age.	Total.	Percentage to total population.
21—30	981,782	19·42	20—	795,042	18·99
—40	640,693	12·67	30—	652,291	15·58
—50	443,360	8·77	40—	407,552	9·73
—60	233,426	4·61	50—59	239,488	5·72
Total.....	2,299,261	45·48	...	2,094,373	50·03

It will be seen that the figures for 1871 include those aged 60 but not those aged 20, while the figures for 1881 take in those who are of the age 20 but not those of the age 60. The effect would be somewhat in favour of 1881. Yet even with this item on its side, the total for 1881 falls short by 200,000 of the total for 1871. But whereas the proportion which the latter bore to the entire population was only 45·48 per cent, the smaller total of 1881 bears the higher proportion of 50·03 per cent.

Comparison of those between 20 and 30.—The actual numbers are not very greatly divergent in the respective decennial stages except the first. This embraces for 1871 those of the age 21 to 30, and for 1881 those of the age 20 to

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

29, yet the latter shows a deficiency of 186,740. The decrease is thus distributed between the sexes :—

Year.	Age.	Males.	Females.
1871	21—30	477,997	503,785
1881	20—29	378,072	416,970
Decrease ...	...	99,925	86,815

Difference how accounted for.—The only conclusion I can draw from these figures is that there has been either great mortality or considerable emigration among the young of both sexes at this important age. And allowing that vast numbers of growing youths and pitiful young mothers who should have reached this age fell victims to want of due nourishment at the time of the famine, yet considering that this is the period at which the vital powers are perhaps the most capable of enduring privation, and when also the spirit of adventure is the strongest, there is room to hope that young Mysore at the time of the census was to a much larger extent than usual employed beyond the limits of the mother country.

The aged.—The population of those aged 60 years and upwards stands thus :—

Age.	Males.	Females.	Total.	Percentage to total population
60—	53,232	67,368	120,600	2·88
70—	15,985	19,895	35,880	0·85
80—	5,365	6,375	11,740	0·28
Total.....	74,582	93,638	168,220	4·01

The longevity of women seems from these figures to be greater than that of men. But, besides the proverbial uncertainty of natives as to their ages, there is no doubt a tendency to exaggerate the age when it passes beyond a certain limit. The only centenarian specially noted is a Daire woman at Channapatna, reported as 105 years old. She must therefore have been born in 1776, when Haidar Ali was at the zenith of his power.

Figures of 1871.—The Census of 1871 included those were actually 60 years old in the previous period, and among those above 60 no subsequent stages were recognized. The figures for all above 60 years of age were 52,953 males and 52,044 females, the total number of 104,997 being 2·07 per cent of the whole population. If these figures may rightly be compared with those of 1881 it would appear that, notwithstanding the severities of the intermediate famine, the past ten years had been specially favourable to longevity.

DISTRIBUTION OF THE POPULATION BY CASTES OR TRIBES.

FINAL CENSUS FORM VIII.

System adopted.—On the system of classification to be adopted under this head, the Census Commissioner intimated as follows on the 27th May 1881.

"It has been decided—

(1) that unless the Local Governments wish for special reasons to distinguish castes which number less than 100,000, no castes shall be separately classified which comprise fewer than 100,000 persons;

(2) that the castes shall be arranged—

I. Brahmans.
II. Rajputs.
III. Castes of good social position.
IV. Inferior castes.
V. Non-Hindus or Aboriginal Castes and Tribes.

If then the principle to be observed in dividing off classes III and IV is once determined, there will be little or no difficulty in preparing the Final Forms."

To this the Dewan sent the following reply, with copy of the Tabulation orders that had been issued by him on the 8th May 1881.

"With regard to the classification of castes—No. I, Brahmans, admits of no doubt. The aboriginal tribes, few as they are in numbers, are shown under class V. Class IV consists of what are well known outcastes in these parts, comprising the two distinct tribes of Holayas and Madigas.

Under class II have been placed, besides the Rajputs, the Vaishyas or trading classes and other miscellaneous superior castes who do not ordinarily live by hard labour and whom it has been considered convenient to group together for statistical purposes. All the rest of the population have been placed under class III, forming the great bulk of the non-Brahmanical or Sudra classes, and comprising the various agricultural tribes other than outcastes and the various classses of artisans. If it is considered that class II should strictly be restricted to Rajputs, of whom there are none in this Province, excepting a few Arasus or Rajbindes, all those now shown under class II will be added to class III, and class II will be left blank as regards this province. No alteration in the existing arrangements followed here will be necessary."

Eventually, by circular of the 7th December 1881, the Government of India dropped the distinction above directed between classes III and IV, and adopted the following as the main classification.

I. Brahmans.
II. Rajputs.
III. Other Hindu Castes.
IV. Non Hindu or Aboriginal Castes and Tribes.
V. Muhammadan Tribes.

Castes of over 100,000.—If the Report be confined to such castes or tribes as number 100,000 or over, the following will be the only ones calling for notice.

			Percentage on Total Population.
I.	Brahmans	162,652	3·88
III.	Other Hindu Castes—		
	Vakkaliga (farmers) ..	859,363	20·52
	Lingayits	470,269	11·23
	Kuruba (shepherds) ..	291,965	6·97
	Beda	171,269	4·09
	Golla (cowherds) ..	102,633	2·45
IV.	Non Hindu Castes—		
	Holaya	447,421	10·68
	Madiga	174,824	4·17
V.	Muhammadans—		
	*Sunnis	179,296	4·28
	Total ..	2,859,692	68·31

*This is of course a sectarian and not a tribal division.

This content downloaded from 171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

But since the following account, based on the tables as furnished to me, was compiled before I had seen the correspondence above referred to, it seems better to leave it unaltered, as being more serviceable for local purposes, while still supplying the information which alone the Government of India profess to require.

Castes of nearly 100,000.—It may however be added that the following further castes approach very near to 100,000 in numbers :—

		Percent to total population.
Telugu Banajiga	93,037	2·22
Panchala	91,423	2·18

The Banajiga, as the name indicates, are by origin traders and merchants, but they are now chiefly engaged in agriculture. The Panchala comprise the five guilds of superior artisans, composed of smiths, carpenters and masons, as described in a subsequent part of this Report.

Hindus.—The following then is a summary of the returns under the head of Hindus, including therein the outcastes, aborigines and vagrant tribes :—

Divisions.	Males.	Females.	Total.
I. Brahmans	81,888	80,764	162,652
II. Kshattriyas (Rajputs)	6,650	6,601	13,251
III. Other Hindu castes	1,540,209	1,558,479	3,098,688
IV. Outcastes, aboriginal and wandering tribe	339,067	342,678	681,745
Total.....	1,967,814	1,988,522	3,956,336

As all the castes and tribes have been fully described by me in the *Gazetteer of Mysore*, reference may be conveniently made to that work, and description in much detail is here rendered unnecessary.

Brahmans.—The Brahmans belong to one of three main sects—Smárta, Mádhva, or Srivaishnava. The total number in 1871 was 169,637 : hence Brahmans have suffered a decline of 4·11 per cent.

The instructions for tabulation provided for the classification of Brahmans primarily into these three religious sects of Smarta, Madhva and Srivaishnava, and subordinate to each of those heads into the ethnic divisions which embrace the local designations. But in only one District (Chitaldroog) has this double classification been attended to : in all the other Districts only the sectarian divisions have been noted, while in the Mysore Municipality these are discarded and only the ethnic divisions observed. Moreover with reference to the Srivaishnavas, while all the other Districts classify them under their particular sects, the Shimoga District notes only the major divisions of Vadagale and Tengale. Such irregularities have made it impossible to compile the statistics with absolute certainty on a uniform basis.

The following compares the strength of the three sects in the present and former Census :—

Year.	Smárta.		Mádhva.		Srivaishnava.	
	Number.	Percentage.	Number.	Percentage.	Number.	Percentage.
1871	114,823	67·7	36,625	21·6	18,189	10·7
1881	113,503	69·7	31,281	19·2	17,868	10·9
Decrease.....	1,320	1·1	5,344	14·5	321	1·7

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

It thus appears that while all three sects have lost in numbers, the Mádhva Brahmans have suffered a very considerable decrease. The percentage of Smartas to the whole Brahman population stands higher than it did in 1871: the Srivaishnavas, maintain nearly the same ratio as they did then.

The following figures by Districts will show the general distribution of the three sects:—

District.	Smárta.	Mádhva.	Srivaishnava.
Bangalore	17,620	5,897	2,792
Kolar	13,783	5,534	2,368
Tumkur	10,019	2,692	1,401
Mysore	21,425	6,693	4,890
Hassan	12,658	1,480	4,907
Shimoga	20,018	5,140	426
Kadur	14,366	976	662
Chitaldroog	5,614	2,869	422

The *Smárta*, or canonical legists, derive their name from *smriti*, the code of revealed or traditional law. They worship the triad of Brahma, Siva, and Vishnu under the mystic syllable OM, and while admitting them to be co-equal, exalt Siva as their chief deity. They are also called *advaitas*, non-dualists, as they believe in the pantheistic Vedánta doctrine that God and matter are identical, and that everything is but an atom of the divinity, they themselves being parts of the Supreme Being. The founder of the sect was Sankaráchári, the Hindu reformer of the 8th century, and their guru is the Sringeri Swámi, designated as the Jagat Guru. The distinctive marks of a Smarta Brahman are three horizontal lines of pounded sandalwood on the forehead, with a round red spot in the centre.

The *Mádhvas* are so called from the founder of the sect, Madhváchári, who arose in South Kanara in the 13th century. They worship both Vishnu and Siva, but more particularly the former. They are also called *dvaitas* or dualists, as they consider the Creator and the created to be distinct and their final absorption to be in the future. A Mádhva Brahman is known by a black perpendicular line from the junction of the eyebrows to the top of the forehead, with a dot in the centre.

The *Srivaishnavas* are worshippers of Vishnu as identified with his consort Lakshmí or Srí, whence their name. The founder of their sect was Rámánujáchári, who lived in the Chola and Mysore countries at the beginning of the 12th century, and after him they are also called Rámánujas in some parts of India. Their creed is the *visishtádvaita*, which differs from the advaita in attributing both form and qualities to the deity. In Mysore their guru is the Parakálaswámi of Melukote. The Srivaishnavas are known by a trident on the forehead, the centre line being yellow and the two outer ones white. The Tengale or southern branch distinguish themselves from the Vadagale or northern branch by continuing the central line of the trident in white for some distance down the nose. The distinction between these two branches arises from their dispute as to the precedence of certain ácháryas. About 400 years ago the question, it is said, was formulated by Vedanta Desikar on the side of the Vadagales and by Manavala Mahamuni on the side of the Tengales, and the dispute has placed a gulf between the two parties ever since.

Pancha Dravida.—These three sects embrace all the religious divisions of the Brahmans in Mysore, but a more ancient classification according to language or nationality extends to the whole caste of Brahmans throughout India. Under this system there are recognized 5 tribes in India north of the Krishna, called the Pancha Gauda, and 5 in southern India, called the Pancha Drávida. The following are their sub-divisions:—

Pancha Gauda.	*Pancha Drávida.*
Kányakubja (N. W. P.)	Karnátaka or Kannada.
Sárasvata (Panjab.)	A'ndhra or Telugu.
Gauda (Delhi and Bengal.)	Drávida or Tamil.
Maithila (Behar.)	Mahárashtra or Mahratta.
Utkala (Orissa.)	Gúrjara or Gujarati.

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

Subordinate to each of these ethnic tribes are a vast number of local sects, distinguished by names which are chiefly territorial or numerical in origin. Thus the returns of the Mysore Census exhibit 58 sub-divisions among Smárta Brahmans, 34 among Mádhvas and 21 among Srivaishnavas, besides all those represented by only a few members, which are classed together as "others." Some of the designations however are common to all three, some to Smártas and Mádhvas alone, and some to Srivaishnavas alone. The origin of many of the names appears to be unknown even to those who bear them, but I am told the various designations were determined and the relative privileges fixed in the time of Vidyáranya, also known as Sáyana, who was the principal instrument in the foundation of the Vijayanagar empire in the 14th century and its first prime minister.

Sects of over 5,000.—The prevailing sects, or those which exceed 5,000 in total numbers, are the following, arranged in numerical order under their respective languages:—

Designation.	Smártas.	Mádhvas.	Srivaishnavas.	Total.
Karnataka.				
Badaganád	12,461	4,783	7	17,251
Hoysala, Hoysaniga	14,235	1	...	14,236
Kamme, *viz.*, Babbúr, Uchu and Kannada Kamme ...	11,825	553	...	12,378
Havika, Haiga	9,022	...	...	9,022
Hale Karnátaka	5,421	3,189	...	8,610
Prathama Sákhe	4,008	1,394	...	5,402
Aravattu Vakkalu	764	4,602	28	5,394
Maharashtra.				
Déshasta	2,325	13,018	...	15,343
Andhra or Telugu.				
Murikinád	10,692	58	...	10,750

These nine tribes represent altogether 98,386 Brahmans, or more than three-fifths of the whole, and they are with a trifling exception all Smartas and Madhvas. The most numerous class of Srivaishnavas are the Hebbár, who number only 3,467. The above tribes are thus distributed over the Districts.

Name.	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.
Badaganad ...	4,853	2,322	3,106	2,612	584	1,780	255	1,739

All use subject to https://about.jstor.org/terms

The *Badaganád* Karnátaka Brahmans have had their origin in the northern (*badaga*) districts (*nád*) of the Karnátaka country. The *Hoysala* or *Hoysaniga* Karnátaka Brahmans, corrupted into Vaishaniga, are named from the Hoysala country or original territory of the Hoysala kings, whose capital was at Dorasamudra, the modern Halebid in the Hassan District. The *Babbúr* or *Bobbúr Kamme*, *Ulcha* or *Urcha Kamme*, and *Kannada Kamme* Brahmans would seem to be connected with the Kamme country, which, according to the old literature, formed part of the Vengi territories and was situated in the east of the present Mysore State, as it included Punganur.

The Babbur Kamme number 7,584 and are all Smartas: they preponderate in Hassan District, which contains one-third of them, and are numerous in Mysore and Kadur Districts. The Ulcha Kamme number 4,528, of whom 3,975 are Smartas and 553 Madhvas: Kolar District contains nearly a half of them, most of the remainder being in Tumkur and Bangalore Districts. The Kannada Kamme number only 266, all Smartas: they are chiefly in Mysore and Tumkur Districts.

The *Havika* or *Haiga* Brahmans are almost entirely confined to Shimoga District, and, as their name indicates, are immigrants from Haiga, which was the ancient designation of North Kanara. They are popularly classed as Tulu Brahmans. But according to tradition they are of northern origin, and were originally introduced by one of the Kadamba kings in the 3rd or 4th century from Ahichchhátra in Rohilkhand.

The *Hale Karnátaka* are chiefly confined to the Mysore District. An account of them is given in the *Mysore Gazetteer*, Vol. I, p. 341. With the *Prathama Sákhe* may be classed the *Sukla Yajus Sákhe*, who are returned as only 4 in number, all Mádhvas. They are observers, as the name indicates, of the white Yajur Veda.

The *Aravattu vakkalu* or "Sixty families" appear to have been originally members of the Aruvelu, noticed below, from whom they were selected as disciples by the guru of the Vyásaráya math during the time of the Anegundi princes.

The *Deshasta* are Mahratta Brahmans, and formerly monopolised a very large share of the offices in the public service. The common affix to their names is Ráo or Ráya.

The *Murikinád* are Telugu Brahmans, and with them may be classed the *Vilnád*, numbering 2,878, all Smartas except 7, who are Mádhvas, and the *Kásalnád*, numbering only 2, who are Smártas. They seem to derive their names from districts in the Northern Sarkars.

Sects of over 1000—Of the remaining tribes, those of strength over 1,000 are the following:—

Name.	Smartas.	Madhvas.	Srivaishnavas.	Total.
Karnataka.				
Sivalli	4,449	232	...	4,681
Siranád	3,187	178	...	3,365

Mandya „ ...	...	...	1,133	1,133
Hemmige „ ...	...	...	1,083	1,083

The *Sivalli*, *Kota*, *Sishyavarga*, *Panchagrama*, and *Kandavara* all come under the head of Tulu Brahmans, and are immigrants from South Kanara, the ancient Tuluva. They are almost confined to the Shimoga and Kadur Districts, and engage in agriculture and trade.

The Shimoga District report mentions the following 16 as classes of Brahmans who take a direct part in the cultivation of their lands:—Havika, Kota, Kandavara, Sivalli, Sishyavarga, Panchágrama, Kalaga, Saklespúrada, Somarka, Ativasa, Kuru Sivalli, Sahavasi, Kotesvara, Stanika, Byalanji, Sanketi. They are chiefly areca-nut gardeners, and mostly reside in the four Malnad taluqs of Ságar, Nagar, Sorab, and Kavaledúrga; but, the Sanketis are most numerous in the Shimoga taluq.

The *Síranád* are named from Sira in the Tumkur District, which was the seat of the Moghul Government in the south in the 17th century. They are most numerous in Tumkur District and then in Kolar and Bangalore Districts.

The *Uttarádi* or *Uttaráji* Karnataka appear to be an offshoot from the Aruvelu who became disciples of Sripáda Raya of Venkatagiri before the establishment of the Anegundi dynasty. They are most numerous in the Mysore and Tumkur Districts.

The *A'ruvélu* or "Six thousand" and the *A'ruvélu Niyógi*, that is those of the sect who are laukikas or devoted to secular callings, are of Telugu origin and generally distributed, but the largest numbers are in the Kolar, Bangalore and Mysore Districts. To the *Nanda Vaidika* or *Nandi Vaidika* the same remarks apply.

The *Sanketi* originally came from the Madura country. They are chiefly found in Hassan and Mysore Districts, at Kausika and Bettadapur: but a good number are also in Shimoga and Kadur Districts. An account of them will be found in the *Mysore Gazetteer*, vol: I, p 323.

The *Vadama*, with whom may be taken the *Bruhachcharana*, numbering 978, all Smartas, and the *Drávida*, counting 107 Smartas and 3 Madhvas, are mostly immigrants from the Tamil country, and in some of their customs resemble the Srivaishnavas.

The *Helbár* Srivaishnavas are the most numerous division of that sect. They are descendants of immigrants from Srirangam, Conjeveram and other parts of Southern India who settled in 5 places called the pancha gráma, namely, Kadaba (Tumkur District), Grama (Hassan District), Patna (Seringapatam), Molur (Bangalore District), from which 51 have returned themselves separately by that name, and Belur (Hassan District). They have acquired a good deal of influence by means of office in the public service. Half the number are in Hassan District and the remainder generally distributed. The common affix to Srivaishnava names is Aiyangár or A'chári.

The *Mandya* Srivaishnavas originally came from Mandyam near Tirupati, whose name they gave to their principal place of settlement in Mysore. Besides this place they reside at Melukote. They are mostly found in Hassan and Mysore Districts.

The *Hemmige* Srivaishnavas are so called from a village on the Kaveri near Talkad in Mysore District, which was given as a reward by the king of that time to one of their ancestors for distinguishing himself in a literary discussion. They are most numerous in Mysore and Hassan Districts.

Smaller Sects.—For the principal remaining sects it may be sufficient to give their names and strength.

The *Sivadvija* are priests in Saiva temples, and the *Vaikhánasa* similarly in Vaishnava temples. Both are on that account held in low esteem, and the other sects will have no social intercourse with either.

There are 664 *Konkani* Brahmans, all Madhvas; and *Gujarati* Brahmans are represented by 5 Smartas and 5 Madhvas.

Pancha Gauda.—Of the Pancha Gauda Brahmans the principal representatives are the following :—

	Smarta.	Madhva.	Srivaishnava.	Total.
Gauda	990	...	4	994
Sárasvata	474	4	...	478

The *Gauda* Brahmans properly belong either to Hariana and the country round Delhi, or to the central parts of Bengal. They are supposed to have sprung at some remote period from the *Kányakubja* or *Kanaujiya* stock. In this province they are found chiefly in the Mysore District, also in Bangalore and Shimoga Districts, but there are some in all Districts. The *Sárasvata* Brahmans derive their name from the ancient river Sarasvati, now dry, in the Panjab. They are almost confined to the Shimoga and Kadur Districts.

Kshattriyas.—The Kshattriyas include *Arasus*, *Rájbinde* or *Rájpinde*, to the number of 5,266, and *Rájputs* or others to the number of 7,985. The former have increased since 1871 by 14·94 per cent, while the latter have declined by 9·48 per cent. *Arasus* are relations or connections of the royal family of Mysore, and the great majority, or 3,745, are found in the Mysore District. The *Rájputs* are descendants of immigrants from Rajputana and Northern Hindustan.

Other Hindu Castes.—Under other Hindu Castes the following groups have been formed :—

Vaisyas or other Superior Castes.

	Males.	Females.	Total.
Jains ..	5,546	5,214	10,760
Trading classes ..	17,597	16,331	33,928

Jains.—The Jains, though Hindus by nationality, are not Hindus by religion : for although they may have somewhat in common, the Jains are followers of a distinct faith, historically separate from and even an object of hostility to that termed Hinduism, as directed and controlled by Brahmans. Indeed, the Jains may be held to have more affinity to Buddhism than to Hinduism, and are certainly not to be identified with either of those systems. The discovery of the Jains as a separate religious sect, although they are found in many parts of India,* was first made in Mysore; and is due to Colonel Colin Mackenzie, who was engaged in the survey of this State at the beginning of the present century. The origin of the sect, though it has been the subject of much research, is still a matter of doubt. But that it dates back to a period as ancient as that of the rise of Buddhism, if not farther, is abundantly testified. The Jains were not only in the ascendant in Mysore in political affairs for a long period down to the middle ages, but to them is due the earliest cultivation of the South

Indian languages and all the early literature of Karnataka. Though now reduced to a position of comparative insignificance, they cannot be regarded save with much interest, as the representatives of a once dominant and enlightened religious community. The number of Jains in 1871 was 13,035, while in 1881 it is 10,760, showing a loss at the rate of 17·45 per cent. They are principally engaged in trade and agriculture, and are workers in brass. More than a third of the whole belong to Shimoga District. The principal seats of their religion in this State are at Sravana Belgola in Hassan District, Maliyur in Mysore District, and Humcha in Shimoga District. At the first is their gigantic stone image of Gomatesvara, 60 feet high, on the summit of a hill. Of the two divisions of Jains—the *Svetámbara* or those clad in white, and the *Digambara* or those clad with space, that is nude—the Jains of Mysore belong to the latter. But only the yatis or priests, as distinguished from the sravaka or laity, are expected to conform to the principle in its strictness, and even they cover themselves with an ochre-dyed sheet except at meals, when they cast off all raiment.

Trading classes.—In the Trading classes are included the *Kómatis* and the *Nagartas*. The *Komatis* lay exclusive claim to rank as Vaisyas. Their numbers have fallen from 28,345 in 1871 to 25,985 in 1881, or at the rate of 8·32 per cent. They are most numerous in the Kolar and Bangalore Districts, which contain nearly half the whole number. The *Nagartas* call themselves Vaisyas, though the claim is disallowed by both the Brahmans and the Komatis. They have fallen from 8,681 in 1871 to 7,943 in 1881, a loss of 8·5 per cent. Nearly the whole are settled in Bangalore and Kolar Districts. There are none in Shimoga District.

Miscellaneous classes.—The group Miscellaneous includes a somewhat heterogenous collection; but they may be comprehensively arranged as religious mendicants, athletes, artistes, and people of foreign origin.

The *Sátáni*, *Dásari* and *Bairági* may all be described as Vaishnava mendicants and devotees. The *Sátáni*, followers of Chaitanya, are regarded as priests by the Holayas and inferior castes. They are mostly engaged in temple service as flower gatherers and torchbearers: they are also strolling minstrels specially devoted to the praise of Krishna. The *Dásari* are *dásas*, or servants of God, under a vow made by themselves or their relatives at some critical moment. The *Bairági*, followers of Rámánand, are by profession ascetics, who resort to holy places as pilgrims, and also do a little practice in medicine and alchemy. The numbers of these sects were not separately given in 1871. But in 1881 the Sátáni were 16,873, the Dásari 693, and the Bairági 277. One half of the Sátáni are in Hassan and Bangalore Districts: of the Dasári two-thirds are in Kolar District: and of the Bairági the majority are in Bangalore and Kolar Districts.

The *Ráchevár* number 4,416, of whom a fifth are in Mysore District, and nearly as many in Kadur District. They claim to be of royal connection and in some parts are called *bada arasa makkalu*, poor king's children. In former days they were principally engaged in military service.

Of the castes which follow, the *Jetti*, *Chitragár*, *Sáligeya* and *Rangáre* are connected with the Ráchevár and in 1871 were included as sub-divisions of them. They may be regarded as castes which have originated in ministering to the display or luxury of the royal court.

The *Jetti* are professional athletes and number 1,440, nearly a half of whom are in Mysore District, and a large number in Bangalore District. In former times they were sometimes employed as executioners, and despatched their victim by a twist of the neck. They are still considered skilful in setting dislocated joints. Colonel Wilks gives the following graphic description of them under the old regime:—

"Mysore, I believe, is the only country in the south of India in which the institution of the athletæ (Jetti) has been preserved on its ancient footing. These persons constitute a distinct caste, trained from their infancy in daily exercises for the express purpose of exhibitions; and perhaps the whole world does not produce more perfect forms than those which are exhibited at these interesting but cruel sports. The combatants, clad in a single garment of light orange-coloured drawers extending half-way down the thigh, have their right hand furnished with a weapon, which, for want of a more appropriate term, I shall name a

All use subject to https://about.jstor.org/terms

cæstus, although different from the Roman instrument of that name. It is composed of buffalo horn, fitted to the hand, and pointed with four knobs, resembling very sharp knuckles, and corresponding to their situation, with a fifth of greater prominence at the end nearest the little finger, and at right angles with the other four. This instrument, properly placed, would enable a man of ordinary strength to cleave open the head of his adversary at a blow: but the fingers being introduced through the weapon, it is fastened across them at an equal distance between the first and second lower joints, in a situation, it will be observed, which does not admit of attempting a severe blow, without the risk of dislocating the first joints of all the fingers.

Thus armed, and adorned with garlands of flowers, the successive pairs of combatants, previously matched by the masters of the feast, are led into the arena; their names and abodes are proclaimed; and after making their prostrations, first to the Raja seated on his ivory throne in a balcony which overlooks the arena, and then to the lattices behind which the ladies of the court are seated, they proceed to the combat, first divesting themselves of the garlands and strewing the flowers gracefully over the arena.

The combat is a mixture of wrestling and boxing, if the latter may be so named: the head is the exclusive object permitted to be struck. The guards for defence, though skilful, are not numerous, the blows are mere cuts inflicted by the cæstus; and before the end of the contest, both of the combatants may frequently be observed streaming with blood from the crown of the head down to the sand of the arena. The wrestling is truly admirable; and the exertions of the combatants to disengage themselves from unfavorable positions, in which the head would be exposed to the cæstus, are, as mere specimens of activity, not exceeded by any corresponding exhibition on a European stage.

When victory seems to have declared itself, or the contest is too severely maintained, the moderators in attendance on the Raja in the balcony make a signal for its cessation, by throwing down turbans and robes, to be presented to the combatants, who before retiring repeat their prostrations to the Raja and the lattices. A wistful look towards the balcony is the usual symptom of acknowledged inferiority, or of being, in the phrase of English pugilists, not game, and the victor frequently goes off the arena in four or five somersaults, to denote that he retires fresh from the contest. A pair of fresh combatants is introduced with the same forms, and of such pairs about two hundred are exhibited during the nine days of the great Dasara festival.

The Jetti of Mysore are divided into five classes, and the ordinary prize of victory is promotion to a higher class. There are distinct rewards for those of the first class, and in their old age they are promoted to be masters of the feast.

These customs are still maintained, except that the public exhibitions are confined to wrestling, the use of the weapon which Wilks describes as a *cæstus* being reserved for occasions when the sight of blood forms no drawback to the pleasure of the spectators.

The *Bhattaráju* or *Bháts* are of Telugu origin. Their former functions are thus described by Wilks.

The name is a curious approximation to that of the western *bard*, and their offices are nearly similar. No Hindu Raja is without his *bháts*. Haidar, although not a Hindu, delighted to be constantly preceded by them, and they are an appendage to the state of many other Musalman chiefs. They have a wonderful facility in speaking *improvisatore* on any subject proposed to them, a declamation in measures, which may be considered as a sort of medium between blank verse and modulated prose. But their proper profession is that of chaunting the exploi's of former days in front of the troops while marshalling for battle and inciting them to emulate the glory of their ancestors.

Now, from want of their ordinary employment, they have descended into the mendicant class. They number 1320, of whom a half are in Bangalore and Kolar Districts. They are fewest in Shimoga and Kadur Districts, where there are only 7 and 18 respectively.

The *Chittragár*, *Rangáre* and *Sáligeya* may be taken together. The *Chittragár* are painters and decorators, who make trunks and palanquins, and paint pictures of the Hindu deities: they are also gilders and book binders. They number 1422, and are most numerous in Mysore, Shimoga and Chitaldroog Districts. The *Rangáre* are calico printers and dyers. They number 3498, of whom nearly a half are in Shimoga District, and a considerable number in Mysore District. The *Sáligeya* number only 430, nearly all in Bangalore. They are makers of gold and silver lace.

The people of foreign origin are those in the margin, arranged according to numbers. Many of the names explain themselves. The *Mahrattas*, or *Are* as they are also called, are descendants of immigrants who entered the country when the power of their nation was in the ascendant. They once formed a most important element of the population of Mysore, which was repeatedly swept over by the incursions of their countless horsemen. One third of them are in Shimoga District, which is contiguous to the Mahratta country, and they are also numerous in Bangalore and Mysore Districts. In 1871 their number was 41,778,

and to 1881 they suffered a loss of only 1·29 per cent. The *Mudaliár* and *Pille* are of Tamil origin, the offspring of traders, servants and contractors who followed the progress of British arms, and settled chiefly in the Cantonment of Bangalore. More than two thirds are in this District. From 1871 to 1881, while most classes have declined in numbers, they have increased from 8,985 to 10,002. They are a thriving and money-making class, and pay special attention to the education of their females. The *Ládar* are traders from the Mahratta country, principally settled in the Mysore District. They have fallen from 1623 in 1871 to 1415 in 1881, or 12·8 per cent. The *Naidu* are of Telugu origin, mostly located in Bangalore, engaged in Government service and trade. There are none in Hassan and Kadur Districts. The *Gósáyi* are a quasi masonic fraternity from Northern India, generally wealthy merchants, trading in jewels and valuable embroidered cloths. They are principally settled at Mysore, Seringapatam and Bangalore. The *Márváḍi*, *Gujaráti*, and *Múltáni* are all traders from the countries after whose names they are called. The *Marvadi* deal in pearls and cloths: the *Gujaratis* are small money lenders and also trade in jewels, cloths and other articles. The Gujarati have fallen from 154 to 82 in the 10 years: they are nearly all in Mysore. The Marvadi and Multani have increased from 180 and 26 to 235 and 33. The Márvádi are chiefly in Bangalore and Shimoga; there are none in Mysore. The Multáni are all in Bangalore, except a few in Mysore. The *Coorgs* are chiefly youths who have come to Bangalore for their education: there are also a few in Mysore and Hassan. The *Malayáli* are people from Malabar, probably travellers. None were registered in 1871.

Agricultural Classes.—Among the Agricultural classes are included the following 17, arranged according to numerical order :—

Vakkaliga	859,363
Lingáyits	470,269
Kuruba	291,965
Beda	171,269
Golla	102,633
Telugu Banajiga	93,037
Uppára	84,583
Kunchiga	82,474
Vadda	75,840
Námadhári or Malaya	66,386
Besta	65,826
Toreya	63,597
Hale Paika	63,246
Reddi	54,593
Tigala	44,283
Idiga	21,161
Kamma	7,663

Lingayits are placed at the head of the Agricultural class, but they are also largely engaged as traders and form a very important feature of the population. Their divisions as given in the returns are noted in the margin. The *Lingáyits* or *Sivachárs* are followers of a sect which arose on the downfall of the Jains in the 12th century, and which received its principal development in the Kannada speaking countries. Its founder was Basava, the prime minister of the Kalachurya king Bijjala of Kalyana, whose rule extended over the northern parts of Mysore. Basava was an A'rádhya Brahman, but he refused to wear the Brahmanical thread, and rejected the authority of the Vedas and the Brahmans, together with the observances of caste, pilgrimage and penance. The Lingáyits are distinguished by the wearing on the person of a portable or *jangama* linga which consists of a small black stone, enshrined in a silver box of peculiar shape, suspended from the neck or tied round the arm. They are bigotted adherents to the tenets of their sect. The Lingáyit faith was the state religion of the Wodeyars of Mysore till 1610, and of the Nayaks of Bednur till 1763. The *A'rádhyas* are a sect of Lingáyit Brahmans. The *Ayyas* are the Lingáyit priests and schoolmasters, the former being often designated as Vadér-

A'rádhya	5,912
Ayya	33,932
Sivachár Gauda	259,110
„ Banajiga	83,813
„ Gauliga	6,681
Other Lingáyits	80,821

This content downloaded from

All use subject to https://about.jstor.org/terms

a corruption of Wodeyar, lord or master. So far as can be gathered from the Census Reports the following are the numbers and distribution of the Lingáyits:—

Mysore	470,269
Bombay	369,004
Nizam's Dominions	125,331
Madras	117,616
Coorg	35,000
Berar	20,338
Total....	1,137,558

But these figures perhaps understate their real numbers, as there has always been confusion in the census notation in distinguishing between Lingáyits as a caste and Lingáyits as a sect of religious dissenters, under their various names of *Jangama*, *Lingadhári*, *Lingaranta*, *Siráchár*, &c.

Vakkaliga.—The *Vakkaliga*, to which the great body of the ryots belong, have been returned under the heads in the margin. The total number has fallen from 1,190,949 in 1871 to 859,368 in 1881, or 27·83 per cent. The *Gangadikára Vakkaliga* are representatives of the subjects of the great province of Gangavádi, called a Ninety-six Thousand country, perhaps on account of its being divided into 96 nádu, which occupied the whole of the south of Mysore as determined from ancient inscriptions. The people of that province were properly called Gangavádikára, which term was gradually abbreviated into Gangadikára. Three fourths of this tribe are in the Hassan and Mysore Districts, and they are also numerous in Bangalore and Tumkur Districts, but in Kolár and Chitaldroog are hardly represented at all. The *Nonaba Vakkaliga* are similarly the representatives of the old province of Nonambawádi or Nolambavádi, a Thirty-two Thousand country, which occupied the Chitaldroog District and south western parts of Bellary. Nearly half the Nonaba Vakkaliga are now within the limits of the Kadur District, and also large numbers in Shimoga and Tumkur. Bangalore, Kolár and Mysore have scarcely any. The *Morasu Vakkaliga* are descendants of immigrants from a district apparently called Morasa nád, in the neighbourhood of Conjeveram, who settled in the country about Nandidroog. All but 1000 are found in the Kolar and Bangalore Districts. The *Hálu Vakkaliga* are most numerous in Kadur and Hassan Districts, which contain fifteen sixteenths of the whole. They combine the keeping of cows or buffaloes and sale of milk (*hálu*) with other agricultural pursuits. Of the *Sádar Vakkaliga* more than a half belong to Shimoga District, and a large number to Kadur District. They appear to have been originally Jains.

Gangadikára Vakkaliga		457,515
Nonaba	„	55,259
Morasa	„	126,168
Hálu	„	32,472
Sádar	„	96,437
Other Vakkaliga		111,732

The *Kuruba* present the divisions given in the margin. They number 291,965 in 1881 against 371,317 in 1871, a loss of 21·37 per cent. They form the great shepherd class, which according to tradition ruled over large tracts of country in the south of India in the earliest historical times. The *Hálu Kuruba* are professional herdsmen, the *Handi Kuruba* are swine-herds, the *Kambli Kuruba* are engaged in the manufacture of woollen blankets and camblets, some of which are of remarkable fineness and proportionately expensive. Of the Hálu Kuruba more than a third are in the Mysore District. The Kambli Kuruba are most numerous in Kolar and Tumkur Districts, which contain half of the whole.

Hálu Kuruba		225,282
Handi	„	17,413
Kambli	„	49,270

The *Béda* have been reduced from 262,101 in 1871 to 171,269 in 1881, or 34·65 per cent. They were in former days hunters and soldiers: most of the Palegars in Mysore were of this caste, and some of the best troops under Haidar and Tipu were Bedas. They preponderate in the Chitaldroog District, and are also numerous throughout the east and north. They are to a great extent of Telugu descent.

The *Golla* are properly cowherds and dairymen. They were 160,015 strong in 1871 against 102,033 in 1881, a loss of 35·86 per cent. They are of two classes, the *Uru* or town Golla and the *Kádu* or forest Golla. They were formerly largely employed in conveying money, both public and private, from one part of the country to another, and were proverbial for their trustworthiness. The Uru Golla are mostly settled in Bangalore and Kolar Districts: the Kádu Golla are nearly all in Chitaldroog and Tumkur Districts.

Uru Golla		57,916
Kádu	„	44,717

The *Telugu Banajiga* show in their name the country of their origin. Their proper calling was doubtless trade, but they are largely engaged in agriculture. One third of the number are in Kolar District, and nearly as many in Bangalore District. Mysore District also has a considerable number.

The *Uppára* are properly salt-makers, but are now mostly engaged in agriculture. Nearly half the number belong to Mysore District, and for the rest they are most numerous in Kadur, Chitaldroog and Shimoga Districts. They were 92,036 in 1871 against 84,583 in 1881, this having lost more than 8 per cent.

The *Kunchiga* are most numerous in Tumkur and Chitaldroog Districts, also in Shimoga District.

The *Vadda* are stone-masons and well-diggers, and were originally immigrants from Orissa and the Telugu country. They are of two classes, the *Kallu* or stone Vadda, and the *Mannu* or earth Vadda. The former are most numerous in Kolar District, the latter in Shimoga and Bangalore Districts, also Kolar. The total number has been reduced from 115,766 in 1871 to 75,840 in 1881, or 34 per cent.

Kallu Vadda	32,925
Mannu „	42,915

The *Náyakára* or *Málara* were included in the last census as a sub-division of the Banajiga. They are principally found in the Shimoga, Kadur and Hassan Districts.

The *Besta* are properly fishermen, and also palanquin bearers, an occupation now almost gone out. Nearly a third of the number are in Tumkur District and a large number in Shimoga District. Their numbers seem to have fallen from 134,247 in 1871 to 65,826 in 1881, but the former figures also included the Toreya, who number 63,597 in 1881.

The *Toreya* are properly boatmen or ferrymen, and are closely allied to the Besta. They are almost confined to the Mysore District, which contains all but about 600, and these are in Hassan District. They are engaged in the wet cultivation fed by the numerous river channels of those parts.

The *Halepaika* are characteristic of the Shimoga District, which contains more than five sixths of the whole number, most of the rest being in Kadur and Hassan. They are properly toddy drawers, and formerly were distinguished as soldiers under the local chieftains.

The *Reddi* are most numerous in Bangalore and Kolar Districts, which contain five sixths of the whole number. Of the remaining Districts, Chitaldroog has the most. The Raddi or Reddi are to a great extent of Telugu origin.

The *Tigala* are of Tamil origin. More than half of them are settled in Bangalore District, and a fourth in Tumkur District. They are skilful market gardeners. Their numbers have been reduced from 55,043 in 1871 to 44,283 in 1881, or nearly 11 per cent.

The *Idiga* are a class of toddy drawers. They are most numerous in Mysore District, but also abound in Tumkur, Chitaldroog and Hassan Districts. They were 80,715 in 1871 and 21,161 in 1881, but in the former numbers were included the Halepaika, who are 63,246 in 1881. Hence this class has escaped the decimation which has fallen on most others in consequence of the famine.

The *Komma* are principally found in Chitaldroog District, while Bangalore and Kolar Districts also contain a good number.

Artisans.—The Artisan classes are returned under 15 heads as follows, arranged in numerical order.

Pánchála	91,423
Dévánga	43,427
Agasa	69,928
Hajám	30,376
Kumbára	31,269
Gániga	29,449
Myáda	12,585

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

Togata	11,243
Jáda	10,426
Padmasáli	7,052
Darji	5,991
Patvega	3,878
Góniga	1,531
Jamkhánadava	306
Others	2,185

The *Pánchála* comprise five classes of superior handicraftsmen, namely:—

Agasála or goldsmiths.
Bógára or Kanchugára, brass and copper-smiths.
Kammár or Lóhár, iron and black smiths.
Badagi, carpenters.
Kallu Kutaga, stone cutters.

They are generally distributed, but preponderate in Mysore District, and are also numerous in Shimoga, Hassan and Bangalore Districts. Their numbers have fallen from 103,911 in 1871 to 91,423 in 1881, or 12 per cent.

The *Dévánga* form the great weaver class, whose calling, dependent on the hand-loom, has been to a great extent superseded by the extensive importation of the cheaper machine-woven stuffs of England, Europe and America. A large number are Lingáyits in religion. Nearly a fourth of the whole belong to Bangalore District. There are also large numbers in Kadur, Hassan and Mysore Districts.

The *Agasa* are washermen; they form recognized members of the village corporation, and besides washing, supply torches, which it is a part of their duty to bear in public processions before the gods or high officers. They are, as may be expected, generally distributed, but abound in Mysore and Shimoga Districts. They have diminished in numbers from 86,971 in 1871 to 69,928 in 1881, or 19·82 per cent.

The *Hajám* or barbers, also called *Náyinda*, are likewise members of the village corporation, and are generally employed as musicians as well as in hair cutting and shaving. They prevail most in the Kolar, Bangalore and Mysore Districts. They were 39,632 in 1871 against 30,376 in 1881, a loss of 23·35 per cent.

The *Kumbára* are potters, and also dyers in indigo. About one-third of the number are in Mysore District, and the remainder are pretty equally distributed except in Chitaldroog District, which has the smallest number. Their total was 34,565 in 1871 and is 31,269 in 1881; they have thus lost 9·53 per cent.

The *Gániga* are oil-pressers and oil-mongers. More than a third belong to Mysore District, and a large number to Bangalore and Kolar Districts. In the northern and north-western districts they are few. In 1871 their numbers were 35,092, reduced in 1881 to 29,449, or more than 16 per cent.

The *Myáda* appear in the Census returns of 1871 under the Komatis or traders. They are most numerous in Mysore, Shimoga and Bangalore Districts.

The *Togata* were included in 1871 among the weavers. Nearly half the number are in Bangalore District, and the majority of the remainder in Kolar and Chitaldroog Districts.

The *Jáda* likewise went among the weavers in 1871. Half of them are settled in Hassan District, and most of the others in Shimoga and Kadur Districts.

The *Padmasáli* are also a class of weavers, and so returned in 1871. They are said to be of Telugu origin. They abound most in Bangalore, Kolar and Chitaldroog Districts.

The *Darjis* are tailors, and also calico printers. They are of Mahratta origin. Half the number are settled in Bangalore District, and the rest pretty equally distributed, except that Shimoga District has the largest number. In 1871 they were 9,556 strong, but in 1881 only 5,991; they have thus been reduced 37·3 per cent.

The *Patvega* are silk weavers, also Mahratta by origin. They are nearly all in Bangalore District and some in Chitaldroog District.

All use subject to https://about.jstor.org/terms

The *Góniga* are sack-weavers and makers of gunny bags. The greater number are in Bangalore and Tumkur Districts. They have fallen from 1837 in 1871 to 1,531 in 1881, a loss of 16·65 per cent.

The *Jamkhánadava* are carpet makers. They are also called *Paṭṭúlvála*, and a few engage in cotton and silk weaving. They are said to be immigrants from the Madras Presidency.

Non-Hindu tribes and castes.—The non-Hindu tribes and castes are thus returned.

	Male.	Female.	Total.
Outcastes	308,323	313,922	622,245
Wandering tribes ..	27,861	25,921	53,782
Aboriginal tribes ..	2,883	2,835	5,718
	339,067	342,678	681,745

The *Outcastes* are composed of the *Holiya* and the *Mádiga*, the former the lowest division of the Balágai or right hand faction; the latter the lowest of the Yedagai or left hand faction. They are returned as of the strength noted in the margin. The *Holaya* outnumber the Mádiga in the proportion of about 2½ to 1. One-third of the Holaya belong to Mysore District and they also abound in Hassan, Bangalore and Kadur Districts. The *Mádiga* are most numerous where the Holaya are fewest, namely in Chitaldroog, Tumkur and Kolar Districts. There are also large numbers in Bangalore District. Both Holeya and Madiga are considered unclean by the four orthodox castes, and all contact with them avoided. A Holeya having to deliver any thing to a Brahman places it on the ground and retires to a distance; when meeting in a street or road, the Holeya moves as far as possible away from the path of his superior. The Mádiga are leather-dressers, an occupation in which the Holeyas seem not to engage. The outcaste population, which numbered 813,975 in 1871, had fallen in 1881 to 622,245, or 23·55 per cent.

Holaya or Holeya...		447,421
Mádiga	...	174,824

The *Wandering tribes* include those noted in the margin. The total number has fallen from 72,484 in 1871 to 53,782 in 1881, or 25·8 per cent. The Lambáni, also called Brinjári, are a gypsy tribe, probably immigrants originally from Rajputana or some part of northern India, and speak a dialect of Hindustani. They are most numerous in Shimoga and Kadur Districts. They are principally engaged in transporting grain and other produce by means of large herds of pack bullocks, especially in the hilly and forest tracts where there are few good roads. During the Mahratta and Mysore wars they rendered valuable service in conveying supplies for the troops. The women are distinguished by a curious and picturesque dress, completely different from that worn by any other class. It consists principally of a tartan petticoat, and a shawl or mantle, often elaborately embroidered, which covers the head and upper part of the body. The hair is worn in ringlets or plaits hanging down each side of the face, decorated with small shells and terminating in tassels. The arms and ankles are profusely covered with trinkets made of bone, brass and other rude materials.

Lambáni	...	31,412
Koracha	...	11,864
Jógi	...	5,828
Domba	...	2,787
Others	...	1,861

The *Koracha* are also most numerous in Shimoga District, but abound in Kadur, Bangalore and Kolar Districts. They have suffered great diminution since the last census, the returns being 36,652 in 1871 against only 11,864 in 1881, or 67·63 per cent, no doubt due to migration out of the country. They are thieves and robbers from childhood, and wander about with large droves of cattle and asses, carrying salt and grain from one market to another. They carry with them the frame-work of a rude description of hut, and while one part of the tribe proceeds with the baggage animals, the others settle for a time in some convenient spot, where they erect their huts and employ themselves in making mats and baskets, begging and stealing until their proximity becomes a nuisance to the villagers and they are compelled to move on. They are constantly associated with Brinjáris and other wanderers in burglaries, dacoities and acts of violence, and often escape detection owing to their complete arrangements for obtaining information. They speak Telugu and Tamil, but are said to have a peculiar gypsy language of their own, and a system of signals which enables them to converse with the initiated unobserved. The men tie up their hair in a large bunch or chignon on one side of the top of the head. The women wear an immense number of strings of small white and red beads and shells round the neck and falling over the bosom.

All use subject to https://about.jstor.org/terms

Jóyis are mendicant devotees from all parts of India, recruited from all castes. They pretend to be fortune tellers. Nearly a half the number at the time of the census were in Shimoga District.

The *Domba* are wandering beggars, who make a living as tumblers, snake-charmers, &c. They speak a language allied to Hindustani and are supposed to be descended from some tribe of Northern India, such as the Doms.

The *Wild* or *Aboriginal tribes* number 5,718, and include the classes shown in the margin. Nearly all are confined to the Mysore District, where they are found among the hill ranges to the south, but the Iraliga are most numerous in Bangalore District.

Iraliga	1,229
Sóliga	1,596
Bettada Kuruba ...	2,893

The *Iraliga*, who numbered 6,363 in 1871 are in 1881 returned at 1,229, and Hassan District which then contained 3,602 now has none at all. These results throw doubt on the accuracy of the census as regards these tribes. The *Sóliga* on the other hand, have increased from 1,069 in 1871 to 1,596 in 1881. They are chiefly found in the Bilikalrangan hills on the south-eastern frontier of Mysore, where there are no other inhabitants but themselves and wild animals. They live in small communities of 6 or 7 huts in the dense parts of the forests, and cultivate with the hoe small patches of ground, where they grow a coarse kind of plantain, vegetables and a little ragi; on these, together with edible roots and the flesh of any animals they may capture, they subsist. They avoid strangers as much as possible, and seldom visit the low country unless when they have occasion to procure supplies, when one of their number is sent off to the nearest village to purchase whatever is required for the whole community. Owing to their keenness of sight, and skill in tracking animals, they are invaluable aids to any sportsman who visits the hills in search of game. The Sóliga are supposed to be an aboriginal race, and speak Hale Kannada.

The *Bettada Kuruba* or Hill Kuruba, also called Kádu or wild Kuruba, are met with chiefly in the forests along the south-western boundary of Mysore and among the hills at the foot of the Nilgiri range. They live in small rudely built villages called *hádis*, and earn a livelihood by felling timber, at which they are very expert. Of late years a good many of them have sought employment as labourers on the neighbouring coffee estates. They are a diminutive race, the men being about 5 feet 2 inches in height but they are very active and capable of enduring great fatigue. A sub-division called Jénu or honey Kuruba engage in collecting honey and bees' wax. They are said to be inferior to the Betta Kuruba and darker in colour. These tribes have increased from 2,066 in 1871 to 2,893 in 1881, or 28½ per cent. All but a small number belong to the Mysore District.

Muhammadans.—Muhammadans have been returned under 10 heads, as in the margin—

Sunni	179,226
Shiah	4,248
Wahhábi	516
Daire or Mahdavi	3,777
Maiman	740
Pindári	5,055
Labbe	4,656
Mápille	385
Others	1,678
Kandaháris and foreigners	133

This classification is defective, inasmuch as it confounds together sectarian and national distinctions, and fails to show the religious sect of those put under the latter heads. So far as they are separately returned, the Sunnis form 89·43 and the Shiahs 2·11 per cent of the Muhammadan population.

The *Sunnis* are so called from *sunnat*, the customs and traditions of the faith, of which they profess to be the orthodox followers. More than one-fourth of the number reported are in Bangalore District, nearly another fifth in Mysore District, and a sixth in Shimoga District. In the other Districts they are not so numerous, the largest number being in Kolar District.

The *Shiahs* are dissenters who reject the claims, admitted by the Sunnis, of the three Khalifs that succeeded the prophet, and recognize Ali, the fourth Khalif, the

This content downloaded from

All use subject to https://about.jstor.org/terms

husband of the prophet's daughter Fatima, as the true Imám. To the Muhammadan formula of faith they accordingly add the words, "Ali is the Khalif of God." The Shiahs are likewise most numerous in Bangalore and Mysore Districts. In the former the return is remarkable for the exact equality of the sexes, 595 of each, the correctness of which is open to question.

The *Wahhábis* are named after the founder of the sect, who arose in Arabia at the beginning of the last century. They profess to be puritans in religion, and condemn most of the customs and observances which have come to be reckoned as orthodox among Musalmans. They look for the coming of the Mahdi, whose advent will usher in the millennium of Islam and hold themselves bound to war against all infidels. Their numbers as reported in the census tables have risen from 141 in 1871 to 516 in 1881, counting in the latter only those separately returned as such. Nearly a half the number are in the Hassan District. There are scarcely any in Shimoga, Kadur and Chitaldroog Districts.

The *Daire* or *Mahdavi* are a sect peculiar to Mysore, principally settled at Channapatna in the Bangalore District and at Bannur and Kirigával in the Mysore District. Their belief is that the Mahdi has already appeared, in the person of one Saiyid Ahmed who arose in Gujarat about 400 years ago claiming to be such. He obtained many followers and settled in Haidarabad, from which however, on being worsted in a great religious controversy, they were driven out, and then found an abode at Channapatna. They have a separate mosque of their own. Their priest, it is said, concludes prayers with the words "the Imám Mahdi has come and gone," to which the worshippers respond "true we admit," both then unite in repeating "whoso doth not believe this is an infidel." They do not intermarry with the rest of the Muhammadans. Their numbers were returned in 1871 as 1377, while in 1881 they have grown to 3777, a most notable increase, the cause of which does not appear. Possibly the returns of 1871 did not give their strength fully. As pointed out in another part of this Report, there is a great disproportion of the sexes among them, the males being 1437 and the females 2340. The Daires carry on an active trade with the Western Coast.

The *Maiman* are immigrants from Cutch, principally found in Bangalore District, which contains two-thirds of the number, and in Mysore District. They were not separately shown in the census report of 1871. By origin they appear to have been Rajputs, and as Muhammadans are Sunnis.

The *Pindáris* were perhaps Mahrattas in origin, but are more recently known as a gypsy tribe of Muhammadans who ravaged India in large predatory gangs and gave rise to many wars. They have now adopted a settled life and are found engaged in agriculture and in the Government service, as in the Mysore Horse &c. They were returned at 3507 in 1871 and have increased to 5055 in 1881. Four-fifths of them are in the Mysore and Tumkur Districts.

The *Labbe* and *Mápille* are by origin descendants of intermarriage between foreign traders (Arabs and Persians) and women of the country, but the same designations were taken by the children of those forcibly converted to Islam in the persecutions of Tipu Sultan's time. The Mápille belong to the Malabar coast, and the Labbe to the Coromandal coast, the principal seat of the latter being at Negapatam. They mostly visit the country temporarily for purposes of trade, hence there is a large preponderance of males over females. The two classes together were 2587 in 1871, while in 1881 they are 5038 or nearly double in number, of whom 4656 are Labbe and only 385 Mápille. More than half the former are in Mysore District and a good number in Bangalore District. The Mápille are most numerous in Kadur, Shimoga and Hassan Districts. There are none in Bangalore, Kolar or Chitaldroog.

The *Kandaháris* and other Afghans and foreigners are most numerous in Bangalore and Shimoga Districts. They principally visit the country as horse dealers, and traders in cloth, and may be met travelling in the Districts with ponies or horses for sale.

Kannada.—The language of Mysore is Kannada, the Karnátaka of Sanskrit literature and the Canarese of European works. It is one of the South Indian languages which are known as the Dravidian family, and may be roughly described as spoken through all the region comprised within the parallels of 74°30 to 78° east longitude and 14° to 18° north latitude. This includes the west of the Nizam's Dominions, the south of the Bombay Presidency, Mysore and Coorg, and the Madras districts which border these on the north, west and south. The Kannada character is the same as the Telugu, and Karnataka seems to have been a generic term which formerly included both. There is an extensive literature in the Kannada, going back to great antiquity. Down to about A. D. 1300 the language was cultivated entirely by the Jains; from that period to A. D. 1500 the Lingáyits continued its use in literature, and thenceforward Brahmans and other sects took part in its cultivation. The proportion of those who speak Kannada to the whole population is 73·94 per cent.

It may be interesting here to note the actual numbers throughout India of those speaking Kannada as returned in the various Census Reports.

Mysore ..	.. 3,095,647
Bombay ..	.. 2,600,160
Madras ..	.. 1,300,555
Nizam's Dominions	...1,238,519
Coorg ..	.. 92,079
Central Provinces ..	.. 4,766
Cochin ..	.. 2,369
Berar ..	.. 1,487
Bengal ..	.. 134
Panjab ..	.. 6 8
North West Provinces	.. 13
Central India ..	.. 1
British Burma ..	.. 5
French Territories ..	.. 56
Total	..8,335,859

To these figures must be added the numbers for Travancore and the Portuguese territories. The various dialects of Kannada are further spoken by nearly half a million more.

Telugu, the Andhra of Sanskrit literature, is a cognate member with Kannada of the South Indian languages known as the Dravidian family. It has been described by Europeans as "the Italian of the East." In the Mysore country it is the native language of the north eastern portions, included in the Kolar, Bangalore, and Chitaldroog Districts, but it is also largely spoken in all the other Districts, especially Tumkur. Many of the popular songs are in this language, which peculiarly lends itself to facile utterance in music. Telugu is spoken by 15·22 per cent of the population.

Tamil, the Drávida of Sanskrit literature, is called *Arava* by the people of Mysore: the origin of this term is unknown, but it is considered to mean "ill sounding." This is also one of the Dravidian family of South Indian languages. It is written in a different character from Kannada and Telugu, and is principally spoken in the east and south, particularly by the large body of camp followers, domestic servants, and traders in European goods in the Bangalore Cantonment. It is also the language of the Mudaliyar and Pille, the Tigala, and of the Srivaishnava Brahmans. The proportion of the population speaking Tamil is 3·12 per cent.

Tulu, the original language of Tuluva, the modern district of South Kanara, is considered to be a dialect of Kannada and is written in the Kannada character; though a form of Grantha employed by the Tulu Brahmans in copying Sanskrit works is sometimes called the Tulu character. Tulu is spoken almost exclusively in the Kadur and Shimoga Districts, and used by only 0·21 per cent of the population.

T

Malayalam is another member of the Dravidian family of languages, and is closely allied to Tamil, though written in a character of its own. It is the native language of Malabar, and in Mysore is spoken chiefly in Shimoga, Hassan and Kadur Districts, probably by labourers in coffee estates and on public works.

Kodagu, the language of the Coorgs, is a dialect of Kannada, and written in the Kannada character. Its use in Mysore is almost confined to a few youths who have come to Bangalore for their education.

Hindustani, in the form distinguished as *Dakhani*, is the language of all the Muhammadans, and is also known by most of the employés in military and cutcherry departments. It is spoken by 5·52 per cent of the population.

Mahratti, or *Hindvi* as it was also called, was once the official language of Mysore. It is still spoken by many classes besides that of the Mahrattas, such as the Deshasta Brahmans, the Darjis, &c. Its use is most prevalent in Bangalore, Shimoga and Mysore Districts. The proportion of Mahratti speaking people to the whole population is 1·62 per cent.

Konkani is the language of the Konkan. Though there are some who speak it in every District, its use is mostly confined to Shimoga District.

Gujaráti, *Sindi*, *Panjábi* and *Bengáli* are spoken by a few strangers who have come to the country for trading or other purposes.

Persian is spoken only in Bangalore, where there are some horse dealers and others, natives of Persia.

Pashtu is spoken by Afghans who visit the country with horses and ponies for sale and take them about for this purpose to different parts. *Bilúchi* by a couple of strangers in Bangalore.

Arabic is spoken in Bangalore and in Kadur District; at the latter in the Baba Budan mountains, where there is a Muhammadan religious establishment.

Chinese has four representatives and *Burmese* one.

Owing to the great admixture of languages in the country it is no uncommon thing to find men in every class able to converse with ease in four or five different languages.

European languages.—As regards the European languages seven-eighths of those speaking English are in Bangalore, and of those talking the other languages almost the whole. English is the language of 0·19 per cent of the population. Its use is undoubtedly spreading among the educated classes of the native population.

DISTRIBUTION OF THE POPULATION BY BIRTH-PLACE.

FINAL CENSUS FORMS X AND XI.

Summary.—The following is a summary of the returns of the population distributed according to birth-place :—

Birth place.	Males.	Females.	Total.	Per cent.
Born in Asia.				
In the Mysore Province	1,992,482	2,019,229	4,011,711	95·83
„ other parts of India	90,679	80,450	171,129	4·08
„ „ Asia	185	61	246	...
Total.....	2,083,346	2,099,740	4,183,086	99·92
Born in Europe.				
In the British Isles	2,254	432	686	0·06
„ other parts of Europe	41	30	71	...
Total.....	2,295	462	2,757	0·06
Others.				
Born in Africa	11	14	25	
„ America	108	91	199	
„ Australasia	6	4	10	
„ at sea	3	4	7	
Not specified	73	31	104	
Total.....	201	144	345	0·008

Born in Mysore.—Of those born within the limits of the Province the following particulars are furnished. The first column shows the District of birth, the second the number censused in the District of birth, the remainder being in other Districts. The last column shows the percentage of the latter to those born in the District.

District.	Born in	Censused in	Remainder in other Districts.	Per-centage.
Bangalore...	626,477	589,041	39,436	6·27
Kolar	433,790	413,603	20,187	4·65
Tumkur	408,750	378,058	30,692	7·50
Mysore	902,220	874,945	27,275	3·02
Hassan	527,063	507,621	19,442	3·68
Shimoga	454,804	440,994	13,810	3·03
Kadur	299,345	289,253	10,092	3·37
Chitaldroog	357,172	331,300	15,872	4·44

It thus appears that the population of the Mysore and Shimoga Districts are the most stay-at-home, which is no doubt greatly due to the fertility of those Districts, arising from the streams and irrigation channels in the former and the natural advantages of the latter. Tumkur and Bangalore Districts, on the other hand, are those whose population have migrated the most from home.

Born in India.—Of those born in other parts of India, the following details are instructive, relating only to those that exceed 1000 :—

Born in		Censused in	
Madras Presidency	140,021	Bangalore District	36,170
		Kolar „	27,657
		Chitaldroog „	27,277
		Shimoga „	17,046
		Other Districts	31,871
Bombay Presidency	23,410	Shimoga District	16,980
		Chitaldroog „	2,910
		Other Districts	3,520
Nizam's Dominions	3,193	Bangalore District	2,491
Central Provinces	1,063	Do	957

British born.—The following are the particulars of the British-born population, nearly all of whom are in Bangaloro, except those entered as born in Great Britain (possibly the Isle of Man), who are all in Mysore. The British-born form 53·36 per cent of the European British subjects : but the ratio for males is 67·62 per cent, while for females it is only 25·41.

Born in	Males.	Females.	Total.	Per cent.
England	1,787	278	2,065	76·88
Wales	14	0	14	·52
Scotland	107	28	135	5·02
Ireland	331	117	448	16·67
Great Britain	15	9	24	·89
Total...	2,254	432	2,686

DISTRIBUTION OF THE POPULATION BY OCCUPATION.

FINAL CENSUS FORM XII.

Numbers under each Class.—The population are thus distributed according to occupation :—

Class.	Males.	Per cent.	Females.	Per cent.	Total	Per cent.
Professional	90,452	4·33	4,948	0·23	95,400	2·27
Domestic	15,223	0·72	9,333	0·44	24,556	0·58
Commercial	45,366	2·17	10,142	0·48	55,508	1·32
Agricultural...	1,008,826	48·37	599,809	28·55	1,608,635	38·42
Industrial	128,926	6·18	46,034	2·19	174,960	4·17
Indefinite and Non-Productive ...	797,049	38·22	1,430,080	68·08	2,227,129	53·20

Comparison with numbers in 1871.—The figures compare as follows with those for 1871, so far as the returns, which are not made up under precisely the same headings, admit of comparison :—

Class.	1871.	1881.	Difference.	Per cent.
Professional	146,011	95,400	— 50,611	— 34·66
Domestic	93,354	24,556	— 68,798	— 73·69
Commercial	22,254	55,508	+ 33,254	+ 149·42
Agricultural	1,345,630	1,608,635	+ 263,005	+ 19·54
Industrial	259,559	174,960	— 84,599	— 32·59
Indefinite and Non-productive	3,188,604	2,227,129	—961,475	— 30·12

It thus appears that the Commercial and Agricultural Classes have gained, the former immensely, and that all the others have lost, especially the Domestic Class. The Non-productive Classes are fewer by nearly a million, but this includes children, among whom the mortality caused by the famine must have been very great. The loss of one third of the Industrial Class is serious. But it is probable that many from this and the other productive classes have betaken themselves to commerce and agriculture, the gain under these two heads being 296,259 against a loss of 204,008 under the others. To make up the difference of 92,251, it is not unlikely that the non-productive class have to this extent been forced into the same productive ranks. If then the numbers of those dependent on others have been reduced in order to add to those who rely on self exertion the country may be no loser.

Males and Females.—A further sub-division shows what numbers of either sex pursue the occupations of these several Classes in towns and in villages respectively. It thus appears that there is a larger proportion of females in towns to the total female population than of males in towns to the total male population.

Urban and Rural Population.—Also we incidently obtain from this statement the ratios of the urban and rural population, the former being 8·34 per cent, the latter 91·65. The following are the details :—

Class.	Males.		Females.		Totals.	
	In towns.	In villages.	In towns.	In villages.	In towns	In villages.
Professional	21,961	68,491	1,335	3,613	23,296	72,104
Domestic	7,682	7,541	2,683	6,650	10,365	14,191
Commercial	12,310	33,056	1,831	8,311	14,141	41,367
Agricultural	17,669	991,157	5,170	594,639	22,839	1,585,796
Industrial	24,818	104,108	13,085	32,949	37,903	137,057
Indefinite and Non Productive ...	87,123	709,926	153,695	1,276,585	240,818	1,986,311
Total.....	171,563	1,914,279	177,799	1,922,547	349,362	3,836,826
Per cent.....	8·22	91·78	8·46	91·54	8·34	91·65

All use subject to https://about.jstor.org/terms

Professional Class.—Under this class are included three orders, the figures relating to which may be summarised as follows:—

Engaged in	Males	Females	Total
Government service	65,015	3,057	68,072
Army ..	8,883	0	8,883
Learned Professions ..	16,554	1,891	18,445

Learned professions.—The members of the learned professions included in the third order are the following:—

Engaged in	Males	Females	Total
Religion ..	9,833	309	10,142
Law ..	390	0	390
Medicine ..	982	129	1,111
Literature ..	15	0	15
Painting &c. ..	316	34	350
Music ..	1,898	32	1,930
The stage ..	1,076	1,293	2,369
Education ..	2,044	94	2,138

The ministers of religion are most numerous in the Tumkur and Mysore Districts, but the female ministrants preponderate in Shimoga District. There appear to be 95 Christian ministers, priests and missionaries, 2,981 Hindu priests, and 189 Muhammadan priests. Of the authors, 4 are in the Town of Bangalore, 6 in villages of the Kolar District, and 5 in villages of the Mysore District. Musicians specially favour the Shimoga District.

Domestic Class.—Of the two orders forming this Class, the one headed Wives is blank. The other order has the following sub-divisions:—

Engaged in	Males	Females	Total
Boarding and Lodging ..	94	20	114
Domestic service ..	15,129	9,313	24,442

By far the greater number belong to the Town and Cantonment of Bangalore.

Commercial Class.—The first order under this Class includes merchants, bankers, brokers, traders &c., and is thus sub-divided:—

Engaged as	Males	Females	Total
Merchants ..	2,961	128	3,089
General dealers ..	34,392	9,495	43,887

Their distribution in towns and villages is as follows:—

	Merchants.		*General dealers.*	
	Male	Female	Male	Female
In towns ..	1,768	49	8,497	1,764
In villages ..	1,193	79	25,895	7,731

Distribution of first order.—It has already been seen that the Commercial Class as a whole has increased nearly 150 per cent between 1871 and 1881. The following is a comparative statement by Districts of the distribution of the important first order included in that class, namely, persons who buy or sell, keep or lend money, houses or goods of various kinds.

District.	1871.	1881.	Increase.	Per cent.
Bangalore	3,942	11,139	7,197	182·5
Kolar	3,041	7,404	4,363	143·4
Tumkur	1,712	4,999	3,287	191·9
Mysore	2,108	7,663	5,555	263·5
Hassan	1,008	3,056	2,048	203·1
Shimoga	1,024	5,697	4,673	456·3
Kadur	774	3,381	2,607	336·8
Chitaldroog	1,234	3,637	2,403	294·7
Total.....	14,843	46,976	32,133	216·4

This content downloaded from

All use subject to https://about.jstor.org/terms

The figures are very remarkable, and if those of the former Census included precisely all the same heads as those of 1881, the result is to show a very unusual development in the direction of commerce. The returns furnish no clue to the particular branch of commerce or merchandize which has caused this effect, but there is no reason to doubt that transactions in food grains in particular must have received a great stimulus from the necessities of the country during the famine, and the excellent harvests which succeeded may have helped to perpetuate the profits of the trade. No new communications of great consequence by rail or road had been opened up between 1871 and 1881 for the transport of goods, though the roads completed through the Malnad of the Kadur District, previously inaccessible to wheeled traffic, may besupposed to have had some effect. It is not known that the war in Afghanistan affected the grain market in Mysore, nor that wheat cultivation for export has received much extension, Mysore being only in a small degree a wheat country. The causes of the progress in commerce indicated by the Census figures must therefore remain for the present a question demanding more investigation than the data at hand suffice fully to explain.

Carriers.—The second order includes persons engaged in the conveyance of men, animals, goods and messages. Though 6 sub-orders are enumerated, the heads "engaged in storage" and "messengers and porters" are blank. There is one single man in Bangalore returned as a carrier on seas and rivers, and 167 in Mysore, Kadur and Shimoga Districts are set down as carriers on canals and rivers. The remaining 2 sub-orders yield the following figures :—

	Male	Female	Total
Carriers on Railways	342	0	342
,, Roads	7,503	519	8,022

Comparison with 1871.—The entire number given in 1871 of persons engaged in conveyance of persons and goods was 7,411, while in 1881 it was 8,532; an increase of 15·12 per cent has thus taken place. But the figures it seems to me very inadequately represent the state of the case. The statistics of General Labourers probably include a large number who might have come here, and there are probably not a very greatly larger proportion actually engaged in the transport of persons, animals and goods to the exclusion of other callings, under which therefore they must have returned themselves. The number in towns is 2,063, of whom 1,187 are in Bangalore. Those in villages are 6,469, the greater number in Shimoga and Kadur Districts.

Agricultural Class.—This is by far the most numerous class of the population, representing nearly 38½ per cent of the whole. Since 1871 it appears to have increased by nearly 20 per cent, but this may be partly due to a more accurate classification. The following are the details :—

Persons engaged	1871	1881	Difference	Percentage
In agriculture	1,034,678	1,585,061	+550,383	+53·19
With animals	37,776	23574	—14,202	—37·50

Agriculturists.—The first of the two orders under this class includes persons possessing or working the land, and engaged in growing grain, fruits, grasses and other products. Although there are 3 sub-orders, two of them are blank, namely Arboriculturists and Horticulturists: persons pursuing these callings have doubtless been put among general cultivators. There remains the 1st sub-order, of Agriculturists, which, in round numbers, contains nearly a million of males and 600,000 females. Of the former, 17,000, and of the latter, 5,000 are in towns, the remainder being in villages. The following are the various heads under which they have been returned :—

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

Agriculturists.	Males.	Females.	Total.	Per cent.
Non cultivating landholders	35,432	19,937	55,369	3·48
Cultivating landholders	341,607	16,546	358,153	22·59
Farmers	67,468	5,757	73,225	4·61
Subordinate cultivators, comprising subordinate members of the families of land holders and cultivators, engaged in cultivation jointly with them	341,171	374,361	715,532	45·14
Agricultural Servants or Labourers, employed on wages by the year or for long periods for cultivation or for tending cattle ...	105,696	19,287	124,983	7·94
Agricultural Day Labourers, employed for occasional works	101,616	156,183	257,799	16·26
Total.....	992,990	592,071	1,585,061	...

Distribution in 1871 *and* 1881.—The distribution by Districts of Agriculturists, as distinct from Persons engaged about Animals, compares thus with the figures of 1871 :—

District.	1871.	1881.	Increase.	Per cent.
Bangalore	145,935	204,014	58,079	39·79
Kolar	132,872	210,197	77,325	58·19
Tumkur	131,769	190,150	58,381	44·30
Mysore	171,046	261,728	90,682	53·01
Hassan	141,793	241,579	99,786	70·30
Shimoga	128,617	202,114	73,497	57·14
Kadur	68,240	128,956	60,716	88·97
Chitaldroog	114,406	146,323	31,917	27·89

To what extent these figures may be adopted with reference to those of 1871 it is impossible to say. There seems at any rate no reason to doubt that the number of Agriculturists has increased absolutely, and therefore to some extent also relatively. The above table seems to indicate that the principal increase has been in Kadur and Hassan Districts, and in these, especially the former, it is a well known fact that coffee cultivation has been very greatly extended of late years.

Persons engaged with Animals.—The second order under the Agricultural Class includes Persons engaged about Animals. These are 23,574 in number, of whom 15,836 are males and 7,738 are females. Those in towns are only 450 of both sexes, the rest being in villages. Compared with the figures for 1871, there has been a decrease of 37½ per cent in the strength of this order. Whether the fall arises from the tremendous mortality among cattle during the famine years, or from difference in the system of returns, it is difficult to say. That the latter may be the true explanation will appear from the following details by Districts.

171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

District.	1871.	1881.	Difference.	Per cent.
Bangalore	2,542	371	— 2,171	— 85·40
Kolar	3,486	5,833	+ 2,347	+ 67·32
Tumkur	4,837	3,175	— 1,662	— 34·36
Mysore	9,180	489	— 8,691	— 94·67
Hassan	5,386	4,027	— 1,359	— 25·23
Shimoga	4,495	1,801	— 2,694	— 59·93
Kadur	2,766	3,506	+ 740	+ 26·75
Chitaldroog	5,084	4,372	— 712	— 14·00

Industrial Class—We now come to this all-important Class, in which the returns it is to be regretted show a decrease of 32½ per cent since 1871. The class includes 6 orders, under which the following are the details:—

Order.	Males		Females.		Total.	Per cent
	In towns.	In villages	In towns.	In villages.		
Persons engaged in Art and Mechanic productions ...	2,560	5,568	37	44	8,209	4·69
Persons working and dealing in Textile Fabrics and in Dress ...	11,385	47,280	6,591	20,034	85,290	48·74
in Food and Drinks	4,547	10,933	3,893	3,917	23,290	13·31
in Animal substances	559	3,598	31	113	4,301	2·45
in Vegetable substances ...	1,637	4,985	2,017	3,127	11,766	6·72
in Minerals	4,130	31,744	516	5,714	42,104	24·06
Total.....	24,818	104,108	13,085	32,949	174,960	

Distribution.—The following statement shows their distribution by Districts:—

Order.	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.
Persons engaged in Art and Mechanic productions ...	1,856	125	267	2,629	853	1,191	653	635
Persons working and dealing in Textile Fabrics and in Dress ...	24,484	10,067	9,556	13,005	6,810	5,418	3,656	12,294
in Food and Drinks	6,589	1,382	1,946	6,262	1,862	2,452	900	1,897
in Animal substances	804	302	73	376	67	0	91	2,673
in Vegetable substances	3,743	812	1,037	2,015	1,529	1,283	603	744
in Minerals	6,593	4,784	5,006	8,317	4,572	3,952	2,704	6,176

Comparison with 1871.—In the Census of 1871 the Industrial Class was returned under 4 heads, namely, persons employed in manufactures, in constructive art, miscellaneous artisans, and dealers. It is not easy therefore to make an inter-comparison between those 4 and the 6 of the present Census. The following statement however gives the totals of each Census by Districts:—

W

This content downloaded from 171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

District.	1871.	1881.	Decrease.	Per cent.
Bangalore	51,490	44,069	7,421	14·41
Kolar	27,428	17,472	9,956	36·29
Tumkur	29,304	17,885	11,419	38·96
Mysore	50,027	32,604	17,423	34·82
Hassan	23,660	15,693	7,967	33·67
Shimoga	22,307	14,296	8,011	35·91
Kadur	13,640	8,607	5,033	36·89
Chitaldroog	41,703	24,419	17,284	41·44

These figures show a very generally uniform decline in the numbers engaged in Industrial occupations, except in the Bangalore District, where the diminution is much less.

Branches of work.—There are 8,128 males and only 81 females returned as persons engaged in art and mechanic productions. By far the most numerous sub-order, accounting for seven-eighths of the whole, is that of workers in houses and buildings. There are no females returned as such. Next in number is the sub-order of workers in books. These are also all males; and nearly confined to Bangalore. Workers in chemicals come next, of whom there are both males and females, mostly found in Bangalore. Then follow workers in furniture and workers in carriages. The following is a summary of the statistics arranged in numerical order:—

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Houses and Buildings ...	1,335	97	235	2,457	834	1,058	627	596	7,239
Books...	210	...	...	17	1	...	...	...	228
Chemicals	125	...	2	14	8	19	3	23	194
Furniture	40	5	...	10	10	42	10	3	120
Carriages	28	3	14	61	...	1	4	1	112
Carving and Figures ...	5	7	...	19	...	61	...	...	92
Harness	15	5	...	41	...	7	...	1	69
Machines and Tools ...	23	3	16	...	...	...	2	...	44
Arms	15	...	..	2	...	3	...	11	31

All use subject to https://about.jstor.org/terms

The only sub-orders which are blank are workers in surgical instruments and in ships. Of the 81 women engaged in the industries under this order, no less than 60 are workers in chemicals, and Chitaldroog District contains 22 of them to only 1 man. As workers in tackle for sports and games, there are 10 women, all in Bangalore Town, whereas there are only 3 men engaged in this occupation and those in Kadur District. The sandalwood carvers in Shimoga District are aided by 6 women. The only other occupation in which women are engaged under this order is as workers in prints and pictures, which calling is pursued by only 2 and those in Bangalore Town.

On the whole therefore the country appears decidedly weak in art and mechanic productions. The returns for 1871 are so differently made up that the details do not admit of comparison.

Workers in textile fabrics and dress.—The next Industrial order relates to persons working and dealing in textile fabrics and in dress, of whom there are 58,665 males and 26,625 females. About a fourth of the former and a third of the latter are in towns. The sub-order workers in mixed materials is blank, but the remaining 5 sub-orders show the following results, arranged in numerical order :—

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Cotton and Flax	14,528	3,662	3,440	5,495	2,544	1,378	1,544	4,768	37,359
Dress	7,096	4,648	4,136	5,694	3,167	3,598	1,607	4,345	34,291
Wool and Worsted... ...	959	1,438	1,793	993	769	342	465	2,717	9,476
Silk	1,571	117	37	342	258	16	29	435	2,805
Hemp and Fibrous materials ...	330	202	150	481	72	84	11	29	1,359
Total.....	24,484	10,067	9,556	13,005	6,810	5,418	3,656	12,294	85,290

In cotton and flax, in wool and worsted, and in hemp and fibrous materials, about one-third of the workers are females; in dress about one fourth. In silk the female workers exceed the males by 5 to 4.

Workers in food and drinks.—Persons working and dealing in food and drinks number 23,290, of whom 7,810 are females. The males are 4,547 in towns to 10,933 in villages, while the females are pretty equally divided between the two, being 3,893 in towns and 3,917 in villages. The following shows the distribution of the 3 sub-orders arranged according to total strength :—

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Drinks and Stimulants ...	1,669	724	1,191	2,257	1,324	400	670	1,246	9,541
Vegetable food	3,300	465	583	3,236	306	594	65	499	9,038
Animal food	1,620	193	172	769	232	1,398	175	152	4,711
Total.....	6,589	1,382	1,946	6,262	1,862	2,452	900	1,897	23,290

Little more than a seventh of the workers in drinks and stimulants, and about half the workers in animal food, are women. But as workers in vegetable food the women exceed the men by 5 to 4.

Workers in animal substances.—Persons working and dealing in animal substances number only 4,301, nearly the whole of whom, or 4,208, are engaged as workers in skins, feathers and quills, and 2,580 of these in Chitaldroog District. The males in this Industrial order are 4,157 and the females 144. The following statement shows the distribution of the 3 sub-orders :—

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Skins, feathers and quills ...	774	294	69	371	36	...	84	2,580	4,208
Grease, gut, bones, horns, ivory, whalebone and lac ...	24	4	4	2	30	...	6	8	78
Hair	6	4	...	3	1	...	1	...	15
Total.....	804	302	73	376	67	...	91	2,588	4,301

There are are 115 females working in skins, more than half of them in Chitaldroog District. Of the workers in grease, &c., 21 are females, of whom 14 are in Bangalore Town and 6 in Hassan District. The workers in hair include 8 women and 7 men, half the former being in Kolar District.

Workers in vegetable substances.—Persons working and dealing in vegetable substances are of course more numerous than those engaged with animal substances. There are 11,766 altogether, of whom 6,622 are males and 5,144 females. About one third of the men and two thirds of the women are in towns. Of the 5 sub-orders, that for workers in paper is blank: the remainder are distributed as follows, arranging them according to numbers.

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Bamboo, cane, rush, straw and leaves ...	2,162	359	323	812	526	841	444	306	5,773
Gum and resin	841	273	613	1,044	907	199	134	224	4,235
Wood	738	180	92	159	96	240	17	117	1,639
Bark and pith	2	...	9	...	...	3	8	97	119
Total.....	3,743	812	1,037	2,015	1,529	1,283	603	744	11,766

The females engaged as workers in bamboo, cane, rush, straw and leaves exceed the males in that occupation, the former being 3,295 and the latter 2,478. Nearly half the women, or 1,589, are in Bangalore District, of whom 1,335 are in the Town. Of persons working in gum and resin, the males are more than double the number of females. Of the workers in wood, about a third are females. Nearly a half the total number of persons occupied in this calling are in Bangalore District, mostly in the Town. There would seem however to be some difference in the way in which entries have been made under this sub-order in the different Districts. Thus in Kolar there are 180 males and no females occupied as workers in wood. In Mysore District, on the other hand, there are 139 women and only 20 men: of the latter only 1 is in the Town to 102 women. In Shimoga District again there are 180 women and only 60 men. In Kadur District there are no more altogether than 12 women and 5 men. Of the workers in bark and pith the number of females is 11.

Workers in minerals.—An important order follows, namely, that of persons working and dealing in minerals. There are 42,104 altogether, 35,784 males and 6,230 females. No workers appear of either sex in coal, in copper, in zinc, in lead and antimony. Moreover, as regards females, there are no workers in water; this does not of course refer to drawing and carrying water, so peculiarly the domestic duty of women in every part of the East. The following are the details of workers and dealers in minerals, arranged in numerical order:—

Workers in	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Gold, Silver, and Precious stones.	2,137	1,226	1,393	2,632	1,554	1,412	756	910	12,020
Earthenware	1,425	940	941	2,864	1,322	986	721	1,278	10,477
Stone and Clay	1,196	1,458	742	1,224	658	577	617	1,626	8,098
Steel and Iron	938	651	638	880	585	631	315	732	5,370
Salt	128	101	817	256	34	31	64	1,098	2,529
Glass	376	132	184	81	89	87	95	370	1,414
Brass and Mixed metals ...	220	46	165	278	301	61	45	136	1,252
Water...	51	142	110	46	7	86	49	7	498
Tin and Quicksilver... ...	120	31	16	56	22	49	42	19	355
Miners	2	57	...	...	...	32	...	...	91
Total.....	6,593	4,784	5,006	8,317	4,572	3,952	2,704	6,176	42,104

Goldsmiths, silversmiths, and jewellers thus form the most numerous sub-orders, and this is not to be wondered at when it is considered that jewelry is the favourite form of investment for native wealth, so much so that even little children may commonly be seen laden with gold and silver ornaments, though in other respects in unadorned simplicity. The goldsmith moreover is a component part of the village corporation. Only 105 women are returned under this head. Next come the potters, providing what are necessities in every house. There are more women engaged in this calling than in any other mineral work, and they form one-third of the total. Of workers in stone and clay about one-sixth are women. In steel and iron works on the other hand there are only 111 females, being most numerous in Tumkur and Hassan Districts. Of the workers in salt one-fifth are women, and in glass works there are 520 women to 894 men. One of the principal branches of glass work is the making of bangles, which are universally worn by women, especially in the lower orders. Under the head of miners there are 59 men, nearly all in Kolar District, and 32 women, all in Shimoga District. The figures may refer to the gold mines now in operation near Uriga in Kolar District and near Honnali in Shimoga District, but it does not appear why the sexes should be divided as they are in the case of each of these.

Indefinite and Non-productive Class.—This class shows a diminution of 30·12 per cent on the total of 1871, and includes three orders as follows :—

	Males.	Females.	Total.
Labourers and others (branch of labour undefined)	54,092	72,844	126,936
Persons of rank or property not otherwise returned ..	138	76	214
Persons of no specified occupation ..	742,819	1,357,160	2,099,979
Total...	797,049	1,430,080	2,227,129

General Labourers.—Under the first order there are only 236 persons of indefinite occupation, all males, of whom 119 are in Bangalore District. The total therefore is almost entirely made up of General Labourers, the well known cooly class, represented by 53,856 males and 72,844 females. They are thus distributed :—

General Labourers.	Bangalore.	Kolar.	Tumkur.	Mysore.	Hassan.	Shimoga.	Kadur.	Chitaldroog.	Total.
Males	15,654	6,360	4,861	6,585	2,278	9,251	3,046	5,821	53,856
Females	22,245	10,044	9,101	8,107	2,820	7,519	3,150	9,858	72,844
Total.....	37,899	16,404	13,962	14,692	5,098	16,770	6,196	15,679	126,700
Percentage on population ...	5·66	3·55	3·37	1·62	0·95	3·35	1·88	4·17	3·02

Comparison with 1871.—On comparing these results with the figures for 1871, when the percentage of Labourers to the total population was 5·41, a very serious decrease appears, as the following statement will show:—

District.	1871.	1881.	Difference.	Per cent.
Bangalore	36,332	37,899	+1,567	+4·31
Kolar	27,025	16,404	—10,621	—39·30
Tumkur	27,308	13,962	—13,346	—48·87
Mysore	59,356	14,692	—44,664	—75·71
Hassan	34,528	5,098	—29,430	—85·22
Shimoga	27,298	16,770	—10,528	—38·56
Kadur	23,686	6,196	—17,490	—73·84
Chitaldroog	37,643	15,679	—21,964	—58·34
Total.....	273,176	126,700	—146,476	—53·61

These statistics present so great a divergence that it is difficult to believe they include precisely the same classes of the population. Some loss is no doubt due to the famine, and perhaps the month in which the Census was taken may account for some difference, the Census of 1871 having been taken in November when the large bodies of coolies who emigrate to the Coffee districts would hardly have all left, while the Census of 1881 was taken in February, a time when they would all be absent from the country. Still these considerations do not seem sufficient to account for the great differences. Perhaps therefore some of those put under Labourers in 1871 have in 1881 found a place under the Agricultural Class, which has increased by 19½ per cent since the last Census and in which are included 257,799 Day Labourers.

Persons of rank and property.—Persons of rank and property not returned under any office or occupation number 214. The following is their distribution:—

District	Males	Females	Total
Bangalore ..	79	65	144
Kolar ..	13	3	16
Tumkur ..	39	8	47
Mysore ..	4	..	4
Kadur ..	3	..	3

There are none in the other Districts.

The Unoccupied.—Persons of no specified occupation, returned at over 2 millions, include apparently prisoners, of whom there were 1,210 male and 60 female. They also include beggars, gipsies and vagrants, to the number of 22,126 males and 13,765 females, as well as 2,402 prostitutes, of whom one is actually under 14. The figures further include all children. But the succeeding form (XII c) enables us to ascertain exactly how many of these are unoccupied as distinguished from adults. Hence it appears that the actual number of an age to work who have no occupation is about ¾ of a million, or 18·05 per cent of the total population, and that there are 6 times as many women as men without occupation. The following are the figures:—

Unoccupied.	Males	Females	Total
Total	742,819	1,357,160	2,099,979
14 and under	636,650	707,376	1,344,026
Remainder	106,169	649,784	755,953
Per cent of population	5·08	30·93	18·05

The Occupied, by religion.—The Occupation tables also furnish details for each religion and for either sex of ages below and above 14. As regards the main religious divisions the following figures show the total number under each possessed of any occupation, and the percentage to the total of the same sex and faith.

Religion.	Male.	Per cent.	Female.	Per cent.	Total.	Per cent.
Hindus	1,275,386	64·81	728,654	36·64	2,004,040	50·67
Muhammadans ...	58,920	57·41	11,849	12·10	70,769	35·29
Christians	8,559	55·75	1,601	11·51	10,160	34·73
Others	20	38·46	9	13·43	29	24·36
Total.....	1,342,885	64·38	742,113	35·33	2,084,998	49·80

The extent to which the Occupied belonging to each religion fall under the respective Classes of work may be thus shown:—

Class.	Hindus.		Muhammadans.		Christians.		Others.	
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
Professional ...	78,268	4,777	8,504	74	3,670	97	10	...
Domestic ...	11,145	8,075	2,599	595	1,479	662	...	1
Commercial ..	37,785	9,684	7,385	476	192	42	4	...
Agricultural ..	979,481	592,782	27,274	6,043	2,067	976	4	8
Industrial ...	121,074	44,067	7,239	1,625	612	342	1	...
Indefinite and Non-productive ...	740,061	1,329,187	49,625	89,045	6,718	11,780	33	58

Persons in civil employ.—The first order under the Professional Class includes all persons in the civil employ of Government. It is of interest therefore to see in what proportion the members of the different religions and their sub-divisions are so engaged. The following are the returns, with the percentage to the total of each group of the same sex:—

This content downloaded from

All use subject to https://about.jstor.org/terms

Religion.	Male.	Per cent.	Female.	Per cent.	Total.	Per cent.
Hindus						
Brahmans	1,962	2·39	21	·02	1,983	1·21
Kshattriyas, Vaishyas, and Superior castes	2,772	3·79	70	·10	2,842	1·99
Sudras	20,360	1·38	727	·04	21,087	·71
Outcastes, &c.	24,273	7·15	2,204	·64	26,477	3·88
Muhammadans	4,739	4·61	14	·01	4,753	2·37
Christians						
Europeans	221	6·46	1	·05	222	4·27
Eurasians	230	15·89	6	·37	236	7·76
Native Christians	452	4·31	14	·13	466	2·21
Others	6	11·53	...	...	6	5·04

Though the figures produce the foregoing results, it is difficult to believe that the number of Brahmans, for instance, in Government employ is less than 2,000. Many have therefore doubtless been returned under other heads of occupation. The large number of the lower orders, both male and female, occupied in the Government service refers to the kulavadi, toti, talvari, nirganti and such like members of the village corporation. Eurasian males in Government service are 15·89 of the total Eurasian males. This is a much higher rate than for any other section of the population, and must indicate that Eurasians so employed have, unlike the other classes, no second occupation under which they could find an entry.

Composition of the Army.—The Army is the next sub-order. There are of course no females under this head, but the males are drawn from various sections of the people to the following extent:—

		Total.	Per cent.
Hindus.—			
Brahmans	81		
Superior castes	991		
Sudras	1,181		
Outcastes &c.,	1,295		
		3,848	39·94
Muhammadans ...		2,863	32·23
Christians			
Europeans, &c.,	1,958		
Eurasians	51		
Native Christians	469		
		2,468	27·78
Others ...		4	·04

This content downloaded from

All use subject to https://about.jstor.org/terms

Government employ.—The civil and military employés of Government were not separately shown in 1871. Taking both together they compare as follows for 1871 and 1881:—

	1871		1881	
Hindus—				
Brahmans	13,161		2,064	
Superior castes	3,333		3,833	
Sudras	29,097		22,268	
Outcastes, &c.,	38,323		27,772	
		83,914		55,937
Muhammadans		8,899	... ...	7,616
Christians		3,145	... ...	3,392
Others		1	... ...	10
	Total.....	95,959	Total.....	66,955

These figures are instructive, but so far as they relate to Brahmans cannot possibly have been made up on the same principle. There must be many more than 2,000 Brahmans at present in Government employ, and they certainly have not surrendered 11,000 places in Government service since 1871. The discrepancy can only be explained by supposing that, in 1881, Brahmans combining other callings with Government service have been mostly returned under the former, such as landholders, &c.

Comparison of Classes for 1871 and 1881.—The succeeding statement compares at one view the numbers of the different sections of the people returned in 1871 and in 1881 as engaged in the respective Classes of Occupation there mentioned. Here again the same explanation must suffice. It is incredible that the Learned Professions have been abandoned to the extent indicated by these figures. Persons engaged in them therefore have probably been returned under other callings which they combined with the practice of the learned professions. Only the superior castes of Hindus show adherence to them, and they in spite of the general decline have increased to nearly treble under this head. The Domestic Class in 1881 compares no less unevenly with the same Class in 1871; but here, strange to say, it is the lower orders that have fallen off. Brahmans have more than doubled, while the superior castes of Hindus and the Christians have increased their numbers in domestic service. On passing to the Commercial Class we find the balance between the two periods of Census to a great extent redressed. The scale turns heavily in favour of 1881, and thus some indication is afforded as to the callings to which the population have betaken themselves in preference to Professional and Domestic occupations. The increase affects all divisions of the people but is most conspicuous among Sudras. The Agricultural Class still further restores the balance in favour of 1881, and all sections of the people are reported as more largely engaged in agriculture than 10 years ago. In the Industrial Class, however, and in the order of Labourers and others whose branch of labour is undefined, especially the latter, a great fall from the results of 1871 is again apparent. The only single increase under both heads is that of Christians engaged in Industrial occupations.

The Occupied under 14.—The number of persons engaged in the various Classes of Occupation who are under the age of 14 may be thus shown, with the percentage they bear to the whole number returned under each Class:—

Class.	Hindus.		Muhammadans.		Christians.		Others.		Total	Percentage to whole Class.
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.

Labourers ...	5,465	5,013	500	144	27	36	...	...	11,185	8·81
Total.....	126,964	62,118	3,891	783	476	151	1	...	194,384	9·31

Non-productive Class.—The above figures include only those who have an occupation of some sort. There are, besides, the Non-productive Class, namely, persons of rank and property without office or occupation, and persons of no specified occupation, including all children. The following statement relates to those of these two unoccupied classes who are under 14 years of age:—

Nondr oductive Class.	Hindus.		Muhammadans.		Christians.		Others.		Total.	Percentage to whole class.
	Male.	Female.	Male.	Female.	Male.	Female	Male.	Female.		
Persons of rank or property without occupation ...	5	3	...	1	...	...	...	...	9	4·20

DISTRIBUTION OF THE POPULATION ACCORDING TO EDUCATION.

FINAL CENSUS FORM XIII.

Totals.—The returns under this head may be summed up in the following figures:—

Divisions.	Males.	Per cent.	Females.	Per cent.	Total.	Per cent.
Under instruction ..	64,733	3·10	3,636	0·17	68,369	1·63
Not under instruction but able to read and write ..	169,965	8·15	5,446	0·26	175,411	4·19
Not under instruction and not able to read and write ..	1,851,144	88·75	2,091,264	99·57	3,942,408	94·18

If the proportion of children of school-going age be taken at 15 per cent, which is the generally received ratio, and the one that has been adopted by the Education Commission, there should be 312,876 boys and 315,051 girls, or 627,927 children altogether, of school-going age. On a comparison being made between the figures of this estimate and the returns of the Census above given, it appears that about 1 boy in 5 and 1 girl in 100 are receiving instruction.

Comparison with 1871.—These results bear very decided testimony to the spread of education since 1871. In the Census of that year the numbers of those able to read and write and those under instruction were given in one: by treating the figures for 1881 in the same way, we are enabled to make the following comparison.

Numbers able to read and write or under instruction.

Year.	Males.	Females.	Total.
1881	234,698	9,082	243,780
1871	201,754	5,011	206,765
Increase	32,944	4,071	37,015

In other words, notwithstanding that the total population has diminished in the ten years by 17·20 per cent, the numbers of those who are either instructed or under instruction have risen 18 per cent. In the case of males the increase has been 16·32 per cent, but in the case of females no less than 81·24 per cent.

By religions.—The details given for the three main religious sects exhibit the following results:—

Details.	Hindus.				Muhammadans.				Christians.			
	Males.	Per cent.	Females.	Per cent.	Males.	Per cent.	Females.	Per cent.	Males.	Per cent.	Females.	Per cent.
Under instruction ...	56,697	2·88	1,689	0·08	6,007	5·85	549	0·56	2,024	13·18	1,396	10·04
Not under instruction but able to read and write ...	149,845	7·61	1,706	0·08	14,303	13·93	1,239	1·26	5,799	37·78	2,492	17·93
Not under instruction and not able to read and write ...	1,761,272	89·50	1,985,127	99·83	82,316	80·21	96,070	98·17	7,527	49·03	10,011	72·02

This content downloaded from 171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00

According to this statement the Hindus, both male and female, are far behind Muhammadans in education, and of course much farther behind Christians. Some allowance must no doubt be made for the inclusion of all outcaste, wild and wandering tribes among the Hindus, otherwise it is difficult to explain why the results appear so unfavourable to them, as the value of education is fully admitted and understood and much effort made to obtain it on the part of Hindus.

Figures of 1871.—The percentage for the three religions in 1871 was as follows, compared with the similar estimate in 1881 :—

Percentage of those able to read and write or under instruction to total of the same religion and sex.

Year.	Hindus.		Muhammadans.		Christians.	
	Male.	Female.	Male.	Female.	Male.	Female.
1881	10·49	0·16	19·78	1·82	50·96	27·97
1871	7·47	0·06	12·67	0·89	42·35	20·67
Increase...	3·02	0·10	7·11	0·93	8·61	7·30

This statement makes it still more clear that the Hindus have not kept pace in education with those of the other religions. It also shows, notwithstanding all that has been done, what a mass of ignorance yet remains to be penetrated before the people of this country can be considered as in general possession of the merest rudiments of education.

By Districts.—It may be useful to give the ratios for 1881 by Districts.

Numbers in each District of those under instruction or able to read and write, and percentage to the total population of the same religion and sex in each District.

District.	Hindus.				Muhammadans.				Christians.			
	Male.	Per cent.	Female.	Per cent.	Male.	Percent.	Female.	Per cent.	Male.	Per cent.	Female.	Per cent.
Bangalore ...	39,562	13·52	1,031	0·34	7,140	25·42	746	2·71	5,857	56·88	3,076	31·97
Kolar ...	23,851	10·97	449	0·20	1,888	17·98	152	1·49	217	47·25	142	34·63

Shimoga ...	26,420	10·81	315	0·13	1,872	13·13	174	1·30	270	34·00	112	16·42
Kadur ...	16,953	10·52	176	0·11	1,394	18·35	82	1·33	307	35·40	58	15·34
Chitaldroog ...	20,769	11·35	257	0·14	1,167	16·38	65	0·99	41	61·16	18	23·67

By Classes.—By descending into more minute details, which with the help of the working registers is rendered possible, we obtain more complete and exact information as to the particular classes of the population that stand most in need of education, and the extent to which the several classes may be looked upon as instructed.

All use subject to https://about.jstor.org/terms

Percentage of Illiteracy.—From the foregoing returns it is easy to calculate the percentage under each class to the total of that class of either sex who, being of the age of 15 and above, are neither under instruction nor able to read and write. Those who are still returned as ignorant under that age it may reasonably be hoped will not in these days grow up to swell the number to any great extent.

Percentage of those aged 15 and above, who are neither under instruction nor able to read and write, to the total of the same class and sex.

	Males.	Females.
Hindus—		
Brahmans	9·36	66·92
Superior Castes	37·35	64·29
Sudras	56·84	63·17
Outcastes, &c.	61·73	63·08
Muhammadans	48·67	62·05
Christians—		
Europeans	2·81	1·52
Eurasians	2·41	9·85
Native Christians	35·73	54·37

These results do not work out exactly in accordance with popular opinion. For it is a surprise that Brahmani girls and women of 15 years of age and above should show a larger proportion of total ignorance than the girls and women of 15 and above in any other Hindu class, not to mention Muhammadans and Christians. This forms a standing reproach to the Brahmans, the pre-eminently learned class, as the above figures bear testimony with reference to males, and the class who are often the loudest advocates of female education. Again, it has been sometimes stated, and is matter of general supposition, that all the respectable classes acquire at least the rudiments of education as a matter of course; and hence it has been alleged that the efforts of Government to spread education merely displace a certain amount of indigenous instruction. The above figures give no support to such a theory, not even so much as might have been expected. The corollary is that the utmost efforts of Government agencies will not do too much.

It is to be regretted that the figures of 1871 are made up for age periods which cannot be brought into comparison with the foregoing, as it would have been interesting to see among what classes improvement in this respect is going on; for that it is going on among all, in a higher or lower degree, is matter of general experience.

STATISTICS OF INFIRMITIES.

FINAL CENSUS FORMS XIV TO XVII.

Totals in 1871 and 1881.—The subjoined comparative statement shows the somewhat remarkable result that the numbers afflicted with the Infirmities recognized in the Census—namely, unsoundness of mind, blindness, deaf-mutism, and leprosy—have diminished from 18,480 in 1871 to 7,836 in 1881, while the total at the latter period bears to the whole population of the country a ratio of only a half that of 1871. Whatever may be causes to which these favorable results are due, whether to an improvement in hygiene or to a larger acceptance of proper medical advice, the country is to be congratulated on so rapidly increasing an immunity from these mental and bodily infirmities.

Infirmities.	1871.			Percentage to total population.	1881.			Percentage to total population.
	Male.	Female.	Total.		Male.	Female.	Total.	
Of Unsound mind ...	1,546	1,434	2,980	·058	466	301	767	·018
Blind	3,923	2,010	7,933	·156	1,866	2,060	3,926	·093
Deaf-mutes	3,124	2,946	6,070	·120	1,426	1,184	2,610	·062
Lepers	912	585	1,497	·029	340	193	533	·012
Totals.....	9,505	8,975	18,480	·365	4,098	3,738	7,836	·187

The Insane.—Of the 767 persons *of unsound mind* (466 males and 301 females) there are some at all ages, but the majority, or nearly a half, are between the ages of 20 and 40, thus—

	Males.	Females.	Total.	
From above 20—30 ..	.. 105	.. 71	.. 176	
—40 ..	.. 121	.. 75	.. 196	372

By Districts Bangalore contains the most, or 252; then Shimoga 119; and Mysore 100. The fewest are in Hassan and Kadur, which have 45 and 44 respectively. But it is necessary to bear in mind that the only Lunatic Asylum is situated at Bangalore.

By religion 670 are Hindus, 75 Muhammadans and 21 Christians.

The Blind.—Among the *blind*, who are returned at 3,926, females preponderate, the males being 1,866 and females 2,060.

Excluding those over 60 years of age in both sexes, the highest number of males blind are of the age 20 to 30, of which period there are 285. Females who are blind are most numerous at a later age, namely 40 to 60. There are 300 of the ages 40 to 50, and 302 of the ages 50 to 60.

By religion 3745 are Hindus, 141 Muhammadans and 40 Christians.

Deaf mutes number 2,610, of whom 1,426 are males and 1,184 females. Mysore District contains the greatest number, or 452; Bangalore District follows with 415. The deaf-mutes are most numerous at the age 20 to 30 for both sexes. Between those ages the tables show 287 males and 217 females.

Of the 2,610 deaf-mutes no fewer than 2,500 are Hindus, only 90 being Muhammadans, and 20 Christians.

Lepers, that is, only such as are afflicted with the true eating leprosy, number 533, of whom 340 are males and 193 females. They are most numerous in Bangalore and Mysore Districts, in the former of which is the Leper Hospital.

The male lepers number most at the ages 40 to 50, at which there are 80, and at 30 to 40, at which there are 78. The female lepers are most numerous at the age 50 to 60, at which there are 56.

This content downloaded from
171.76.87.42 on Wed, 07 Feb 2024 08:22:19 +00:00
All use subject to https://about.jstor.org/terms

The lepers distributed according to religion are 485 Hindus, 34 Muhammadans and 14 Christians.

Government inquiry—On the question proposed by the Government of India, as to whether there is anything peculiar to the climate of Mysore or the habits of the people which favours the development of insanity, congenital blindness, deaf-mutism, or idiocy, I deemed it best to consult the Medical Department. Brigade Surgeon Houston, the Surgeon to the Mysore Government, has favoured me with the statement that neither himself nor Brigade Surgeon Henderson, Superintendent of the Central Jail, both of whom have spent many years in this Province, have observed anything peculiar to Mysore in the causes contributing to the infirmities in question.

Mr. Lincoln, Civil Surgeon of Hassan, while admitting that his experience in psychological medicine is very small, is disposed to attribute some amount of insanity to the intermarriage of near relatives, which is a compulsory obligation in several classes and castes.

VILLAGES AND TOWNS.

FINAL CENSUS FORM XVIII.

The number of towns and villages is returned as 17,655, which, compared with the 19,630 returned in 1871, shows a diminution of 1,975, or 10 per cent. The following are the details :—

With Number of Inhabitants	1871.	1881.	Difference.
Less than 200	11,935	11,496	— 439
200 — 500	5,540	4,592	— 948
500 — 1,000	1633	1,189	— 444
1,000 — 2,000	412	277	— 135
2,000 — 3,000	58	50	— 8
3,000 — 5,000	30	30	...
5,000 — 10,000	17	15	— 2
10,000 — 15,000	3	3	...
More than 50,000	2	3	+ 1

It thus appears that the principal decline has taken place in villages containing from 200 to 500 inhabitants, which show a loss of over 17 per cent. Of the remainder, the fall in large villages containing from 500 to 1000 inhabitants, and in the smallest villages containing less than 200, is nearly equal in numbers, and in each case less than half the loss in the number of villages of 200 to 500 inhabitants. But the percentage of decrease in the former is 3 and in the latter 27. The loss in considerable villages of 1000 to 2000 is 32 per cent, and in those still larger of from 2000 to 3,000 is more than 13 per cent.

Of the towns containing 5,000 to 10,000 inhabitants there are 2 less than in 1871. An examination of the lists shows that Haribar, Chitaldroog, Hosur, Closepet, Holo Narsipur, and Turvanur have dropped out of this class since 1871, and that Chikmagalur, Hunsur, Nanjangud and Chintamani have taken their place. Of the 3 towns with 10,000 to 15,000 inhabitants, Shimoga and Seringapatam retain the position they had in 1871, but Kolar has taken the place of Tumkur as a third.

The increase in towns of over 50,000 inhabitants is apparent and not real. It arises from reckoning Bangalore as 2, owing to the separation of the Town, or Bangalore proper, from the Civil and Military Station, which latter, on the rendition of the Mysore territory to Native rule, was formed into an Assigned Tract and continues under British administration.

In order to show what parts of the country have principally suffered the depopulation indicated by the loss of villages up to those containing 3,000 inhabitants, the following table has been drawn up by Districts.

District.	Less than 200.		200 to 500.		500 to 1,000.		1,000 to 2,000.		2,000 to 3,000	
	1871.	1881.	1871.	1881.	1871.	1881.	1871.	1881.	1871.	1881.
Bangalore	1,419	1,682	860	612	202	111	43	28	7	3
Kolar	1,965	2,348	750	529	147	78	39	20	4	3
Tumkur	1,469	1,693	738	474	212	100	49	109	7	4
Mysore	812	845	802	798	402	351	131	110	14	19
Hassan	2,039	2,198	956	709	161	88	25	20	6	6
Shimoga	2,080	1,099	532	626	175	205	34	34	6	7
Kadur	1,506	837	337	365	108	126	29	17	7	5
Chitaldroog	645	794	565	459	226	130	62	29	7	3

It would thus appear that the villages in Shimoga and Kadur Districts have become more populous, while those of all the other Districts have more or less fallen in the numbers of their inhabitants.

TOWNS OF MORE THAN 5,000 INHABITANTS.

FINAL CENSUS FORMS XIX & XX.

The total number in 1871 was 22, in 1881 it is 20, or by reckoning Bangalore as 2 towns, 21. It has already been stated which towns have dropped out of this class since 1871 and which have gained a place in it.

The following is the detailed distribution of them, counting Bangalore as 1.

District.	5,000 to 7,000.		7,000 to 10,000.		10,000 to 12,000.		55,000 to 60,000.		140,000 to 160,000		Total.	
	1871.	1881.	1871.	1881.	1871.	1881.	1871.	1881.	1871.	1881.	1871	1881
Bangalore ...	4	2	1	2	...	...	...	...	1	1	6	5
Kolar ...	1	2	3	1	...	1	...	...	...	...	4	4
Tumkur ...	...	...	...	1	1	...	...	...	...	...	1	1
Mysore ...	1	3	...	...	1	1	1	1	...	...	3	5
Hassan ...	2	1	...	...	...	...	...	...	...	...	2	1
Shimoga ...	...	...	...	...	1	1	...	...	...	...	1	1
Kadur ...	1	1	...	1	...	...	...	...	...	...	1	2
Chitaldroog ...	4	1	...	...	...	...	...	...	...	...	4	1
Total.....	13	10	4	5	3	3	1	1	1	1	22	20

Bangalore.—Bangalore, which in the Town and Cantonment had a population of 142,513 in 1871, has now increased its population to 155,857, a growth at the rate of 8½ per cent in the 10 years. By population therefore Bangalore holds rank as the 9th among the cities of India. Those which come before it in this respect are

Bombay	773,196
Calcutta	684,658
Madras	405,848
Lucknow	261,303
Benares	199,700
Delhi	173,393
Patna	170,654
Agra	160,203

Comparing it with cities of Europe and America, it would stand nearest to Oldham in England (152,511), Rotterdam in the Netherlands (157,270), or Buffalo in the United States (155,137).

The total population is distributed in the ratio of about three-fifths in the Civil and Military Station to two-fifths in the Town or Petta and its environs. The increase for the past 10 years has been at the rate of 12½ per cent in the Civil and Military Station and 2½ per cent in the Town. The female population has increased during the decade more rapidly than the male, the figures being 11·3 per cent for males and 13·7 for females in the Civil and Military Station, with 1·2 per cent for males and 3·2 for females in the Town.

The following is the statement by sects:—

	Hindus.	Muhammadans.	Christians.	Others.
1881	108,893	29,521	17,430	13
1871	105,617	21,587	15,294	15
Increase	3,276	7,934	2,136	..

From which we learn that the Muhammadans have added more to their numbers than both Hindus and Christians together. The Hindus are pretty equally distributed between the Civil and Military Station and the Town—56 thousand in the former to 52 in the latter—but the Muhammadans, and still more the Christians, vastly preponderate in the former.

Mysore.—Mysore is the second city in the country as regards its population, which has increased from 57,815 in 1871 to 60,292 in 1881, or at the rate of a little more than 4 per cent. The following are the details:—

	Hindus.	Muhammadans.	Christians.	Others.
1881	45,669	13,288	1,289	46
1871	43,905	12,883	990	37
Increase	1,764	405	299	9

In the Madras Presidency it is exceeded only by Trichinopoly and Madura, and in the Bombay Presidency only by Poona, Ahmedabad, and Surat, omitting of course the capitals.

Towns of 10,000 to 12,000.—These are Shimoga, Seringapatam and Kolar. The first has actually 12,040 inhabitants. Kolar has risen to this grade since 1871, taking the place of Tumkur, which then ranked above Shimoga but has now fallen below 10,000 in its population. The following details contain all the necessary information regarding the three towns:—

Town.	Hindus.		Muhammadans.		Christians.		Total.		Rate of increase per cent.
	1871	1881	1871	1881	1871	1881	1871	1881	
Shimoga ...	7,709	8,152	2,801	3,131	524	757	11,034	12,040	8·3
Seringapatam ..	8,817	9,789	1,639	1,768	138	177	10,594	11,734	9·7
Kolar ...	7,520	8,165	2,272	2,724	132	283	9,924	11,172	11·1

Towns of 7,000 to 10,000.—There are 5 towns of this size, namely Tumkur, Chik Ballapur, Channapatna, Chikmagalur, and Dod Ballapur. Of these, all but Chikmagalur have fallen in numbers since 1871. For some reason Channapatna was not entered among the towns by its own name at the last Census, but under that of one portion of it, Sukravarpete. But this, with Mangalavarpete and the Fort, constitute the municipal town of Channapatna, which is a place of some importance both historically and from its size, trade and situation.

The following statement shows the particulars of the 5 towns :—

Town.	Hindus.		Muhammadans.		Christians.		Total.		Difference per cent.
	1871	1881	1871	1881	1871	1881	1871	1881	
Tumkur	8,648	7,365	2,186	2,076	336	462	11,170	9,909	— 11·2
Chik Ballapur	9,157	8,306	649	781	76	46	9,882	9,133	— 7·5
Channapatna	5,576	5,514	3,310	3,353	10	18	8,896	8,885	— 0·1
Chikmagalur	3,755	4,948	583	1,943	125	197	4,463	7,088	+ 37·0
Dod Ballapur	6,610	6,197	839	831	0	4	7,449	7,032	— 5·6

The remarkable growth of Chikmagalur is no doubt to be attributed to the opening out of the Malnad country beyond by means of roads, and the development of coffee cultivation in those parts. The increase has been greatest among the Muhammadan residents.

Towns of 5,000 to 7000.—These are 10 in number, and the following details will show how they have risen or fallen in population since 1871. The towns which have dropped out of this grade since then are Harihar, Hole Narsipur, Chitaldroog, Hosur and Turvanur, while Hunsur, Nanjangud, and Chintamani have found a place in it.

Town.	Hindus.		Muhammadans.		Christians.		Total.		Difference per cent.
	1871	1881	1871	1881	1871	1881	1871	1881	
Davangeri ...	5,866	5,584	715	763	15	15	6,596	6,362	— 3·5
Anekal	6,164	5,425	394	486	54	84	6,612	5,995	— 9·3
Hassan	5,055	4,558	1,013	1,067	237	325	6,305	5,950	— 5·6
Sidlaghatta ...	6,207	5,062	802	740	0	2	7,009	5,804	— 17·1
Devanhalli ...	5,487	5,464	284	296	0	14	5,771	5,774	+ 0·05
Hunsur	3,056	3,934	1,156	1,592	81	144	4,293	5,670	+ 24·2
Tarikere ...	4,389	4,209	908	1,053	5	4	5,302	5,266	— 0·6
Nanjangud ...	4,371	4,680	383	521	0	1	4,754	5,202	+ 8·6
Chintamani ...	3,727	4,635	477	484	4	0	4,208	5,119	+ 17·7
Malvalli	4,624	4,511	489	561	1	6	5,114	5,078	— 0·7

Sidlaghatta and Chintamani are both flourishing towns in adjoining taluqs, and a transfer of population from the former would seem to have taken place to the latter. Hunsur is the head quarters of the Amrit Mahal and has also large coffee works, which, from the situation of the town at the junction of the roads from Coorg and the Western coast, attract a good deal of business. Nanjangud is a few miles south of Mysore, and has a richly endowed temple of Siva which draws devotees from all parts.

BANGALORE,
Xmas. 1883.

LEWIS RICE.

STATEMENT OF POPULATION

WITH REFERENCE TO LAND AND LAND REVENUE.

OLD CENSUS FORM IV.

Form modified.—This statement was directed to be prepared in the Old Census Form IV, slightly modified, as supplementary to the regular statistical tables. The modifications are the omission of 2 columns, headed respectively—total male agriculturists above 20 years of age, and average number of persons dependent on each male agriculturist above 20 years of age.

Comparison with 1871.—The following is a summary of the results, comparing the figures for 1881 with those for 1871.

		1871.	1881.	Difference.	Per cent.
Total population		5,055,412	4,186,188	−869,224	− 7·19
Total agricultural population		1,034,678	1,585,061	+550,383	+ 53·19
Area in square miles of land paying Government Revenue, quit-rent or peshkash.	Uncultivable.	4,650	12,177	+ 7,527	+161·87
	Cultivable...	679	5,491	+ 4,712	+693·96
	Cultivated...	7,175	6,236	− 839	− 11·60
	Total ...	12,505	23,904	+ 11,399	+ 91·00
Area in square miles of land not paying Government Revenue, quit-rent or peshkash ..		14,571	819	− 13,752	− 94·37
Total of both.....	Uncultivable.	15,026	12,177	− 2,849	− 18·96
	Cultivable...	3,940	5,491	+ 1,551	+ 39·36
	Cultivated...	8,111	7,055	− 1,056	− 13·01
	Total ...	27,077	24,723	− 2,354	− 8·69
Amount of payments to Government, whether as land revenue, quit-rent or peshkash, including, where such exist, water advantages, but not water rates. Rs.		71,33,579	68,11,568	− 3,22,011	− 4·51
Amount of local rates and cesses paid on land ...		3,07,664	5,62,558	+ 2,54,894	+ 82·93
Total of two preceding		74,41,243	73,74,126	− 67,117	− 0·90
Amount of rent, including local cesses, paid by cultivators		74,41,243	73,74,126	− 67,117	− 0·90
Percentage of agriculturists on total population.		20·5	37·86	+ 17·36	+ 84·68
Average number of acres cultivated by each male agriculturist above 20 years of age ...		7·5	5·07	− 2·43	− 32·40
Average incidence of amount of payments specified in column 16 per acre of revenue-paying culturable area		R.A.P. 1·6·8	R.A.P. 0·14·5	− R.A.P. 0·8·3	− 36·66
Average incidence of amount of payments specified in column 17 per acre of revenue-paying cultivated area		1·8·10	1·11·3	+ 0·2·5	+ 9·73
Average incidence of local rates and cesses per acre of cultivated land		0·0·11	0·1·11	+ 0·1·0	+ 109·09
Average incidence of rent paid per cultivated acre.		1·6·11	1·8·1	+ 0·1·2	+ 5·12

Differences.—It is evident from the foregoing figures that there are many discrepancies between the results obtained in 1871 and those of 1881. As regards the population, a decrease of 869,224, or 7·19 per cent on the total, is accompanied with an increase of 550,383, or 53·19 per cent on the agricultural population, and thus the percentage of agriculturists to the population stands at 37·86 per cent against only 20·5 per cent in 1871, an increase at the rate of 84·68 per cent.

In Area.—As regards area, the total extent of the country is corrected to 24,723 square miles, from 27,077, the area given in 1871, a decrease of 8·69 per cent. This of course affects all the areal calculations and prevents accurate comparison. But the following results are noteworthy. The area paying revenue to Government has nearly doubled, or risen from 12,505 square miles to 23,904, an increase of 91 per cent. The area not paying revenue to Government has coincidently been reduced from 14,571 square miles to only 819, or 94·37 per cent. These results may be due to the spread of coffee and cardamom cultivation, gold mining, &c., as well as to extension of the area placed under the Forest Department, and also to progress of the Revenue Survey, under which, if I am not mistaken, all land is brought to book as potentially revenue-paying. It is strange however, at the same time, that though there has been an increase of over half a million in agriculturists there has been a decrease of over 1,000 square miles in the area under cultivation. With more agriculturists and a smaller area under cultivation the average number of acres cultivated by each male agriculturist over 20 years of age is returned as 5·07 in 1881 against 7·5 in 1871.

In Amounts.—On comparing the amounts paid to Government on account of the land, there has been a decrease in the provincial land revenue of nearly 3¾ lakhs, but an increase in the revenue from local rates and cesses of over 2½ lakhs. The general result is a decrease, under both heads combined, of Rs. 67,117, which is less than 1 per cent. The increase in the amount raised from local rates may be explained perhaps by the progress of the Revenue Survey, under which the full local cesses are imposed on the surveyed Taluqs, whereas only provisional rates, which are considerably lower, are levied in unsurveyed Taluqs.

Incidence of Rates.—The average incidence of the general land revenue per acre of revenue-paying culturable (including both cultivable and cultivated) area has been reduced from Rs. 1—6—8 in 1871 to as. 14—5 p. in 1881, while that of local rates per acre of revenue-paying cultivated area has increased from Rs. 1—8—10 in 1871 to Rs. 1—11—3 in 1881. The average incidence of local rates and cesses per acre of cultivated land is thus a. 1—11 p. in 1881 against only 11 p. in 1871. Finally, the average incidence of rent paid per cultivated acre is Rs. 1—8—1 in 1881 against Rs. 1—6—11 in 1871, an increase of 5·12 per cent.

General result.—Altogether, it appears that a larger number of agriculturists cultivate a smaller area. The incidence of rent is higher per acre, but the total amount realized by Government is less. With reference to the land, therefore, neither Government nor agriculturists are so well off in 1881 as they were in 1871. But what Government has lost for the general revenues has been in great part transferred to local funds, the administration of which by local boards for local interests is now under consideration.

N. B.—I may here state that I am in no way responsible for the figures contained in this or any of the other Statistical Tables: they were compiled independently, and are nearly as furnished to me for incorporation in the Report.

(a) The figures in column 10 represent the total extent of sarvamánya lands and villages, the areas of cultivable and uncultivable lands not being ascertainable.

(b) The Districts being under rayatvári settlement, columns 18 and 19 are identical.
(c) Culturable includes both cultivable and cultivated.

ADDENDA.

Page 6, *para* 8.—It was thought, however, better to provide for the Preliminary Record in these cases also, that they might be examined by the Supervisors and any inaccuracies pointed out and corrected.

„ 29, „ 3.—A considerable migration took place from the districts allotted to the Nizam by the treaty of 1799 into Dod Ballapur and that neighbourhood, but nearly the whole of these persons gradually returned after the cession of those provinces to the Company. Many families which had emigrated to Baramahal in 1792 when it was ceded to the Company, now returned to Mysore. About 200,000 persons also emigrated temporarily from the Mahratta country into Mysore, to escape from the famine which prevailed there.

„ 55, „ 2.—There are also mentioned a Kandahari at Hole Narsipur, aged 103; and a Gangidikara Vakkaliga in Channaypatna taluq, aged 100.

„ 66, „ 2.—The Chitaldroog report notes a singular fact that some who call themselves Sádars, and therefore are included under the 2nd division of Hindus, follow the occupation of butchers.

„ 86, „ 2.—With regard to the labour question, the Shimoga report says— "Up to the famine there were in the interior of the Malnad those slaves called *huttál* (born servant) and *kondál* (bought servant) with many of the respectable ryots, but since then they have almost ceased to exist. Their masters, finding it difficult to maintain themselves during the famine, did not attempt to prevent them from leaving them, which they would not have certainly done if they could have helped it. These ryots have been often complaining to me that since these bondsmen left them, their agricultural operations have very much suffered, and they even asked me to help them in reclaiming some of them who still lived with the neighbouring Patels. Of course this help was denied to them, explaining the law on the subject to them.

ERRATA.

Final Census Form II, page 2, heading of columns 2, 5 and 8,
Omit or year of last Census.

Final Census Form VII, page 23, Christians, total of age 25—29,
For 865 *read* 1865.
